Manual for version 3.05 (2014/05/28)

If you have trouble printing this document, the reason is quite likely the cover page. Printing the pages starting with page 2 or page 3 should work.

The `tcolorbox` package

Manual for version 3.05 (2014/05/28)

Thomas F. Sturm[1]

Abstract

`tcolorbox` provides an environment for colored and framed text boxes with a heading line. Optionally, such a box can be split in an upper and a lower part. The package `tcolorbox` can be used for the setting of LaTeX examples where one part of the box displays the source code and the other part shows the output. Another common use case is the setting of theorems. The package supports saving and reuse of source code and text parts.

Contents

---

[1]Prof. Dr. Dr. Thomas F. Sturm, Institut für Mathematik und Informatik, Universität der Bundeswehr München, D-85577 Neubiberg, Germany; email: thomas.sturm@unibw.de

1 Introduction

The package originates from the first edition of my book « *L^AT_EX – Einführung in das Textsatzsystem* » [18] in about 2006. For the L^AT_EX examples and tutorials given there, I wanted to have accentuated and colored boxes to display source code and compiled text in combination. Since, in my opinion, this type of boxes is also quite useful to highlight definitions and theorems, I applied them for my lecture notes in mathematics [15–17] as well. With this package, you are invited to apply these boxes for similar projects.

Starting with version 2.00, for all internal calculations ε-T_EX [2] expressions are used in replacement of the package `calc` [20]. The breaking news for version 2.00 is the support for breakable boxes. This new feature allows new applications of the package without affecting the core package too much if you do not need boxes to break automatically. With version 2.20, the often requested 'side by side' mode for listings has been added. With version 3.00, boxed titles are introduced together with improved customization options for overlays, underlays, finishes, and own code extensions.

Since the first public release in 2011, I received a lot of feedback from all over the world. I want to thank all who wrote me for supporting this package by sending bug reports and ideas for new or better features.

1.1 Installation

Typically, `tcolorbox` will be installed as part of a major L^AT_EX distribution and there is nothing special to do for a user.

If you intend to make a local installation *by hand*, see the `README` file of the `tcolorbox` package for some hints. The short story is: you have to install not only `tcolorbox.sty`, but also all `*.code.tex` files in the local `texmf` tree.

1.2 Loading the Package

The base package `tcolorbox` loads the packages `pgf` [19], `verbatim` [14], `etoolbox` [7], and `environ` [12]. `tcolorbox` itself is loaded in the usual manner in the preamble:

```
\usepackage{tcolorbox}
```

The package takes option keys in the key-value syntax. Alternatively, you may use these keys later in the preamble with `\tcbuselibrary`$^{\rightarrow\,P.\,7}$ (see there). For example, the key to typeset listings is:

```
\usepackage[listings]{tcolorbox}
```

1.3 Libraries

The base package `tcolorbox` is extendable by program libraries. This is done by using option keys while loading the package or inside the preamble by applying the following macro with the same set of keys.

\tcbuselibrary{⟨*key list*⟩}

Loads the libraries given by the ⟨*key list*⟩.

```
\tcbuselibrary{listings,theorems}
```

The following keys are used inside \tcbuselibrary respectively \usepackage without the key tree path `/tcb/library/`.

/tcb/library/skins   (LIB skins)

Loads the package `tikz` [19] and provides additional styles (skins) for the appearance of the colored boxes; see Section 7 from page 93.

/tcb/library/listings   (LIB listings)

Loads the package `listings` [6] and provides additional macros for typesetting listings which are described in Section 9 from page 190.

/tcb/library/listingsutf8   (LIB listingsutf8)

Loads the packages `listings` [6] and `listingsutf8` [9] for UTF-8 support. This is a variant of the library LIB listings and is described in Section 9 from page 190.

/tcb/library/minted   (LIB minted)

Loads the package `minted` [13] to typeset listings with the `Pygments` [11] tool, also see Section 9 on page 190.

/tcb/library/theorems   (LIB theorems)

Provides additional macros for typesetting theorems which are described in Section 10 from page 222.

/tcb/library/breakable   (LIB breakable)

Provides support for automatic box breaking from one page to another; see Section 11 from page 244.

/tcb/library/fitting   (LIB fitting)

Provides support for font size adaption of the box content to the box dimensions; see Section 12 from page 260.

/tcb/library/hooks   (LIB hooks)

Extends several option keys to 'hookable' keys; see Section 13 from page 270.

/tcb/library/xparse   (LIB xparse)

Provides document command production with `xparse` for `tcolorbox`; see Section 14 from page 280.

/tcb/library/documentation   (LIB documentation)

Provides additional macros for typesetting LaTeX documentations which are described in Section 15 from page 293.
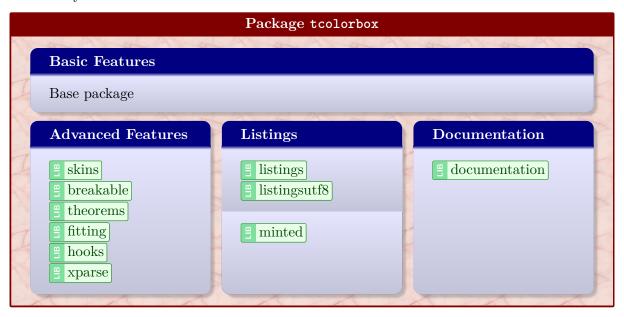

`/tcb/library/many` (style, no value)

Loads the libraries `LIB` skins, `LIB` breakable, `LIB` hooks, `LIB` theorems, `LIB` fitting, and `LIB` xparse. Use this shortcut, if you want to use all features of `tcolorbox` with exception of typesetting listings and using the specialized `LIB` documentation library.

`/tcb/library/most` (style, no value)

Loads all libraries except `LIB` minted and `LIB` documentation. Use this shortcut, if you want to use all features of `tcolorbox` with exception of using the `minted` package and using the specialized `LIB` documentation library.

`/tcb/library/all` (style, no value)

Loads all libraries. Use this shortcut only, if you indend to use the `LIB` documentation library.

2 Macros for Box Creation

\begin{**tcolorbox**}[⟨*options*⟩]
 ⟨*environment content*⟩
\end{**tcolorbox**}

This is the main environment to create an accentuated colored text box with rounded corners and, optionally, two parts. The appearance of this box is controlled by numerous options. In the most simple case the source code

```
\begin{tcolorbox}
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

creates the following compiled text box:

> This is a **tcolorbox**.

The text content of the box can be divided in an upper and a lower part by the command \tcblower. Visually, both parts are separated by a line. For example:

```
\begin{tcolorbox}
This is another \textbf{tcolorbox}.
\tcblower
Here, you see the lower part of the box.
\end{tcolorbox}
```

This code gives the following box:

> This is another **tcolorbox**.
> -
> Here, you see the lower part of the box.

The ⟨*options*⟩ control the appearance and several functions of the boxes, see Section 3 on page 14 for the complete list. A quick example is given here:

```
\begin{tcolorbox}[colback=red!5!white,colframe=red!75!black,title=My nice heading]
This is another \textbf{tcolorbox}.
\tcblower
Here, you see the lower part of the box.
\end{tcolorbox}
```

> **My nice heading**
>
> This is another **tcolorbox**.
> -
> Here, you see the lower part of the box.

\tcblower

Used inside tcolorbox to separate the upper box part from the optional lower box part. The upper and the lower part are treated as separate functional units. If you only want to draw a line, see \tcbline^{→ P. 145}.

\tcbset{⟨*options*⟩}

Sets options for every following `tcolorbox`[→P. 9] inside the current TeX group. By default, this does not apply to nested boxes, see Section 3.13 on page 66.
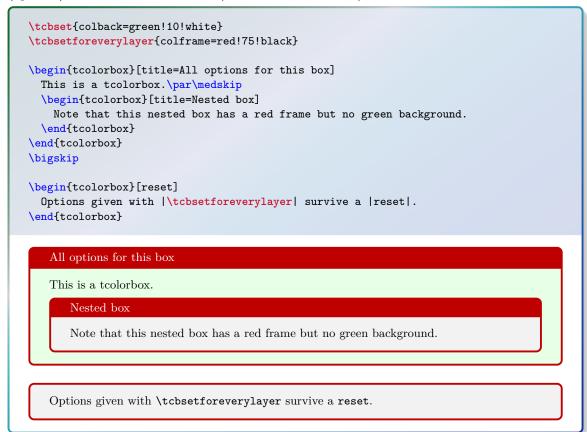

For example, the colors of the boxes may be defined for the whole document by this:

```
\tcbset{colback=red!5!white,colframe=red!75!black}
```

\tcbsetforeverylayer{⟨*options*⟩}

Sets options for every following `tcolorbox`[→P. 9] inside the current TeX group. In contrast to **\tcbset**, this does also apply to nested boxes, see Section 3.13 on page 66. Technically, the ⟨*options*⟩ are appended to the default values for every tcolorbox which are applied by `/tcb/reset`[→P. 74].

You should not use this macro, if you are not completely sure that you want to have the ⟨*options*⟩ also for boxes in boxes (in boxes in boxes . . .).

```
\tcbset{colback=green!10!white}
\tcbsetforeverylayer{colframe=red!75!black}

\begin{tcolorbox}[title=All options for this box]
  This is a tcolorbox.\par\medskip
  \begin{tcolorbox}[title=Nested box]
    Note that this nested box has a red frame but no green background.
  \end{tcolorbox}
\end{tcolorbox}
\bigskip

\begin{tcolorbox}[reset]
  Options given with |\tcbsetforeverylayer| survive a |reset|.
\end{tcolorbox}
```

> All options for this box
>
> This is a tcolorbox.
>
> > Nested box
> >
> > Note that this nested box has a red frame but no green background.

> Options given with **\tcbsetforeverylayer** survive a `reset`.

\tcbox[⟨*options*⟩]{⟨*box content*⟩}

Creates a colored box which is fitted to the width of the given ⟨*box content*⟩. In principal, most ⟨*options*⟩ for a `tcolorbox`[→P.9] can be used for **\tcbox** with some restrictions. A **\tcbox** cannot have a lower part and cannot be broken.

```
\tcbset{colframe=blue!50!black,colback=white,colupper=red!50!black,
        fonttitle=\bfseries,nobeforeafter,center title}

Text \tcbox[tcbox raise base]{Hello World}\hfill
%
\tcbox[left=0mm,right=0mm,top=0mm,bottom=0mm,boxsep=0mm,
  toptitle=0.5mm,bottomtitle=0.5mm,title=My table]{%
  \arrayrulecolor{blue!50!black}\renewcommand{\arraystretch}{1.2}%
  \begin{tabular}{r|c|l}
  One   & Two    & Three \\\hline\hline
  Men   & Mice   & Lions \\\hline
  Upper & Middle & Lower
  \end{tabular}}\hfill
%
\tcbox[colback=blue!85!black,
  left=0mm,right=0mm,top=0mm,bottom=0mm,boxsep=1mm,arc=0mm,boxrule=0.5pt,
  title=My picture]{%
  \includegraphics[width=5cm]{Basilica_5.png}}
```

```
% \usepackage{tikz}
\tcbset{colframe=blue!50!black,colback=white,colupper=red!50!black,
        fonttitle=\bfseries,center title}

% Fixed width box
\begin{tcolorbox}Hello\\World!\end{tcolorbox}

% Fitted width box (like hbox or makebox)
\tcbox{Hello\\World!}

% Fitted width box (using a \tikzname\  node)
\tcbox[tikznode]{Hello\\World!}
```

> See Section 14.2 on page 282 and Section 14.3 on page 285 for more elaborate methods to create new environments and commands.

\newtcolorbox[⟨*init options*⟩]{⟨*name*⟩}[⟨*number*⟩][⟨*default*⟩]{⟨*options*⟩}

Creates a new environment ⟨*name*⟩ based on `tcolorbox`→P.9. Basically, **\newtcolorbox** operates like **\newenvironment**. This means, the new environment ⟨*name*⟩ optionally takes ⟨*number*⟩ arguments, where ⟨*default*⟩ is the default value for the optional first argument. The ⟨*options*⟩ are given to the underlying `tcolorbox`. Note that `/tcb/savedelimiter`→P.18 is set to the given ⟨*name*⟩ automatically. The ⟨*init options*⟩ allow setting up automatic numbering, see Section 4 from page 75.

```
\newtcolorbox{mybox}{colback=red!5!white,
  colframe=red!75!black}

\begin{mybox}
This is my own box.
\end{mybox}
```

This is my own box.

```
\newtcolorbox{mybox}[1]{colback=red!5!white,
  colframe=red!75!black,fonttitle=\bfseries,
  title=#1}

\begin{mybox}{Hello there}
This is my own box with a mandatory title.
\end{mybox}
```

Hello there

This is my own box with a mandatory title.

```
\newtcolorbox{mybox}[2][]{colback=red!5!white,
  colframe=red!75!black,fonttitle=\bfseries,
  colbacktitle=red!85!black,enhanced,
attach boxed title to top center={yshift=-2mm},
  title=#2,#1}

\begin{mybox}[colback=yellow]{Hello there}
This is my own box with a mandatory title
and options.
\end{mybox}
```

Hello there

This is my own box with a mandatory title and options.

Definition in the preamble:

```
\newtcolorbox[auto counter,number within=section]{pabox}[2][]{%
  colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries,
  title=Examp.~\thetcbcounter: #2,#1}
```

```
\begin{pabox}[colback=yellow]{Hello there}
This is my own box with a mandatory
numbered title and options.
\end{pabox}
```

Examp. 2.1: Hello there

This is my own box with a mandatory numbered title and options.

\renewtcolorbox[⟨*init options*⟩]{⟨*name*⟩}[⟨*number*⟩][⟨*default*⟩]{⟨*options*⟩}

Operates like **\newtcolorbox**, but based on **\renewenvironment** instead of **\newenvironment**. An existing environment is redefined.

`\newtcbox`[⟨*init options*⟩]{\⟨*name*⟩}[⟨*number*⟩][⟨*default*⟩]{⟨*options*⟩}

Creates a new macro \⟨*name*⟩ based on `\tcbox`[→P.11]. Basically, `\newtcbox` operates like `\newcommand`. The new macro \⟨*name*⟩ optionally takes ⟨*number*⟩+1 arguments, where ⟨*default*⟩ is the default value for the optional first argument. The ⟨*options*⟩ are given to the underlying `tcbox`. The ⟨*init options*⟩ allow setting up automatic numbering, see Section 4 from page 75.

```
\newtcbox{\mybox}{colback=red!5!white,
  colframe=red!75!black}

\mybox{This is my own box.}
```
This is my own box.

```
\newtcbox{\mybox}[1]{colback=red!5!white,
  colframe=red!75!black,fonttitle=\bfseries,
  title=#1}

\mybox{Hello there}{This is my own box.}
```
Hello there

This is my own box.

```
\newtcbox{\mybox}[2][]{colback=red!5!white,
  colframe=red!75!black,fonttitle=\bfseries,
  title=#2,#1}

\mybox[colback=yellow]{Hello there}%
  {This is my own box.}
```
Hello there

This is my own box.

Definition in the preamble:
```
% counter from previous example
\newtcbox[use counter from=pabox]{\pbbox}[2][]{%
  colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries,
  title=(\thetcbcounter) #2,#1}
```

```
\pbbox[colback=yellow]{Hello there}%
  {This is my own box.}
```
(2.2) Hello there

This is my own box.

```
\newtcbox{\mybox}[1][red]{on line,
  arc=0pt,outer arc=0pt,colback=#1!10!white,colframe=#1!50!black,
  boxsep=0pt,left=1pt,right=1pt,top=2pt,bottom=2pt,
  boxrule=0pt,bottomrule=1pt,toprule=1pt}
\newtcbox{\xmybox}[1][red]{on line,
  arc=7pt,colback=#1!10!white,colframe=#1!50!black,
  before upper={\rule[-3pt]{0pt}{10pt}},boxrule=1pt,
  boxsep=0pt,left=6pt,right=6pt,top=2pt,bottom=2pt}

The \mybox[green]{quick} brown \mybox{fox} \mybox[blue]{jumps} over the
\mybox[green]{lazy} \mybox{dog}.\par
The \xmybox[green]{quick} brown \xmybox{fox} \xmybox[blue]{jumps} over the
\xmybox[green]{lazy} \xmybox{dog}.
```
The quick brown fox jumps over the lazy dog.
The (quick) brown (fox) (jumps) over the (lazy) (dog).

`\renewtcbox`[⟨*init options*⟩]{\⟨*name*⟩}[⟨*number*⟩][⟨*default*⟩]{⟨*options*⟩}

Operates like `\newtcbox`, but based on `\renewcommand` instead of `\newcommand`. An existing macro is redefined.

3 Option Keys

For the ⟨*options*⟩ in `tcolorbox`→P.9 respectively `\tcbset`→P.10 the following `pgf` keys can be applied. The key tree path `/tcb/` is not to be used inside these macros. It is easy to add your own style keys using the syntax for `pgf` keys, see [18, 19] or the examples starting from page 209.

3.1 Title

`/tcb/title`=⟨*text*⟩ (no default, initially empty)

Creates a heading line with ⟨*text*⟩ as content.

```
\begin{tcolorbox}[title=My heading line]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> **My heading line**
>
> This is a **tcolorbox**.

`/tcb/notitle` (no value, initially set)

Removes the title line if set before.

`/tcb/adjusted title`=⟨*text*⟩ (style, no default, initially unset)

Creates a heading line with ⟨*text*⟩ as content. The minimal height of this line is adjusted to fit the text given by `/tcb/adjust text`. This option makes sense for single line headings if boxes are set side by side with equal height. Note that it is very easy to trick this adjustment.

```
\tcbset{colback=White,arc=0mm,width=(\linewidth-4pt)/4,
equal height group=AT,before=,after=\hfill,fonttitle=\bfseries}

The following titles are not adjusted:\\
\foreach \n in {xxx,ggg,AAA,\"Agypten}
{\begin{tcolorbox}[title=\n,colframe=red!75!black]
  Some content.\end{tcolorbox}}
Now, we try again with adjusted titles:\\
\foreach \n in {xxx,ggg,AAA,\"Agypten}
{\begin{tcolorbox}[adjusted title=\n,colframe=blue!75!black]
  Some content.\end{tcolorbox}}
```

The following titles are not adjusted:

xxx	**ggg**	**AAA**	**Ägypten**
Some content.	Some content.	Some content.	Some content.

Now, we try again with adjusted titles:

xxx	**ggg**	**AAA**	**Ägypten**
Some content.	Some content.	Some content.	Some content.

`/tcb/adjust text`=⟨*text*⟩ (no default, initially Äpgjy)

This sets the reference text for `/tcb/adjusted title`. If your texts never exceed 'Äpgjy' in depth and height you don't need to care about this option.

/tcb/detach title (no value)

Detaches the title from its normal position. The text of the title is stored into `\tcbtitletext` and the formatted title is available by `\tcbtitle`. The main application is to move the title from its usual place to another one.

```
\newtcolorbox{mybox}[2][]{colbacktitle=red!10!white,
  colback=blue!10!white,coltitle=red!70!black,
  title={#2},fonttitle=\bfseries,#1}

\begin{mybox}{My title}
  This is a \textbf{tcolorbox}.
\end{mybox}
\begin{mybox}[detach title,before upper={\tcbtitle\quad}]{My title}
  This is a \textbf{tcolorbox}.
\end{mybox}
\begin{mybox}[detach title,after upper={\par\hfill\tcbtitle}]{My title}
  This is a \textbf{tcolorbox}.
\end{mybox}
```

> **My title**
>
> This is a **tcolorbox**.

> **My title**   This is a **tcolorbox**.

> This is a **tcolorbox**.
>   **My title**

/tcb/attach title (no value)

Attaches the title to its normal position. This option is used to reverse `/tcb/detach title`.

/tcb/attach title to upper=⟨*text*⟩ (style, default empty, initially unset)

Attaches the title to the begin of the upper part of the box content. The optional ⟨*text*⟩ is set between the formatted title and the box content.

```
\newtcolorbox{mybox}[2][]{colbacktitle=red!10!white,
  colback=blue!10!white,coltitle=red!70!black,
  title={#2},fonttitle=\bfseries,#1}

\begin{mybox}[attach title to upper={\ ---\ }]{My title}
  This is a \textbf{tcolorbox}.
\end{mybox}
\begin{mybox}[attach title to upper,after title={:\ }]{My title}
  This is a \textbf{tcolorbox}.
\end{mybox}
```

> **My title** — This is a **tcolorbox**.

> **My title:** This is a **tcolorbox**.

More title options are documented in Section 3.7 on page 41 and Section 7.2 on page 99.

3.2 Lower Part

/tcb/lowerbox=⟨*mode*⟩ (no default, initially `visible`)

Controls the treatment of the lower part of the box. Feasible values for ⟨*mode*⟩ are:

- `visible`: usual type setting of the lower part,
- `invisible`: empty space instead of the lower part contents,
- `ignored`: the lower part is not used (here).

The last two values are usually applied in connection with `savelowerto`.

```
\begin{tcolorbox}[lowerbox=invisible,colback=white]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part (but invisible).
\end{tcolorbox}

\begin{tcolorbox}[lowerbox=ignored,colback=white]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part (but ignored).
\end{tcolorbox}
```

> This is a **tcolorbox**.
> ---

> This is a **tcolorbox**.

/tcb/savelowerto=⟨*file name*⟩ (no default, initially empty)

Saves the content of the lower part in a file for an optional later usage.

```
\begin{tcolorbox}[lowerbox=invisible,savelowerto=\jobname_bspsave.tex,colback=white]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part which may be quite complex:
$\displaystyle f(x)=\frac{1+x^2}{1-x^2}$.
\end{tcolorbox}

Now, we load the saved text:\\
\input{\jobname_bspsave.tex}
```

> This is a **tcolorbox**.
> ---

Now, we load the saved text:

This is the lower part which may be quite complex: $f(x) = \dfrac{1+x^2}{1-x^2}$.

/tcb/lower separated=true|false (default `true`, initially `true`)

If set to `true`, the lower part is visually separated from the upper part. It depends on the chosen skin how the visualization of the separation is done.

```
% \tcbuselibrary{skins}
\tcbset{colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries,nobeforeafter,
  width=(\linewidth-4mm)/2,fontlower=\itshape}

\begin{tcolorbox}[title=Lower separated]
This is the upper part.
\tcblower
This is the lower part.
\end{tcolorbox}\hfill
\begin{tcolorbox}[title=Lower not separated,lower separated=false]
This is the upper part.
\tcblower
This is the lower part.
\end{tcolorbox}
\par\bigskip\par
\begin{tcolorbox}[sidebyside,title=Lower separated]
This is the upper part.
\tcblower
This is the lower part.
\end{tcolorbox}\hfill
\begin{tcolorbox}[sidebyside,title=Lower not separated,lower separated=false]
This is the upper part.
\tcblower
This is the lower part.
\end{tcolorbox}
\par\bigskip\par
\begin{tcolorbox}[beamer,title=Lower separated]
This is the upper part.
\tcblower
This is the lower part.
\end{tcolorbox}\hfill
\begin{tcolorbox}[beamer,title=Lower not separated,lower separated=false]
This is the upper part.
\tcblower
This is the lower part.
\end{tcolorbox}
```

Lower separated	**Lower not separated**
This is the upper part.	This is the upper part.
This is the lower part.	*This is the lower part.*

Lower separated	**Lower not separated**
This is the upper part. / *This is the lower part.*	This is the upper part. / *This is the lower part.*

Lower separated	**Lower not separated**
This is the upper part.	This is the upper part.
This is the lower part.	*This is the lower part.*

17

/tcb/savedelimiter=⟨*name*⟩ (no default, initially tcolorbox)

Used in connection with new environment definitions which extend tcolorbox and use or allow the option savelowerto. To catch the end of the new box environment ⟨*name*⟩ has to be the name of this environment. Additionally, the environment definition has to use \tcolorbox instead of \begin{tcolorbox} and \endtcolorbox instead of \end{tcolorbox}.

```
\newenvironment{mybox}[1]{%
  \tcolorbox[savedelimiter=mybox,
            savelowerto=\jobname_bspsave2.tex,lowerbox=ignored,
            colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries,
            title=#1]}%
  {\endtcolorbox}

\begin{mybox}{My Example}
Upper part.
\tcblower
Saved lower part!
\end{mybox}

Now, the saved part is used:
\begin{tcolorbox}[colback=green!5]
\input{\jobname_bspsave2.tex}
\end{tcolorbox}
```

> **My Example**
>
> Upper part.

Now, the saved part is used:

> Saved lower part!

The savedelimiter is used implicitly with \newtcolorbox^{→P.12} which allows a more convenient usage:

```
\newtcolorbox{mybox}[1]{%
            savelowerto=\jobname_bspsave2.tex,lowerbox=ignored,
            colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries,
            title=#1}%

\begin{mybox}{My Example}
Upper part.
\tcblower
Saved lower part!
\end{mybox}

Now, the saved part is used:
\begin{tcolorbox}[colback=green!5]
\input{\jobname_bspsave2.tex}
\end{tcolorbox}
```

> **My Example**
>
> Upper part.

Now, the saved part is used:

> Saved lower part!

3.3 Colors and Fonts

/tcb/colframe=⟨*color*⟩   (no default, initially `black!75!white`)

Sets the frame ⟨*color*⟩ of the box.

```
\begin{tcolorbox}[colframe=red!50!white]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> This is a **tcolorbox**.

/tcb/colback=⟨*color*⟩   (no default, initially `black!5!white`)

Sets the background ⟨*color*⟩ of the box.

```
\begin{tcolorbox}[colback=red!50!white]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> This is a **tcolorbox**.

/tcb/title filled=true|false   (default `true`, initially `false`)

Switches the drawing of the title background according to the given value. This option is set to `true` automatically by [/tcb/colbacktitle](#), [/tcb/opacitybacktitle](#)$^{→P.\,33}$, and [/tcb/title style](#)$^{→P.\,96}$, and [/tcb/title code](#)$^{→P.\,87}$.

```
\begin{tcolorbox}[title=My title,title filled]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
\begin{tcolorbox}[title=My title,
   title filled=false]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> My title
>
> This is a **tcolorbox**.
>
> My title
>
> This is a **tcolorbox**.

/tcb/colbacktitle=⟨*color*⟩   (no default, initially `black!50!white`)

Sets the background ⟨*color*⟩ of the title area of the box.

```
\begin{tcolorbox}[colbacktitle=red!50!white,
   title=My title,coltitle=black,
   fonttitle=\bfseries]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> **My title**
>
> This is a **tcolorbox**.

/tcb/colupper=⟨*color*⟩ (no default, initially `black`)

Sets the text ⟨*color*⟩ of the upper part.

```
\begin{tcolorbox}[colupper=red!75!black]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

This is a **tcolorbox**.

This is the lower part.

/tcb/collower=⟨*color*⟩ (no default, initially `black`)

Sets the text ⟨*color*⟩ of the lower part.

```
\begin{tcolorbox}[collower=red!75!black]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

This is a **tcolorbox**.

This is the lower part.

/tcb/coltext=⟨*color*⟩ (style, no default, initially `black`)

Sets the text ⟨*color*⟩ of the box. This is an abbreviation for setting `colupper` and `collower` to the same value.

```
\begin{tcolorbox}[coltext=red!75!black]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

This is a **tcolorbox**.

This is the lower part.

/tcb/coltitle=⟨*color*⟩ (no default, initially `white`)

Sets the title text ⟨*color*⟩ of the box.

```
\begin{tcolorbox}[coltitle=red!75!black,
  colbacktitle=black!10!white,title=Test]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

Test

This is a **tcolorbox**.

/tcb/fontupper=⟨*text*⟩   (no default, initially empty)
Sets ⟨*text*⟩ before the content of the upper part (e. g. font settings).

```
\begin{tcolorbox}[fontupper=Hello!~\sffamily]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> Hello! This is a **tcolorbox**.

/tcb/fontlower=⟨*text*⟩   (no default, initially empty)
Sets ⟨*text*⟩ before the content of the lower part (e. g. font settings).

```
\begin{tcolorbox}[fontlower=\sffamily\bfseries]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> This is a **tcolorbox**.
>
> -
>
> **This is the lower part.**

/tcb/fonttitle=⟨*text*⟩   (no default, initially empty)
Sets ⟨*text*⟩ before the content of the title text (e. g. font settings).

```
\begin{tcolorbox}[fonttitle=\sffamily\bfseries\large,title=Hello]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> **Hello**
>
> This is a **tcolorbox**.

More color options are provided by using skins documented in Section 7 from page 93.

3.4 Geometry

/tcb/width=⟨*length*⟩ (no default, initially `\linewidth`)
Sets the total width of the colored box to ⟨*length*⟩. See also `/tcb/height`[→P.35].

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[width=\linewidth/2]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a **tcolorbox**.

/tcb/toprule=⟨*length*⟩ (no default, initially `0.5mm`)
Sets the line width of the top rule to ⟨*length*⟩.

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[toprule=3mm]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a **tcolorbox**.

/tcb/bottomrule=⟨*length*⟩ (no default, initially `0.5mm`)
Sets the line width of the bottom rule to ⟨*length*⟩.

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[bottomrule=3mm]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a **tcolorbox**.

/tcb/leftrule=⟨*length*⟩ (no default, initially `0.5mm`)
Sets the line width of the left rule to ⟨*length*⟩.

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[leftrule=3mm]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a **tcolorbox**.

/tcb/rightrule=⟨*length*⟩ (no default, initially `0.5mm`)
Sets the line width of the right rule to ⟨*length*⟩.

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[rightrule=3mm]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> This is a **tcolorbox**.

/tcb/titlerule=⟨*length*⟩ (no default, initially `0.5mm`)
Sets the line width of the rule below the title to ⟨*length*⟩.

```
\tcbset{enhanced,colback=red!5!white,colframe=red!75!black,
  colbacktitle=red!90!black}

\begin{tcolorbox}[titlerule=3mm,title=This is the title]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> This is the title
>
> This is a **tcolorbox**.

/tcb/boxrule=⟨*length*⟩ (style, no default, initially `0.5mm`)
Sets all rules of the frame to ⟨*length*⟩, i.e. `/tcb/toprule`→P. 22, `/tcb/bottomrule`→P. 22,
`/tcb/leftrule`→P. 22, `/tcb/rightrule`, and `/tcb/titlerule`.

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[boxrule=3mm]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> This is a **tcolorbox**.

More options for drawing a `/tcb/borderline`→P. 118 are provided by using skins documented in
Section 7 from page 93.

23

/tcb/arc=⟨*length*⟩   (no default, initially `1mm`)

Sets the inner radius of the four frame arcs to ⟨*length*⟩.

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[arc=0mm]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
\begin{tcolorbox}[arc=4mm]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a **tcolorbox**.

This is a **tcolorbox**.

/tcb/outer arc=⟨*length*⟩   (no default, initially unset)

Sets the outer radius of the four frame arcs to ⟨*length*⟩.

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[arc=4mm,outer arc=1mm]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a **tcolorbox**.

/tcb/auto outer arc   (no value, initially set)

Sets the outer radius of the four frame arcs automatically in dependency of the inner radius given by `/tcb/arc`.

/tcb/boxsep=⟨*length*⟩   (no default, initially `1mm`)

Sets a common padding of ⟨*length*⟩ between the text content and the frame of the box. This value is added to the key values of `left`, `right`, `top`, `bottom`, and `middle` at the appropriate places.

```
\tcbset{colback=red!5!white,colframe=red!75!black,width=(\linewidth-4mm)/2,
  before=,after=\hfill}

\begin{tcolorbox}[boxsep=5mm]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
\begin{tcolorbox}[boxsep=5mm,draft]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

frame: w=195.33255pt, h=48.97505pt

This is a **tcolorbox**.

upper: w=141.2724pt, h=6.296pt

interior: w=192.4873pt, h=46.1298pt

/tcb/left=⟨*length*⟩ (style, no default, initially 4mm)
Sets the left space between all text parts and frame (additional to `boxsep`). This is an abbreviation for setting `lefttitle`, `leftupper`, and `leftlower` to the same value.

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[left=0mm]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a **tcolorbox**.
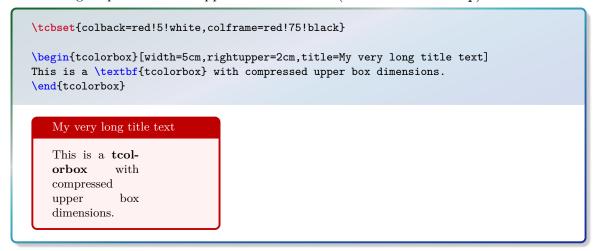

/tcb/lefttitle=⟨*length*⟩ (no default, initially 4mm)
Sets the left space between title text and frame (additional to `boxsep`).

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[lefttitle=3cm,title=My Title]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

My Title

This is a **tcolorbox**.

/tcb/leftupper=⟨*length*⟩ (no default, initially 4mm)
Sets the left space between upper text and frame (additional to `boxsep`).

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[leftupper=3cm,title=My Title]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

My Title

This is a **tcolorbox**.

/tcb/leftlower=⟨*length*⟩ (no default, initially 4mm)
Sets the left space between lower text and frame (additional to `boxsep`).

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[leftlower=3cm]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

This is a **tcolorbox**.

This is the lower part.

/tcb/right=⟨*length*⟩ (style, no default, initially 4mm)

Sets the right space between all text parts and frame (additional to `boxsep`). This is an abbreviation for setting `righttitle`, `rightupper`, and `rightlower` to the same value.

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[width=5cm,right=2cm]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a **tcol-orbox**.

/tcb/righttitle=⟨*length*⟩ (no default, initially 4mm)

Sets the right space between title text and frame (additional to `boxsep`).

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[width=5cm,righttitle=2cm,title=My very long title text]
This is a \textbf{tcolorbox} with standard upper box dimensions.
\end{tcolorbox}
```

My very long ti-tle text

This is a **tcolorbox** with standard upper box dimen-sions.

/tcb/rightupper=⟨*length*⟩ (no default, initially 4mm)

Sets the right space between upper text and frame (additional to `boxsep`).

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[width=5cm,rightupper=2cm,title=My very long title text]
This is a \textbf{tcolorbox} with compressed upper box dimensions.
\end{tcolorbox}
```

My very long title text

This is a **tcol-orbox** with compressed upper box dimensions.

/tcb/rightlower=⟨*length*⟩ (no default, initially 4mm)
Sets the right space between lower text and frame (additional to `boxsep`).

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[width=5cm,rightlower=2cm]
This is a \textbf{tcolorbox} with standard upper box dimensions.
\tcblower
This is the lower part with large space at right.
\end{tcolorbox}
```

> This is a **tcolorbox** with standard upper box dimensions.
> ------
> This is the lower part with large space at right.

/tcb/top=⟨*length*⟩ (no default, initially 2mm)
Sets the top space between text and frame (additional to `boxsep`).

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[top=0mm]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> This is a **tcolorbox**.
> ------
> This is the lower part.

/tcb/toptitle=⟨*length*⟩ (no default, initially 0mm)
Sets the top space between title and frame (additional to `boxsep`).

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[toptitle=3mm,title=My title]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> My title
>
> This is a **tcolorbox**.

/tcb/bottom=⟨*length*⟩ (no default, initially 2mm)
Sets the bottom space between text and frame (additional to `boxsep`).

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[bottom=0mm]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> This is a **tcolorbox**.
>
> This is the lower part.

/tcb/bottomtitle=⟨*length*⟩ (no default, initially 0mm)
Sets the bottom space between title and frame (additional to `boxsep`).

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[bottomtitle=3mm,title=My title]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> My title
>
> This is a **tcolorbox**.

/tcb/middle=⟨*length*⟩ (no default, initially 2mm)
Sets the space between upper and lower text to the separation line (additional to `boxsep`).
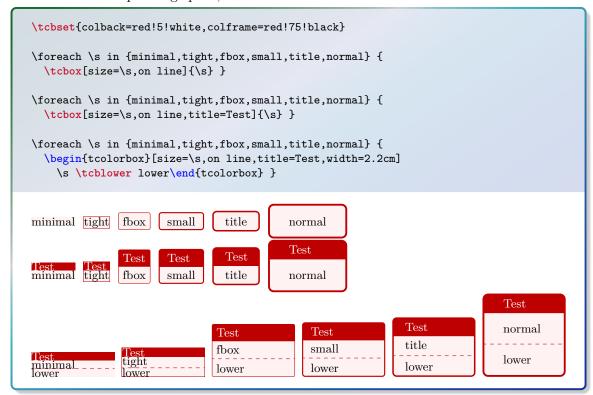

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[middle=0mm,boxsep=0mm]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> This is a **tcolorbox**.
> This is the lower part.

Sets all geometry keys with exception of `/tcb/width`[→P. 22] to predefined length values. For ⟨*name*⟩, the following values are feasible:

- `normal`: normal sized boxes e.g. of width `\linewidth`.
- `title`: title line sized boxes.
- `small`: small boxes e.g. for keyword highlighting.
- `fbox`: identical to the standard `\fbox`.
- `tight`: no padding space at all.
- `minimal`: no padding space, no box rules.

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\foreach \s in {minimal,tight,fbox,small,title,normal} {
  \tcbox[size=\s,on line]{\s} }

\foreach \s in {minimal,tight,fbox,small,title,normal} {
  \tcbox[size=\s,on line,title=Test]{\s} }

\foreach \s in {minimal,tight,fbox,small,title,normal} {
  \begin{tcolorbox}[size=\s,on line,title=Test,width=2.2cm]
    \s \tcblower lower\end{tcolorbox} }
```

minimal tight fbox small title normal

Test Test Test Test Test Test

outer arc	auto	auto	auto	auto	0.0pt	0.0pt

/tcb/oversize=⟨*length*⟩   (style, default `0pt`)

Sets the text width of the upper part to the current line width plus an optional ⟨*length*⟩. This is achieved by changing the keys `/tcb/width`→P.22 `/tcb/enlarge left by`→P.61, and `/tcb/enlarge right by`→P.61 appropriately. The resulting box is overlapping into the left and right margin of the page. Note that this style option has to be given *after* all other geometry keys!

```
\tcbset{colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries}

/tcb/toggle left and right=⟨*toggle preset*⟩   (default `evenpage`, initially `none`)

According to the ⟨*toggle preset*⟩, the left and the right settings of the `tcolorbox` are switched or not. Feasible values are:

- `none`: no switching.
- `forced`: the values of the left and right rules and spaces are switched.
- `evenpage`: if the page is an even page, the values of the left and right rules and spaces are switched. It is recommended that one use this setting in conjunction with /tcb/check odd page^{→ P. 73}.

```
% \usepackage{changepage} for 'check odd page'
% \usepackage{lipsum}
% \usetikzlibrary{patterns}
% \tcbuselibrary{skins,breakable}
\begin{tcolorbox}[skin=enhancedmiddle,breakable,
  check odd page,toggle left and right,
  boxrule=0mm,top=0mm,bottom=0mm,left=1mm,right=1mm,
  rightrule=1cm,colupper=blue!25!black,
  interior style={fill overzoom image=lichtspiel.jpg,fill image opacity=0.25},
  frame style={pattern=crosshatch dots light steel blue},
  overlay={%
    \ifoddpage\coordinate (X) at ([xshift=-5mm]frame.east);
         \else\coordinate (X) at ([xshift=5mm]frame.west);\fi
    \fill[shading=ball,ball color=blue!50!white,opacity=0.5] (X) circle (4mm);}]
\lipsum[1-6]
\end{tcolorbox}
```

This example switches a `1cm` thick rule from the left to the right side depending on the page number. Thereby, the rule is always on the outer side of the double-sided paper. Additionally, a ball is drawn on the outer side with help of an overlay.

3.5 Transparency

Transparency effects are likely to be used in conjunction with *jigsaw* skin variants, see Section 7.10 on page 137.

/tcb/opacityframe=⟨*fraction*⟩   (no default, initially `1.0`)

Sets the frame opacity of the box to the given ⟨*fraction*⟩.

```
\begin{tcolorbox}[opacityframe=0.25]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a **tcolorbox**.

/tcb/opacityback=⟨*fraction*⟩   (no default, initially `1.0`)

Sets the background opacity of the box to the given ⟨*fraction*⟩.

```
\begin{tcolorbox}[standard jigsaw,

This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a **tcolorbox**.

/tcb/opacitybacktitle=⟨*fraction*⟩   (no default, initially `1.0`)

Sets the title background opacity of the box to the given ⟨*fraction*⟩.

```
\begin{tcolorbox}[standard jigsaw,
  opacityframe=0.5, opacitybacktitle=0.5,
  title filled, title=This is a title]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a title

This is a **tcolorbox**.

/tcb/opacityfill=⟨*fraction*⟩   (style, no default, initially `1.0`)

Sets the fill opacity for frame, interior and optionally the title background to the given ⟨*fraction*⟩.

```
\begin{tcolorbox}[standard jigsaw,
  opacityfill=0.7, title=This is a title]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a title

This is a **tcolorbox**.

/tcb/opacityupper=⟨*fraction*⟩ (no default, initially `1.0`)
    Sets the text opacity of the upper box part to the given ⟨*fraction*⟩.

```
\begin{tcolorbox}[enhanced,opacityupper=0.5,
  interior style={pattern=crosshatch dots ↵
      ↳light steel blue}]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/opacitylower=⟨*fraction*⟩ (no default, initially `1.0`)
    Sets the text opacity of the lower box part to the given ⟨*fraction*⟩.

```
\begin{tcolorbox}[enhanced,opacitylower=0.5,
  interior style={pattern=crosshatch dots ↵
      ↳light steel blue}]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

This is a **tcolorbox**.

This is the lower part.

/tcb/opacitytext=⟨*fraction*⟩ (no default, initially `1.0`)
    Sets the text opacity of the upper and the lower box part to the given ⟨*fraction*⟩.

```
\begin{tcolorbox}[enhanced,opacitytext=0.5,
  interior style={pattern=crosshatch dots ↵
      ↳light steel blue}]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

This is a tcolorbox.

This is the lower part.

/tcb/opacitytitle=⟨*fraction*⟩ (no default, initially `1.0`)
    Sets the text opacity of the box title to the given ⟨*fraction*⟩.

```
\begin{tcolorbox}[enhanced,opacitytitle=0.7,
  fonttitle=\bfseries,title=This is a title,
  title style={pattern=crosshatch dots light ↵
      ↳steel blue}]
This is a \textbf{tcolorbox}.
\end{tcolorbox}

This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a title

This is a **tcolorbox**.

3.6 Height Control

In a typical usage scenario, the height of a `tcolorbox` is computed automatically to fit the content. Nevertheless, the height can be set to a fixed value or to fit commonly for several boxes, e.g. if boxes are set side by side.

> The height control keys are only applicable to unbreakable boxes. If a box is set to be `/tcb/breakable`[→P. 246], the height is always computed according to the *natural height*.

/tcb/natural height (no value, initially set)
   Sets the total height of the colored box to its natural height depending on the box content.

/tcb/height=⟨*length*⟩ (no default)
   Sets the total height of the colored box to ⟨*length*⟩ independent of the box content. ⟨*length*⟩ is the minimum height of the box, if `/tcb/height plus` is larger than zero.

```
\tcbset{width=(\linewidth-2mm)/3,before=,after=\hfill,
colframe=blue!75!black,colback=white}

\begin{tcolorbox}[height=1cm,valign=center]
  This box has a height of 1cm.
\end{tcolorbox}
\begin{tcolorbox}[height=2cm,valign=center]
  This box has a height of 2cm.
\end{tcolorbox}
\begin{tcolorbox}[height=3cm,split=0.5,valign=center,valign lower=center]
  This box has a height of 3cm.
  \tcblower
  Lower part.
\end{tcolorbox}
```

This box has a height of 1cm.

This box has a height of 2cm.

This box has a height of 3cm.
- - - - - - - - - - - - - - - - - - - -
Lower part.

/tcb/height plus=⟨*length*⟩ (no default, initially `0pt`)
   The box may extend a given fixed `/tcb/height` up to the given ⟨*length*⟩.

```
\tcbset{colback=red!5!white,colframe=red!75!black,left=1mm,top=1mm,bottom=1mm,
  right=1mm,boxsep=0mm,width=3cm,nobeforeafter}

Pellentesque a nulla. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Aliquam tincidunt urna. Nulla ullamcorper vestibulum turpis. Pellentesque cursus luctus mauris.

/tcb/space=⟨*fraction*⟩ (no default, initially 0)

If the height of a `tcolorbox` is not the natural height, the space difference between the forced and the natural size is distributed between the upper and the lower part of the box. This space could also be negative. ⟨*fraction*⟩ with a value between 0 and 1 is the amount of space which is added to the upper part, the rest is added to the lower part. If there is no lower part, then all of the space is added to the upper part always.

```
\tcbset{width=(\linewidth-2mm)/3,before=,after=\hfill,
colframe=blue!75!black,colback=white,height=3cm}

\foreach \f in {0.2,0.4,0.7}
{\begin{tcolorbox}[space=\f]
    This is the upper part.
    \tcblower
    This is the lower part.
\end{tcolorbox}}
```

This is the upper part.	This is the upper part.	This is the upper part.
This is the lower part.	This is the lower part.	This is the lower part.

/tcb/space to upper (style)

This is an abbreviation for `space=1`, i. e. all extra space is added to the upper part.

/tcb/space to lower (style, initially set)

This is an abbreviation for `space=0`, i. e. all extra space is added to the lower part (if there is any).

/tcb/space to both (style)

This is an abbreviation for `space=0.5`, i. e. the extra space equally distributed between the upper and the lower part.

```
\tcbset{width=(\linewidth-2mm)/3,before=,after=\hfill,
colframe=blue!75!black,colback=white,height=3cm}

\foreach \myspace in {space to upper,space to both,space to lower}
{\begin{tcolorbox}[\myspace]
    This is the upper part.
    \tcblower
    This is the lower part.
\end{tcolorbox}}
```

This is the upper part.	This is the upper part.	This is the upper part.
This is the lower part.	This is the lower part.	This is the lower part.

/tcb/split=⟨*fraction*⟩ (no default)

If the height of a `tcolorbox` is not the natural height, the ⟨*fraction*⟩ with a value between 0 and 1 determines the positioning of the segmentation between the upper and the lower part. Here, 0 stands for top and 1 for bottom. Note that the box is split regardless of the actual dimensions of the text parts!

```
\tcbset{width=(\linewidth-2mm)/3,before=,after=\hfill,height=3cm,
colback=white,colframe=blue!75!black,valign=center,valign lower=center}

\foreach \f in {0.1,0.5,0.8}
{\begin{tcolorbox}[split=\f]
This is the upper part.
\tcblower
This is the lower part with a lot of text in several lines.
\end{tcolorbox}}
```

> This is the upper part.
>
> This is the lower part with a lot of text in several lines.

> This is the upper part.
>
> This is the lower part with a lot of text in several lines.

> This is the upper part.
>
> This is the lower part with a lot of text in several lines.

/tcb/valign=⟨*alignment*⟩ (no default, initially `top`)

If the height of a `tcolorbox` is not the natural height, `valign` determines the vertical ⟨*alignment*⟩ of the upper part. Feasible values are `top`, `center`, and `bottom`. For a box with natural height, these values are meaningless.

```
\tcbset{width=(\linewidth-2mm)/3,before=,after=\hfill,
colframe=blue!75!black,colback=white,height=2cm}

\foreach \myalign in {top,center,bottom}
{\begin{tcolorbox}[valign=\myalign]
  This is a \textbf{tcolorbox}.
\end{tcolorbox}}
```

> This is a **tcolorbox**.

> This is a **tcolorbox**.

> This is a **tcolorbox**.

/tcb/valign lower=⟨*alignment*⟩ (no default, initially `top`)
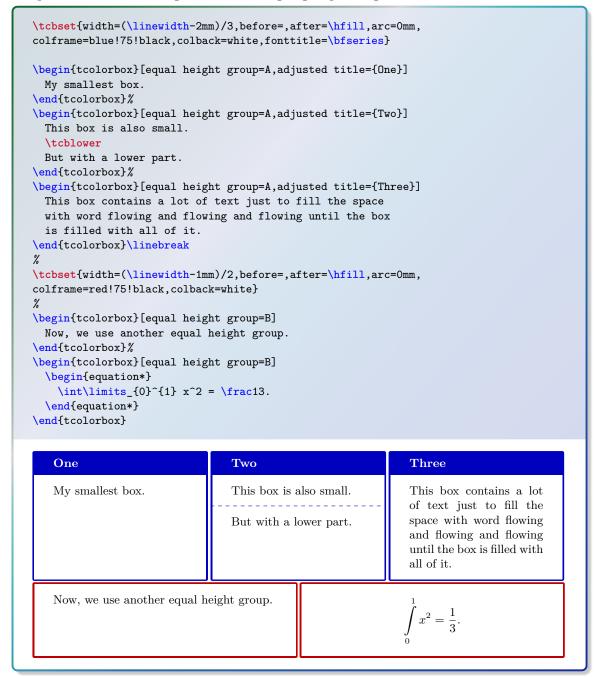

This key has the same meaning for the lower part as `valign` for the upper part, i.e. it determines the vertical ⟨*alignment*⟩ of the lower part with feasible values `top`, `center`, and `bottom`.

/tcb/equal height group=⟨*id*⟩ (no default)
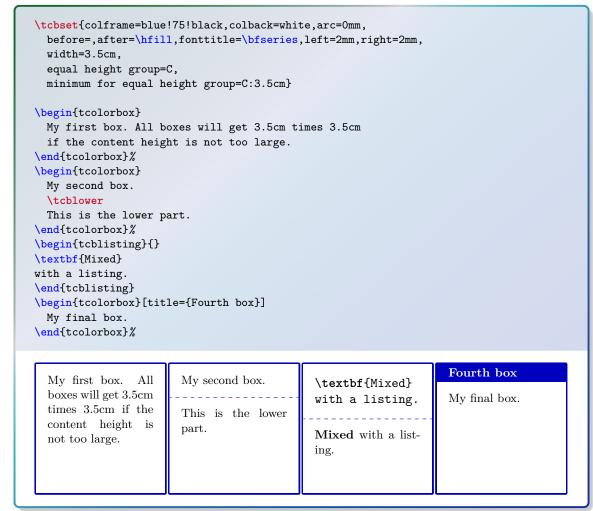

Boxes which are members of an `equal height group` will all get the same height, i.e. the maximum of all their natural heights. The ⟨*id*⟩ serves to distinguish between different height groups. This ⟨*id*⟩ should contain only characters which are feasible for TeX macro names, typically alphabetic characters but no numerals and spaces. Note that you have to compile twice to see changes and that height groups are global definitions.

```
\tcbset{width=(\linewidth-2mm)/3,before=,after=\hfill,arc=0mm,
colframe=blue!75!black,colback=white,fonttitle=\bfseries}

\begin{tcolorbox}[equal height group=A,adjusted title={One}]
  My smallest box.
\end{tcolorbox}%
\begin{tcolorbox}[equal height group=A,adjusted title={Two}]
  This box is also small.
  \tcblower
  But with a lower part.
\end{tcolorbox}%
\begin{tcolorbox}[equal height group=A,adjusted title={Three}]
  This box contains a lot of text just to fill the space
  with word flowing and flowing and flowing until the box
  is filled with all of it.
\end{tcolorbox}\linebreak
%
\tcbset{width=(\linewidth-1mm)/2,before=,after=\hfill,arc=0mm,
colframe=red!75!black,colback=white}
%
\begin{tcolorbox}[equal height group=B]
  Now, we use another equal height group.
\end{tcolorbox}%
\begin{tcolorbox}[equal height group=B]
  \begin{equation*}
    \int\limits_{0}^{1} x^2 = \frac13.
  \end{equation*}
\end{tcolorbox}
```

One	**Two**	**Three**
My smallest box.	This box is also small. ------ But with a lower part.	This box contains a lot of text just to fill the space with word flowing and flowing and flowing until the box is filled with all of it.

Now, we use another equal height group.	$$\int\limits_{0}^{1} x^2 = \frac{1}{3}.$$

/tcb/minimum for equal height group=⟨*id*⟩:⟨*length*⟩ (no default, initially unset)
Plants a ⟨*length*⟩ into the equal height group with the given ⟨*id*⟩. This ensures that the height will not drop below ⟨*length*⟩. Note that you cannot reduce a computed height value by using this key with a small value. The difference to applying `/tcb/height`[→P. 35] directly is that the boxes are never too small for their content.

```
\tcbset{colframe=blue!75!black,colback=white,arc=0mm,
  before=,after=\hfill,fonttitle=\bfseries,left=2mm,right=2mm,
  width=3.5cm,
  equal height group=C,
  minimum for equal height group=C:3.5cm}

\begin{tcolorbox}

\end{tcolorbox}%
```

| My first box. All boxes will get 3.5cm times 3.5cm if the content height is not too large. | My second box.

 This is the lower part. | `\textbf{Mixed}` `with a listing.`

 Mixed with a listing. | **Fourth box**
 My final box. |

3.7 Box Content Additions

The following options introduce some arbitrary ⟨*code*⟩ to the content of a `tcolorbox`. These additions can be given at the beginning or at the ending of the title, the upper part, or the lower part.

/tcb/before title=⟨*code*⟩   (no default, initially unset)
The given ⟨*code*⟩ is placed *after* the color and font settings and *before* the content of the title.

```
\tcbset{before title={\textcolor{yellow}{\large Important:}~},
  colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[title=My title]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> **Important: My title**
>
> This is a **tcolorbox**.

/tcb/after title=⟨*code*⟩   (no default, initially unset)
The given ⟨*code*⟩ is placed *after* the content of the title.

```
\tcbset{after title={\hfill\colorbox{Navy}{approved}},
  colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[title=My title]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```
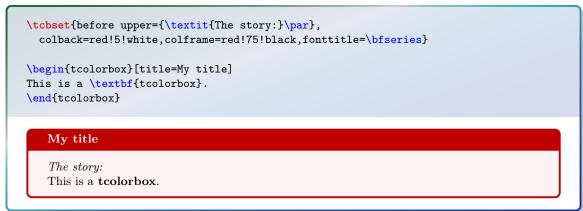

> **My title**   **approved**
>
> This is a **tcolorbox**.

/tcb/before upper=⟨*code*⟩   (no default, initially unset)
The given ⟨*code*⟩ is placed *after* the color and font settings and *before* the content of the upper part.

```
\tcbset{before upper={\textit{The story:}\par},
  colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[title=My title]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> **My title**
>
> *The story:*
> This is a **tcolorbox**.

/tcb/after upper=⟨*code*⟩   (no default, initially unset)
The given ⟨*code*⟩ is placed *after* the content of the upper part.

```
\tcbset{after upper={\par\hfill\textit{Read more next week}},
  colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[title=My title]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> **My title**
>
> This is a **tcolorbox**.
>
> *Read more next week*

/tcb/before lower=⟨*code*⟩   (no default, initially unset)
The given ⟨*code*⟩ is placed *after* the color and font settings and *before* the content of the lower part.

```
\tcbset{before lower=\textit{Behold:~},colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> This is a **tcolorbox**.
> --
> *Behold:* This is the lower part.

/tcb/after lower=⟨*code*⟩   (no default, initially unset)
The given ⟨*code*⟩ is placed *after* the content of the lower part.

```
\tcbset{after lower=\ \textit{This is the end.},
  colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> This is a **tcolorbox**.
> --
> This is the lower part. *This is the end.*

/tcb/center title (style, no value, initially unset)

This style sets /tcb/before title→P. 41 to \centering.

```
\tcbset{center title,colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries}

  \fill[red] (45:5mm) circle (1mm);
  \fill[red] (135:5mm) circle (1mm);
  \draw[line width=1mm,red] (215:5mm) arc (215:325:5mm);
\end{tcolorbox}
```

Ti*k*Z drawing

/tcb/tikz lower=⟨*options*⟩ (style)

This style adds a centered `tikzpicture` environment to the start and end of the lower part. The ⟨*options*⟩ may be given as Ti*k*Z picture options.

```
% \usepackage{tikz}
% \usetikzlibrary{skins,listings}
\tcbset{tikz lower,listing side text,fonttitle=\bfseries,
  bicolor,colback=LightBlue!50!white,colbacklower=white,colframe=black,
  righthand width=3cm}

\begin{tcblisting}{title=\tikzname\  drawing}
\path[fill=yellow,draw=yellow!75!red]
    (0,0) circle (1cm);
\fill[red] (45:5mm) circle (1mm);
\fill[red] (135:5mm) circle (1mm);
\draw[line width=1mm,red]
    (215:5mm) arc (215:325:5mm);
\end{tcblisting}
```

Ti*k*Z drawing

```
\path[fill=yellow,draw=yellow!75!red]
    (0,0) circle (1cm);
\fill[red] (45:5mm) circle (1mm);
\fill[red] (135:5mm) circle (1mm);
\draw[line width=1mm,red]
    (215:5mm) arc (215:325:5mm);
```

/tcb/tikznode upper=⟨*options*⟩ (style)

This style places the upper part content into a centered Ti*k*Z node. The ⟨*options*⟩ may be given as Ti*k*Z node options. This style is especially useful for boxes with multiline texts which are fitted to the text width.

```
% \usepackage{tikz}
\newtcbox{\headline}[1][]{enhanced,before=\begin{center},after=\end{center},
  fontupper=\Large\bfseries,colframe=red!50!black,colback=red!10!white,
  drop fuzzy shadow=yellow,tikznode upper,#1}

\headline{Important\\Headline}
```

**Important
Headline**

/tcb/tikznode lower=⟨*options*⟩ (style)

This style places the lower part content into a centered Ti*k*Z node. The ⟨*options*⟩ may be given as Ti*k*Z node options.

```
% \usepackage{tikz}
\begin{tcolorbox}[bicolor,colback=LightBlue!50!white,colbacklower=white,
  colframe=black,tikznode lower={inner sep=2pt,draw=red,fill=yellow}]
Upper part.
\tcblower
Lower part.
\end{tcolorbox}
```

Upper part.

Lower part.

/tcb/tikznode=⟨*options*⟩ (style)

Shortcut for setting `/tcb/tikznode upper` and `/tcb/tikznode lower` the same time.

/tcb/varwidth upper=⟨*length*⟩ (style, default `/tcb/width`[→ P. 22])

This style places the upper part content into a `varwidth` environment. This style needs the `varwidth` package [1] to be loaded manually. The resulting box has a maximal width of ⟨*length*⟩. This option is only senseful for a `\tcbox`[→ P. 11].

```
% \usepackage{varwidth}
\newtcbox{\varbox}{colframe=red!50!black,
  colback=red!10!white,varwidth upper}

\varbox{Short text.}
\varbox{This box contains is a longer text
  which is broken.}
```

Short text.

This box contains is a longer text which is broken.

`/tcb/code`=⟨*code*⟩   (no default, initially unset)

The given ⟨*code*⟩ is executed immediately. This option is useful to place some arbitrary code into an option list.

```
\tcbset{colback=red!5!white,colframe=red!75!black,
  code={Useless at this spot but functional.},
  fonttitle=\bfseries}

\begin{tcolorbox}[code={\newcommand{\mycommand}{\textit{working}}},
  title=My \mycommand\ title]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

Useless at this spot but functional.

My *working* title

This is a **tcolorbox**.

3.8 Overlays

With an overlay, arbitrary ⟨*graphical code*⟩ can be added to a `tcolorbox`. This code is executed *after* the frame and interior are drawn and *before* the text content is drawn. Therefore, you can decorate the `tcolorbox` with your own extensions. Common special cases are *watermarks* which are implemented using overlays. See Subsection 7.3 from page 106 if you want to add *watermarks.*

> If you use the core package only, the ⟨*graphical code*⟩ has to be `pgf` code and there is not much assistance for positioning. Therefore, the usage of the `/tcb/enhanced`^{→P.142} mode from the library skins is recommended which allows `tikz` code and gives access to `/tcb/geometry nodes`^{→P.84} for positioning.

/tcb/overlay=⟨*graphical code*⟩   (no default, initially unset)
Adds ⟨*graphical code*⟩ to the box drawing process. This ⟨*graphical code*⟩ is drawn *after* the frame and interior and *before* the text content.

```
% \tcbuselibrary{skins} % preamble
\tcbset{frogbox/.style={enhanced,colback=green!10,colframe=green!65!black,
  enlarge top by=5.5mm,
  overlay={\foreach \x in {2cm,3.5cm} {
    \begin{scope}[shift={([xshift=\x]frame.north west)}]
      \path[draw=green!65!black,fill=green!10,line width=1mm] (0,0) arc (0:180:5mm);
      \path[fill=black] (-0.2,0) arc (0:180:1mm);
    \end{scope}}}]}}

\begin{tcolorbox}[frogbox,title=My title]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

My title

This is a **tcolorbox**.

```
% \usetikzlibrary{patterns} % preamble
% \tcbuselibrary{skins}     % preamble
\tcbset{ribbonbox/.style={enhanced,colback=red!5!white,colframe=red!75!black,
  fonttitle=\bfseries,
  overlay={\path[fill=blue!75!white,draw=blue,double=white!85!blue,
    preaction={opacity=0.6,fill=blue!75!white},
    line width=0.1mm,double distance=0.2mm,
    pattern=fivepointed stars,pattern color=white!75!blue]
    ([xshift=-0.2mm,yshift=-1.02cm]frame.north east)
    -- ++(-1,1) -- ++(-0.5,0) -- ++(1.5,-1.5) -- cycle;}}}

\begin{tcolorbox}[ribbonbox,title=My title]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

My title

This is a **tcolorbox**.

This is the lower part.

/tcb/no overlay (style, no default, initially set)
   Removes the overlay if set before.

/tcb/overlay broken=⟨*graphical code*⟩ (no default, initially unset)
   If the box is set to be /tcb/breakable^{→P.246} and *is* broken actually, then the ⟨*graphical code*⟩ is added to the box drawing process. /tcb/overlay^{→P.50} overwrites this key.

/tcb/overlay unbroken=⟨*graphical code*⟩ (no default, initially unset)
   If the box is set to be /tcb/breakable^{→P.246} but *is not* broken actually or if the box is set to be /tcb/unbreakable^{→P.247}, then the ⟨*graphical code*⟩ is added to the box drawing process. /tcb/overlay^{→P.50} overwrites this key.

/tcb/overlay first=⟨*graphical code*⟩ (no default, initially unset)
   If the box is set to be /tcb/breakable^{→P.246} and *is* broken actually, then the ⟨*graphical code*⟩ is added to the box drawing process for the *first* part of the break sequence. /tcb/overlay^{→P.50} overwrites this key.

/tcb/overlay middle=⟨*graphical code*⟩ (no default, initially unset)
   If the box is set to be /tcb/breakable^{→P.246} and *is* broken actually, then the ⟨*graphical code*⟩ is added to the box drawing process for the *middle* parts (if any) of the break sequence. /tcb/overlay^{→P.50} overwrites this key.

/tcb/overlay last=⟨*graphical code*⟩ (no default, initially unset)
   If the box is set to be /tcb/breakable^{→P.246} and *is* broken actually, then the ⟨*graphical code*⟩ is added to the box drawing process for the *last* part of the break sequence. /tcb/overlay^{→P.50} overwrites this key.

/tcb/overlay unbroken and first=⟨*graphical code*⟩ (no default, initially unset)
   This is an optimized abbreviation for setting /tcb/overlay unbroken and /tcb/overlay first together. /tcb/overlay^{→P.50} overwrites this key.

/tcb/overlay middle and last=⟨*graphical code*⟩ (no default, initially unset)
   This is an optimized abbreviation for setting /tcb/overlay middle and /tcb/overlay last together. /tcb/overlay^{→P.50} overwrites this key.

/tcb/overlay unbroken and last=⟨*graphical code*⟩ (no default, initially unset)
   This is an optimized abbreviation for setting /tcb/overlay unbroken and /tcb/overlay last together. /tcb/overlay^{→P.50} overwrites this key.

This example demonstrates the application of break sequence specific overlay options. Here, we define an environment myexample based on tcolorbox where the visible drawing is done totally by overlay keys.
Here, the first application of myexample produces an unbroken tcolorbox. The frame is drawn by the code given with /tcb/overlay unbroken.
The second application of myexample is broken into several parts which are drawn by the codes given with /tcb/overlay first, /tcb/overlay middle, and /tcb/overlay last.

```
% Preamble:
%\usepackage{tikz,lipsum}
%\tcbuselibrary{skins,breakable}
%\newcounter{example}

> **Floating box from `floatplacement`**
>
> This floating box is placed at the top of a page.

3.9 Floating Objects

`/tcb/floatplacement`=⟨*values*⟩   (no default, initially `htb`)

Sets ⟨*values*⟩ as default values for the usage of `/tcb/float` and `/tcb/float*`. Feasible are the usual parameters for floating objects.

```
\tcbset{enhanced,colback=red!5!white,colframe=red!75!black,
    watermark color=red!15!white}

\begin{tcolorbox}[floatplacement=t,float,
                  title=Floating box from |floatplacement|,
                  watermark text={I am floating}]
  This floating box is placed at the top of a page.
\end{tcolorbox}
```

`/tcb/float`=⟨*values*⟩   (default from `floatplacement`)

Turns the box to a floating object where ⟨*values*⟩ are the usual parameters for such floating objects. If they are not used, the placement uses the default values given by `floatplacement`.

```
\begin{tcolorbox}[float, title=Floating box from |float|,
    enhanced,watermark text={I'm also floating}]
  This box floats to a feasible place automatically. You do not have to
  use a numbering for this floating object.
\end{tcolorbox}
```

> **Floating box from `float`**
>
> This box floats to a feasible place automatically. You do not have to use a numbering for this floating object.

`/tcb/float*`=⟨*values*⟩   (default from `floatplacement`)

Identical to `/tcb/float`, but for wide boxes spanning the whole page width of two column documents or in conjunction with the packages `multicol` or `paracol`. Note that you have to set `width=\textwidth` additionally, if the box should span the whole page width in these cases!

```
\begin{tcolorbox}[float*=b, title=Floating box from |float*|,width=\textwidth,
    enhanced,watermark text={I'm also floating}]
  In this single column document, you will see no difference to |float|.
\end{tcolorbox}
```

`/tcb/nofloat`   (style, initially set)

Turns the floating behavior off.

> **Floating box from `float*`**
>
> In this single column document, you will see no difference to `float`.

3.10 Side by Side

Further side by side options for code examples are `/tcb/listing side text`[→ P. 205], `/tcb/text side listing`[→ P. 205], `/tcb/listing outside text`[→ P. 205], and `/tcb/text outside listing`[→ P. 205].

/tcb/sidebyside=true|false   (default `true`, initially `false`)

Normally, the upper part and the lower part of the box have their positions as their names suggest. If `sidebyside` is set to `true`, the upper part is drawn *left-handed* and the lower part is drawn *right-handed*. Both parts are drawn together with the geometry settings of the upper part but the space is divided horizontally according to the following options. Colors, fonts, and box content additions are used individually. The resulting box is unbreakable.

```
\tcbset{colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[title=My title,sidebyside]
This is the upper (\textit{left-handed}) part.
\tcblower
This is the lower (\textit{right-handed}) part.
\end{tcolorbox}
```
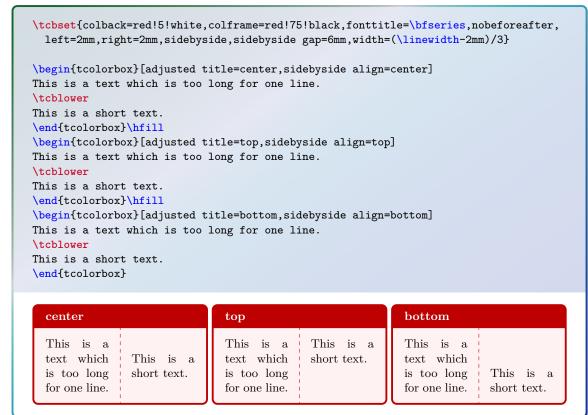

My title

This is the upper (*left-handed*) part.   This is the lower (*right-handed*) part.

/tcb/sidebyside align=⟨*alignment value*⟩   (no default, initially `center`)

Sets the vertical alignment for the left-handed and right-handed part. Feasible values are `center`, `top`, and `bottom`.

```
\tcbset{colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries,nobeforeafter,
  left=2mm,right=2mm,sidebyside,sidebyside gap=6mm,width=(\linewidth-2mm)/3}

\begin{tcolorbox}[adjusted title=center,sidebyside align=center]
This is a text which is too long for one line.
\tcblower
This is a short text.
\end{tcolorbox}\hfill
\begin{tcolorbox}[adjusted title=top,sidebyside align=top]

This is the lower (\textit{right-handed}) part.
\end{tcolorbox}
```

> **My title**
>
> This is the upper (*left-handed*) part. | This is the lower (*right-handed*) part.

/tcb/righthand ratio=⟨*fraction*⟩   (no default, initially `0.5`)

Sets the width of the right-handed part to the given ⟨*fraction*⟩ of the available space. ⟨*fraction*⟩ is a value between `0` and `1`.

```
\tcbset{colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[title=My title,sidebyside,righthand ratio=0.25]
This is the upper (\textit{left-handed}) part.
\tcblower
This is the lower (\textit{right-handed}) part.
\end{tcolorbox}
```

> **My title**
>
> This is the upper (*left-handed*) part. | This is the lower (*right-handed*) part.

3.11 Embedding into the Surroundings

Typically, but not necessarily, a `tcolorbox` is put inside a separate paragraph and has some vertical space before and after it. This behavior is controlled by the keys `before` and `after`.

/tcb/before=⟨*code*⟩ (no default, initially see **/tcb/autoparskip**)
Sets the ⟨*code*⟩ which is executed before the colored box. It is not used for floating boxes.

/tcb/after=⟨*code*⟩ (no default, initially see **/tcb/autoparskip**)
Sets the ⟨*code*⟩ which is executed after the colored box. It is not used for floating boxes.

/tcb/parskip (style, no value)
Sets the keys `before` and `after` to values which are recommended, if the package `parskip` *is* used and there is no better idea for `before` and `after`.

```
\tcbset{parskip/.style={before={\par\pagebreak[0]\noindent},
                        after={\par}}}
```

/tcb/noparskip (style, no value)
Sets the keys `before` and `after` to values which are recommended, if the package `parskip` is *not* used and there is no better idea for `before` and `after`.

```
\tcbset{noparskip/.style={before={\par\smallskip\pagebreak[0]\noindent},
                          after={\par\smallskip}}}
```

/tcb/autoparskip (style, no value, initially set)
Tries to detect the usage of the package `parskip` and sets the keys `before` and `after` accordingly. Actually, the following is done:
- If the length of `\parskip` is greater than `0pt` at the beginning of the document, **/tcb/parskip** is executed. Here, the usage of package `parskip` is *assumed*.
- Otherwise, if the length of `\parskip` is not greater than `0pt` at the beginning of the document, **/tcb/noparskip** is executed. Here, the absence of package `parskip` is *assumed*.

`autoparskip` is the default for the package `tcolorbox`, if `before` or `after` are not changed otherwise.

/tcb/nobeforeafter (style, no value)
Abbreviation for clearing the keys `before` and `after`. The colored box is not put into a paragraph and there is no space before or after the box.

```
\tcbset{myone/.style={colback=LightGreen,colframe=DarkGreen,
  equal height group=nobefaf,width=\linewidth/4,nobeforeafter}}
\begin{tcolorbox}[myone,title=Box 1]Box 1\end{tcolorbox}%
\begin{tcolorbox}[myone,title=Box 2]Box 2\end{tcolorbox}%
\begin{tcolorbox}[myone,title=Box 3]Box 3\end{tcolorbox}%
\begin{tcolorbox}[myone,title=Box 4]Box 4\end{tcolorbox}
```

Box 1	Box 2	Box 3	Box 4
Box 1	Box 2	Box 3	Box 4

/tcb/baseline=⟨*length*⟩ (no default, initially `0pt`)
Used to set the `\pgfsetbaseline` value of the resulting `tcolorbox`.

3.12 Bounding Box

Normally, every `tcolorbox` has a bounding box which fits exactly to the dimensions of the outer frame. Therefore, LaTeX reserves exactly the space needed for the box. This behavior can be changed by enlarging (or shrinking) the bounding box. If the bounding box is enlarged, the `tcolorbox` will get some clearance around it. If the bounding box is shrunk, i.e. enlarged with negative values, the `tcolorbox` will overlap to other parts of the page. For example, the `tcolorbox` could be stretched into the page margin.

The following examples use `/tcb/show bounding box`→P. 120 to display the actual bounding box. For this, the library ⧉ skins has to be included and `/tcb/enhanced`→P. 142 has to be set.

`/tcb/enlarge top initially by`=⟨*length*⟩   (no default, initially `0mm`)
Enlarges the bounding box distance to the top of the box by ⟨*length*⟩. If the box is *breakable*, only the first box of the break sequence gets enlarged. `/tcb/enlarge top by`→P. 61 overwrites this key.

```
\tcbset{colframe=blue!75!black,colback=white}

\begin{tcolorbox}[enlarge top initially by=-5mm]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
\begin{tcolorbox}[enlarge top initially by=5mm,enhanced,show bounding box]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a **tcolorbox**.

This is a **tcolorbox**.

`/tcb/enlarge bottom finally by`=⟨*length*⟩   (no default, initially `0mm`)
Enlarges the bounding box distance to the bottom of the box by ⟨*length*⟩. If the box is *breakable*, only the last box of the break sequence gets enlarged. `/tcb/enlarge bottom by`→P. 61 overwrites this key.

```
\tcbset{colframe=blue!75!black,colback=white}

\begin{tcolorbox}[enlarge bottom finally by=5mm]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
\begin{tcolorbox}[enlarge bottom finally by=-5mm,enhanced,show bounding box]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a **tcolorbox**.

This is a **tcolorbox**.

/tcb/enlarge top at break by=⟨*length*⟩ (no default, initially 0mm)
Enlarges the bounding box distance to the top of the box by ⟨*length*⟩, *if* the box is `/tcb/breakable`^{→P. 246}. In this case, it is applied to *middle* and *last* parts in a break sequence. `/tcb/enlarge top by` overwrites this key.

/tcb/enlarge bottom at break by=⟨*length*⟩ (no default, initially 0mm)
Enlarges the bounding box distance to the bottom of the box by ⟨*length*⟩, *if* the box is `/tcb/breakable`^{→P. 246}. In this case, it is applied to *first* and *middle* parts in a break sequence. `/tcb/enlarge bottom by` overwrites this key.

/tcb/enlarge top by=⟨*length*⟩ (no default, initially 0mm)
Enlarges the bounding box distance to the top of the box by ⟨*length*⟩. `/tcb/enlarge top initially by`^{→P. 60} and `/tcb/enlarge top at break by` are set to ⟨*length*⟩.

/tcb/enlarge bottom by=⟨*length*⟩ (no default, initially 0mm)
Enlarges the bounding box distance to the bottom of the box by ⟨*length*⟩. `/tcb/enlarge bottom finally by`^{→P. 60} and `/tcb/enlarge bottom at break by` are set to ⟨*length*⟩.

/tcb/enlarge left by=⟨*length*⟩ (no default, initially 0mm)
Enlarges the bounding box distance to the left side of the box by ⟨*length*⟩.

```
\tcbset{colframe=blue!75!black,colback=white}

\begin{tcolorbox}[enlarge left by=2cm,width=5cm,enhanced,show bounding box]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
\begin{tcolorbox}[enlarge left by=-2cm,width=\linewidth+2cm]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a **tcolorbox**.

This is a **tcolorbox**.

/tcb/enlarge right by=⟨*length*⟩ (no default, initially 0mm)
Enlarges the bounding box distance to the right side of the box by ⟨*length*⟩.

```
\tcbset{colframe=blue!75!black,colback=white}

\begin{tcolorbox}[enlarge right by=-2cm,width=\linewidth+2cm,
  enhanced,show bounding box]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
\begin{tcolorbox}[enlarge right by=2cm,width=\linewidth-2cm]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a **tcolorbox**.

This is a **tcolorbox**.

/tcb/enlarge by=⟨*length*⟩ (no default, initially 0mm)

Enlarges the bounding box distance to all sides of the box by ⟨*length*⟩.

```
\tcbset{colframe=blue!75!black,colback=white,width=5cm,nobeforeafter}

\begin{tcolorbox}
This is a \textbf{tcolorbox}.
\end{tcolorbox}
\begin{tcolorbox}[enlarge by=5mm,enhanced,show bounding box]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a **tcolorbox**.

This is a **tcolorbox**.

/tcb/grow to left by=⟨*length*⟩ (no default, initially 0mm)

Enlarges the current box size by ⟨*length*⟩ and enlarges (shrinks) the bounding box distance to the left side of the box by −⟨*length*⟩.

```
\tcbset{colframe=blue!75!black,colback=white}

\begin{tcolorbox}[width=5cm,grow to left by=2cm,enhanced,show bounding box]
This is a \textbf{tcolorbox} with a width of 7cm.
\end{tcolorbox}
```

This is a **tcolorbox** with a width of 7cm.

/tcb/grow to right by=⟨*length*⟩ (no default, initially 0mm)

Enlarges the current box size by ⟨*length*⟩ and enlarges (shrinks) the bounding box distance to the right side of the box by −⟨*length*⟩.

```
\tcbset{colframe=blue!75!black,colback=white}

\begin{tcolorbox}[grow to right by=2cm,enhanced,show bounding box]
This is a \textbf{tcolorbox}.
\end{tcolorbox}

\bigskip

\begin{tcolorbox}[grow to right by=2cm,grow to left by=1cm,
  enhanced,show bounding box]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

This is a **tcolorbox**.

This is a **tcolorbox**.

Floating box from `toggle enlargement`

This page is an odd page. Therefore, the left and right enlargements are not toggled (with some luck; otherwise use `forced`). This box stretches to the right margin on odd pages and to the left margin on even pages. The current document is one-sided – this feature makes sense for two-sided documents only.

`/tcb/toggle enlargement`=⟨*toggle preset*⟩ (default `evenpage`, initially `none`)

According to the ⟨*toggle preset*⟩, the left and the right enlargements of the bounding box are switched or not. Feasible values are:

- **`none`**: no switching.
- **`forced`**: the values of the left and right enlargement are switched.
- **`evenpage`**: if the page is an even page, the values of the left and right enlargement are switched. It is recommended that one use this setting in conjunction with `/tcb/check odd page`→ P. 73.

```
% \usepackage{changepage} for 'check odd page'
\tcbset{colframe=blue!75!black,colback=white,
  grow to left by=20mm,grow to right by=-5mm}

\begin{tcolorbox}[toggle enlargement=none,enhanced,show bounding box]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
\begin{tcolorbox}[toggle enlargement=forced]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
\begin{tcolorbox}[toggle enlargement=evenpage,check odd page]
  This page is an \ifthenelse{\isodd{\thepage}}{odd}{even} page.
  Therefore, the left and right enlargements
  \ifthenelse{\isodd{\thepage}}{are not}{are} toggled.
\end{tcolorbox}
```

This is a **tcolorbox**.

This is a **tcolorbox**.

This page is an odd page. Therefore, the left and right enlargements are not toggled.

```
% \usepackage{changepage} for 'check odd page'
\begin{tcolorbox}[colframe=red!60!black,colback=red!15!white,check odd page,
  fonttitle=\bfseries,title=Floating box from \texttt{toggle enlargement},
  width=\textwidth,grow to right by=2cm,toggle enlargement=evenpage,float=t]
  This page is an \ifthenelse{\isodd{\thepage}}{odd}{even} page.
  Therefore, the left and right enlargements
  \ifthenelse{\isodd{\thepage}}{are not}{are} toggled (with some luck; otherwise
  use |forced|). This box stretches to the right margin on odd pages and to the left
  margin on even pages. The current document is one-sided -- this feature makes
  sense for two-sided documents only.
\end{tcolorbox}
```

The following keys should not be used with breakable boxes or boxes with a lower part.

/tcb/shrink tight (style, no value, initially unset)

The total colored box is shrunk to the dimensions of the upper part. There should be no lower part and no title. This style sets the `/tcb/boxsep`[→P. 24] to `0pt` and other geometry keys to fitting values. This option is likely to be used with the following extrusion keys.

```
\tcbset{colframe=blue!75!black,colback=white,arc=0mm,boxrule=0.4pt,
        nobeforeafter,tcbox raise base,shrink tight}

\begin{tcolorbox}
This is a \textbf{tcolorbox}.
\end{tcolorbox}

Lorem \tcbox{ipsum} dolor sit amet, consectetuer adipiscing elit.
```

This is a **tcolorbox**.
Lorem ipsum dolor sit amet, consectetuer adipiscing elit.

/tcb/extrude left by=⟨*length*⟩ (style, no default, initially unset)

The (upper part of the) colored box is extruded by the given ⟨*length*⟩ to the left side. The inner width and the bounding box is kept unchanged and the operation is additiv!

```
\tcbset{enhanced,colframe=red,colback=yellow!25!white,
  frame style={opacity=0.25},interior style={opacity=0.5},
  nobeforeafter,tcbox raise base,shrink tight,extrude by=2mm}

Mauris ut leo.

3.13 Layered Boxes and Every Box Settings

A `tcolorbox` may contain another `tcolorbox` and so on. The package takes track of the nesting level using a counter `tcblayer`. Counter values may be used for doing some fancy things, but you should never change the counter value yourself.

The package takes special care for the first four layers or nesting levels, called managed layers. Here, footnote texts are administrated to find their intended place and specific layer dependent options may be set by changing `/tcb/every box on layer n`[→P. 67]. If needed, the number of managed layers can be increased by setting `\tcbsetmanagedlayer`[→P. 67] to a higher value than 4.

The following styles have a considerable influence on how layered boxes are processed. Note especially that nested boxes are getting a `/tcb/reset`[→P. 74] by default. You can change this, but be prepared for suprises if you do.

If the defaults are *not changed*, a `tcolorbox` gets its options in the following order. Following options overwrite preceding options.

1. On package load, all options are set to default values.

2. Every `\tcbset`[→P. 10] command adds or changes options for the following boxes inside the current TₑX group.

3. While entering a `tcolorbox`, a `/tcb/every box on layer n`[→P. 67] or `/tcb/every box on higher layers`[→P. 67] option list is applied. With default settings this means:

   - For layer 1 (lowest layer), the `/tcb/every box` option list is applied. Not overwritten options given by a preceding `\tcbset`[→P. 10] survive.

   - For layer 2 and above (nested boxes), a `/tcb/reset`[→P. 74] followed by `/tcb/every box` option list is applied. Every resettable options given by a preceding `\tcbset`[→P. 10] and by the sourrounding box(es) are reset.

4. The ⟨*options*⟩ given to the `tcolorbox` are applied. Or, if the box was generated by `\newtcolorbox`[→P. 12] or friends, the ⟨*options*⟩ given there are applied.

5. If the box was generated by `\newtcolorbox`[→P. 12] or friends, some automated options are applied.

`/tcb/every box` (style)

   By default, this style is empty.

   ```
   % default setting:
   \tcbset{every box/.style={}}
   ```

   It may be changed by redefining this style.

   ```
   % setting all boxes to be enhanced:
   \tcbset{every box/.style={enhanced}}
   ```

   The alternative for setting something for every box (on every layer) is `\tcbsetforeverylayer`[→P. 10]:

   ```
   % setting all boxes to be enhanced:
   \tcbsetforeverylayer{enhanced}
   ```

/tcb/every box on layer n (style)

Here, n has to be replaced by a number ranging from 1 to the highest managed layer number (4 by default).

```
% default settings:
\tcbset{
  every box on layer 1/.style={every box},
  every box on layer 2/.style={reset,every box},
  every box on layer 3/.style={reset,every box},
  every box on layer 4/.style={reset,every box},
  }
```

/tcb/every box on higher layers (style)

Higher layers are layers above the highest managed layer number (4 by default).

```
\tcbset{every box on higher layers/.style={reset,every box}}
```

\tcbsetmanagedlayer{⟨*number*⟩}

Replaces the highest managed layer number by ⟨*number*⟩ where 4 is the default. This macro can only be used inside the preamble. Using a ⟨*number*⟩ lower than 4 typically makes no sense, but is not forbidden.

```
% \usepackage{lipsum}

3.14 Capture Mode

/tcb/capture=⟨*mode*⟩   (no default, initially `minipage`)

The capture ⟨*mode*⟩ defines how the box content is processed.

Feasible values for ⟨*mode*⟩ are:

- **minipage**:
  This is the default ⟨*mode*⟩ for `tcolorbox`[→P.9]. The content may have an upper and a lower part. Optionally, the box can be `/tcb/breakable`[→P.246]. The box content is put into a minipage or into something similar to a minipage.
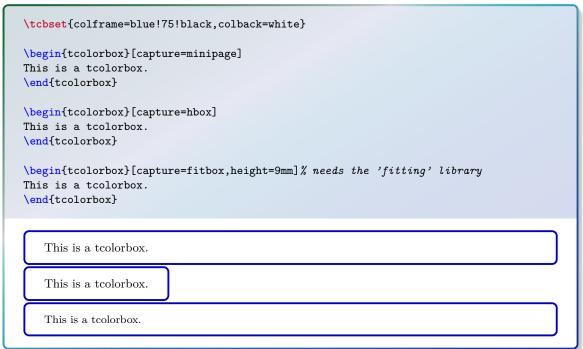

- **hbox**:
  This is the default ⟨*mode*⟩ for `\tcbox`[→P.11]. The content cannot have a lower part and cannot be broken. The colored box is sized according to the dimensions of the content. A shortcut to set this mode is `/tcb/hbox`.

- **fitbox**: (needs the LIB fitting library)
  This is the default ⟨*mode*⟩ for `\tcboxfit`[→P.260]. The content cannot have a lower part and cannot be broken. The content is sized according to the dimensions of the colored box. A shortcut to set this mode is `/tcb/fit`[→P.262].

```
\tcbset{colframe=blue!75!black,colback=white}

\begin{tcolorbox}[capture=minipage]
This is a tcolorbox.
\end{tcolorbox}

\begin{tcolorbox}[capture=hbox]
This is a tcolorbox.
\end{tcolorbox}

\begin{tcolorbox}[capture=fitbox,height=9mm]% needs the 'fitting' library
This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

This is a tcolorbox.

This is a tcolorbox.

/tcb/hbox   (style, no default)

Shortcut for `capture=hbox`.

```
\tcbset{colframe=blue!75!black,colback=white}

\begin{tcolorbox}[hbox]
This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/minipage   (style, no default)

Shortcut for `capture=minipage`.

3.15 Text Characteristics

/tcb/parbox=true|false   (default `true`, initially `true`)

> The text inside a `tcolorbox` is formatted using a LATEX `minipage` if the box is unbreakable. If breakable, the box tries a mimicry of a `minipage`. In a `minipage` or `parbox`, paragraphs are formatted slightly different as the main text. If the key value is set to `false`, the normal main text behavior is restored. In some situations, this has some unwanted side effects. It is recommended that one use this experimental setting only where you really want to have this feature.

```
% \usepackage{lipsum}  % preamble
\tcbset{width=(\linewidth-2mm)/2,nobeforeafter,arc=1mm,
  colframe=blue!75!black,colback=white,fonttitle=\bfseries,fontupper=\small,
  left=2mm,right=2mm,top=1mm,bottom=1mm,equal height group=parbox}

\begin{tcolorbox}[parbox,adjusted title={parbox=true (normal)}]
  \lipsum[1-2]
\end{tcolorbox}\hfill%
\begin{tcolorbox}[parbox=false,adjusted title={parbox=false}]
  \lipsum[1-2]
\end{tcolorbox}%
```

parbox=true (normal)

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. Pellentesque cursus luctus mauris.

/tcb/hyphenationfix=true|false   (default `true`, initially `false`)

Long words at the beginning of paragraphs in very narrow boxes will not be hyphenated using `pdflatex`. This problem is circumvented by applying the `hyphenationfix` option.

```
\tcbset{colframe=blue!75!black,
  fontupper=\normalsize,
  colback=blue!5!white,width=4cm}

\begin{tcolorbox}
Rechnungsadjunktentochter.\par
Statthaltereikonzipist.
\end{tcolorbox}

\begin{tcolorbox}[hyphenationfix]
Rechnungsadjunktentochter.\par
Statthaltereikonzipist.
\end{tcolorbox}
```

> Rechnungsadjunktentochter.
> Statthaltereikonzipist.

> Rechnungsad-
> junktentochter.
> Statthal-
> tereikonzipist.

> `parbox=false` and `hyphenationfix` should not be used together. They are targeting different box types and they do not blend very well.

3.16 Files

/tcb/tempfile=⟨*file name*⟩   (no default, initially `\jobname.tcbtemp`)

Sets ⟨*file name*⟩ as name for the temporary file which is used inside `tcbwritetemp`[→P.80] and `\tcbusetemp`[→P.80] implicitely.

3.17 \tcbox Specials

The following options are applicable for `\tcbox`[→P.11] and `\tcboxmath`[→P.224] only.

/tcb/tcbox raise=⟨*length*⟩   (no default, initially `0pt`)

Raises the `\tcbox`[→P.11] by the given ⟨*length*⟩.

```
\tcbset{colframe=blue!50!black,colback=white,colupper=red!50!black,
        fonttitle=\bfseries,nobeforeafter,center title}

Test\dotfill
\tcbox[tcbox raise base]{Hello World 1}\dotfill
\tcbox{Hello World 2}\dotfill
\tcbox[tcbox raise=5mm]{Hello World 3}
```

> Hello World 3
>
> Hello World 2
>
> Test . . . . . .   Hello World 1   . . . .

/tcb/tcbox raise base   (style, no value, initially unset)

Raises the `\tcbox`[→P.11] such that the base of its content matches the base of the environmental line; see example above.

/tcb/on line   (style, no value, initially unset)

Combines /tcb/tcbox raise base with /tcb/nobeforeafter[→P.59]. The resulting box behaves analogue to `\fbox`.

3.18 Counters, Labels and References

/tcb/phantom=⟨*code*⟩ (no default, initially unset)

The ⟨*code*⟩ is put in a box at the upper left corner of the `tcolorbox`. If the `tcolorbox` is breakable, the ⟨*code*⟩ is executed for the first box of the break sequence only. If there already was some phantom code given, the new ⟨*code*⟩ is appended.

The ⟨*code*⟩ is intended to be used for counter stepping, labelling, and related operations which do not produce visible text.

- The ⟨*code*⟩ is executed before the title and box content, i. e. counter values are ensured to be increased before usage.
- Labels are ensured to reference the correct page number.
- The ⟨*code*⟩ is executed only once even during fitting operations for title and box content.
- In combination with the `hyperref` package, the hyper anchor is set to the upper left corner of the `tcolorbox`, i. e. links inside the pdf document will jump to the box pleasantly.
- Since the ⟨*code*⟩ is executed inside a TEX group, only global operations can survive this group.

Examples for the `phantom` usage are given in Section 9.8 from page 216, e. g. Example 9.1 on page 217.

/tcb/nophantom (no value, initially set)

Removes the phantom code if set before.

/tcb/label=⟨*marker*⟩ (no default, initially unset)

The ⟨*marker*⟩ is set as label text for a reference with the `\ref` macro. Typically, this option is used for numbered boxes, see Subsection 4.1 from page 75, e. g. `/tcb/new/auto counter`^{→ P. 75}.

/tcb/label type=⟨*type*⟩ (no default, initially unset)

This option key can be used only in conjunction with the `cleveref` package [5] which has to be loaded separately. ⟨*type*⟩ has to be a cross-reference type *known* to `cleveref` like `theorem`, `algorithm`, `result`, etc. References made with `cleveref` will use this type. Note that using `label type` will result in compilation errors, if `cleveref` is not loaded. For an example, see Theorem 10.3.5 on page 241.

/tcb/no label type (no value, initially set)

Removes a `/tcb/label type`, if set before.

/tcb/step=⟨*counter*⟩ (no default, initially unset)

Shortcut for `phantom={\refstepcounter{#1}}`. The given ⟨*counter*⟩ is increased and ready for labelling. This option is not needed when using the convenient automated numbering introduced with version 2.40, see Subsection 4.1 from page 75.

/tcb/step and label={⟨*counter*⟩}{⟨*marker*⟩} (no default, initially unset)

Shortcut for using `/tcb/step` and `/tcb/label`. This option is not needed when using the convenient automated numbering introduced with version 2.40, see Subsection 4.1 from page 75.

/tcb/list entry=⟨*text*⟩ (no default, initially unset)

If the «list of tcolorbox(es)» feature described in Subsection 4.2 from page 79 is used, this key describes the ⟨*text*⟩ for an entry into the generated list, e. g.

```
list entry={\protect\numberline{\thetcbcounter}My beautiful Example}
```

See Section 9.8 from page 216 for a complete example.

/tcb/add to list={⟨*list*⟩}{⟨*type*⟩} (no default, initially unset)

If the «list of tcolorbox(es)» feature described in Subsection 4.2 from page 79 is used, list entries are generated automatically. With this key, you can enforce an entry to the given ⟨*list*⟩ with the given ⟨*type*⟩. This issues:
\addcontentsline{⟨*list*⟩}{⟨*type*⟩}{⟨*entry text*⟩}

/tcb/check odd page=true|false (default `true`, initially `false`)

If set to `true`, the even/odd page testing from the package `changepage` is applied. The /tcb/toggle enlargement→P.63 check and the /tcb/toggle left and right→P.31 check will use the \ifoddpage macro from this package. This options is independent from /tcb/phantom→P.72. Note that you have to include the package `changepage` by hand[2]:

```
\usepackage{changepage}
\strictpagecheck
```

The macro \ifoddpage can be used inside overlay or watermark code to test if the box is on an odd page. This will work also for boxes in a break sequence. Note that you cannot use the test inside the normal box content.

```
% \usepackage{changepage}
\tcbset{colframe=blue!75!black,colback=white}

\begin{tcolorbox}[enhanced,check odd page,
  watermark text={\ifoddpage Odd\else Even\fi\ page!}]
\lipsum[1]
\end{tcolorbox}
```

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. Nam arcu libero, nonummy eget, consectetuer id, vulputate a, magna. Donec vehicula augue eu neque. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Mauris ut leo. Cras viverra metus rhoncus sem. Nulla et lectus vestibulum urna fringilla ultrices. Phasellus eu tellus sit amet tortor gravida placerat. Integer sapien est, iaculis in, pretium quis, viverra ac, nunc. Praesent eget sem vel leo ultrices bibendum. Aenean faucibus. Morbi dolor nulla, malesuada eu, pulvinar at, mollis ac, nulla. Curabitur auctor semper nulla. Donec varius orci eget risus. Duis nibh mi, congue eu, accumsan eleifend, sagittis quis, diam. Duis eget orci sit amet orci dignissim rutrum.

---

[2]If `changepage` is not included, a compilation error will arise.

3.19 Externalization

If the *externalization* library of the `tikz` package is used and `/tcb/graphical environment`^{→P. 81} is set to `tikzpicture`, a `tcolorbox` could trigger the externalization process which will arise a compilation error.

To avoid this, there are two possible strategies:

- Ensure, that `\tikzexternaldisable` is set before a `tcolorbox` is used. If you typically use the pattern `\tikzexternalenable` *some picture* `\tikzexternaldisable`, there is nothing to care about.

- If *externalization* is enabled globally, use `/tcb/shield externalize` to shield any `tcolorbox`. The preamble code could look like this:

```
\usetikzlibrary{external}
\tikzexternalize
\tcbset{shield externalize}
```

`/tcb/shield externalize``=true|false`   (default `true`, initially `false`)

If set to `true`, the drawing part of the `tcolorbox` is not being externalized which is a good thing at the current state of art. Nevertheless, if the `tcolorbox` contains a `tikzpicture`, this picture is still externalized. Pictures drawn with help of `/tcb/tikz upper`^{→P. 47} or alike are *not* externalized.

If a `tcolorbox` is used inside a node of an encircling `tikzpicture` which is externalized, do *not* use `\tikzexternaldisable` in front of the `tcolorbox`. `/tcb/shield externalize` is deactivated automatically inside a `tikzpicture`.

`/tcb/external``=⟨file name⟩`   (no default, initially unset)

Convenience option which calls `\tikzsetnextfilename{⟨file name⟩}`. Typically, it may be used inside the option list of a `tcolorbox` to set the externalization ⟨*file name*⟩ for the first `tikzpicture` which is discovered *inside* the box content. The package `tikz` [19] or the library `LIB skins` has to be loaded to use this option. Additionally, `\usetikzlibrary{external}` has to be used.

`/tcb/remake``=true|false`   (default `true`, initially `false`)

Convenience option which calls `/tikz/external/remake next`. Typically, it may be used inside the option list of a `tcolorbox` to force the remake of the first `tikzpicture` which is discovered *inside* the box content. The package `tikz` [19] or the library `LIB skins` has to be loaded to use this option. Additionally, `\usetikzlibrary{external}` has to be used.

3.20 Miscellaneous

`/tcb/reset`   (no value, initially set)

Sets (nearly) all `tcolorbox` settings (including loaded libraries) back to their default values *plus* any settings given by `\tcbsetforeverylayer`^{→P. 10}. `/tcb/savedelimiter`^{→P. 18} and `/tcb/capture`^{→P. 69} keep their values. This option is useful for boxes in boxes where the inner box should not inherit the settings of the outer box. Note that for boxes inside boxes the `reset` is done automatically, if the standard settings of the package are used (v2.40 and above), see Section 3.13 from page 66.

4 Initialization Option Keys

The *initialization* options are only applicable for the generation of new environments and commands based on `tcolorbox` and friends. Particularly, they can be used for

- `\newtcolorbox`[→P.12],
- `\newtcbox`[→P.13],
- `\newtcblisting`[→P.194],
- `\newtcbinputlisting`[→P.196],
- `\newtcbtheorem`[→P.222], and
- `\newtcboxfit`[→P.261].

Typically, these options may generate counters and alike. It is **strongly** recommended that one use initialization options inside the preamble only. Otherwise, you may get trouble when using LATEX's `\include` features.

4.1 Numbered Boxes

Counters assigned using the initialization options are administrated automatically. Especially, they are increased for each new box. Independent from the real counter name, the counter value can be referenced by `\thetcbcounter`, e.g. inside the title of the box. The real counter name is stored inside `\tcbcounter`.

/tcb/new/auto counter (no value, initially unset)

Creates a new counter automatically. With `/tcb/new/number format`[→P.77] and `/tcb/new/number within`[→P.77], the appearance and behavior of the counter can be changed. The counter value is referenced by `\thetcbcounter`.

Definition in the preamble:

```
\newtcolorbox[auto counter,number within=section]{pabox}[2][]{%
  colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries,
  title=Examp.~\thetcbcounter: #2,#1}
```

```
\begin{pabox}[label={myautocounter}]{Title with number}
This box is automatically numbered with \ref{myautocounter} on page
\pageref{myautocounter}. Inside the box, the \thetcbcounter\ can
also be referenced by |\thetcbcounter|.
The real counter name is \texttt{\tcbcounter}.
\end{pabox}
```

> **Examp. 4.1: Title with number**
>
> This box is automatically numbered with 4.1 on page 75. Inside the box, the 4.1 can also be referenced by `\thetcbcounter`. The real counter name is `tcb@cnt@pabox`.

/tcb/new/use counter from=⟨*tcolorbox*⟩ (no default, initially unset)

Here, a counter from another ⟨*tcolorbox*⟩ is reused. Note that the setting for /tcb/new/number format[→P.77] and /tcb/new/number within[→P.77] are inherited and cannot be changed. The counter value is referenced by `\thetcbcounter`.

```
\newtcolorbox[use counter from=pabox]{mybox}[2][]{%
colback=blue!5!white,colframe=blue!75!black,fonttitle=\bfseries,
title=Some Box \thetcbcounter: #2,#1}

\begin{mybox}[label={myusecounterfrom}]{Title with continued number}
This box is automatically numbered with \ref{myusecounterfrom} on page
\pageref{myusecounterfrom}. Inside the box, the \thetcbcounter\ can
also be referenced by |\thetcbcounter|.
The real counter name is \texttt{\tcbcounter}.
\end{mybox}
```

> **Some Box 4.2: Title with continued number**
>
> This box is automatically numbered with 4.2 on page 76. Inside the box, the 4.2 can also be referenced by `\thetcbcounter`. The real counter name is `tcb@cnt@pabox`.

/tcb/new/use counter=⟨*counter*⟩ (no default, initially unset)

Here, an ordinary existing LaTeX counter is used for numbering. With /tcb/new/number format[→P.77] and /tcb/new/number within[→P.77], the appearance and behavior of the counter can be changed. The counter value is referenced by `\thetcbcounter`.

```
% \newcounter{myexample}%  preamble
\newtcolorbox[use counter=myexample,number format=\Alph]{mybox}[2][]{%
colback=green!5!white,colframe=green!55!black,fonttitle=\bfseries,
title=Some Box \thetcbcounter: #2,#1}

\begin{mybox}[label={myusecounter}]{Title with \LaTeX\ number}
This box is automatically numbered with \ref{myusecounter} on page
\pageref{myusecounter}. Inside the box, the \thetcbcounter\ can
also be referenced by |\thetcbcounter|.
The real counter name is \texttt{\tcbcounter}.
\end{mybox}
```

> **Some Box A: Title with LaTeX number**
>
> This box is automatically numbered with A on page 76. Inside the box, the A can also be referenced by `\thetcbcounter`. The real counter name is `myexample`.

/tcb/new/no counter (no value, initially set)

The created boxes are not numbered. This is the default. The option may be used to overrule a previous option.

/tcb/new/number within=⟨*counter*⟩ (no default, initially unset)
    The automatic counter is set to zero, if ⟨*counter*⟩ is increased. Additionally, during output,
    the value of ⟨*counter*⟩ is prepended to the value of the automatic counter.
    To prepend the automatic counter with the chapter number and to reset it with every new
    chapter, use:

```
number within=chapter
```

See for a complete example.

/tcb/new/number format=⟨*format macro*⟩ (no default, initially **\arabic**)
    Declares the format of the automatic counter. The ⟨*format macro*⟩ can be any valid LaTeX
    number formatting macro like **\arabic**, **\roman**, etc.
    To display the counter value in large roman numbers, use:

```
number format=\Roman
```

See for a complete example.

/tcb/new/number freestyle=⟨*code*⟩ (no default, initially unset)
    Allows advanced control over the complete number format. This option overrules the format
    given by /tcb/new/number within and /tcb/new/number format. Nevertheless, you can
    combine it with /tcb/new/number within to get the desired reset property.
    The ⟨*code*⟩ is some formatting code which should contain **\tcbcounter** to reference the
    automated counter. Since this ⟨*code*⟩ is expanded, you have to secure each macro with
    \noexpand with *exception* of **\tcbcounter**.

Definition in the preamble:

```
\newtcolorbox[auto counter,number within=section,
  number freestyle={(Q/\noexpand\thesection/\noexpand\Alph{\tcbcounter})},
  ]{phbox}[2][]{%
  colback=yellow!15!white,colframe=blue!75!black,fonttitle=\bfseries,
  title=Question~\thetcbcounter: #2,#1}
```

```
\begin{phbox}[label={myfreestyle}]{Title with freestyle number}
This box is automatically numbered with \ref{myfreestyle} on page
\pageref{myfreestyle}. Inside the box, the \thetcbcounter\ can
also be referenced by |\thetcbcounter|.
The real counter name is \texttt{\tcbcounter}.
\end{phbox}
```

> **Question (Q/4/A): Title with freestyle number**
>
> This box is automatically numbered with (Q/4/A) on page 77. Inside the box, the (Q/4/A)
> can also be referenced by **\thetcbcounter**. The real counter name is `tcb@cnt@phbox`.

> The following options `/tcb/new/crefname` and `/tcb/new/Crefname` need to be set inside the preamble.

/tcb/new/crefname={⟨*singular*⟩}{⟨*plural*⟩} (no default, initially unset)

This option key can be used only in conjunction with the `cleveref` package [5] which has to be loaded separately. It creates a cross-reference type for the new `tcolorbox`'es, where the lowercase ⟨*singular*⟩ and ⟨*plural*⟩ forms of the cross-reference are given. See `/tcb/label type`$^{→P.72}$ and [5] for more information.

/tcb/new/Crefname={⟨*singular*⟩}{⟨*plural*⟩} (no default, initially unset)

This option key can be used only in conjunction with the `cleveref` package [5] which has to be loaded separately. It creates a cross-reference type for the new `tcolorbox`'es, where the uppercase ⟨*singular*⟩ and ⟨*plural*⟩ forms of the cross-reference are given. See `/tcb/label type`$^{→P.72}$ and [5] for more information.

Definition in the preamble:

```
% \usepackage{cleveref}
\newtcolorbox[auto counter,number within=section,
  Crefname={Bluebox}{Blueboxes},crefname={bluebox}{blueboxes}]%
  {mybluebox}[2][]{colback=blue!5!white,colframe=blue!75!black,fonttitle=\bfseries,
    title=Bluebox \thetcbcounter: #2,#1}
```

```
% \usepackage{cleveref}
% \usepackage{varioref}
\begin{mybluebox}[label={myreference}]{My title}
This is an example.
\end{mybluebox}

\Cref{myreference}, \cref{myreference}.\\
\Cpageref{myreference}, \cpageref{myreference}.\\
\nameCref{myreference}, \namecref{myreference}.\\
\labelcref{myreference}, \labelcpageref{myreference}.\\
With \texttt{varioref}:\\
\Vref{myreference}, \vref{myreference}.\\
\Vref*{myreference}, \vref*{myreference}.
```

Bluebox 4.1: My title

This is an example.

Bluebox 4.1, bluebox 4.1.
Page 78, page 78.
Bluebox, bluebox.
4.1, 78.
With `varioref`:
Bluebox 4.1, bluebox 4.1.
Bluebox 4.1, bluebox 4.1.

4.2 Lists of `tcolorboxes`

For figures and tables, LATEX provides the `\listoffigures` and `\listoftables` commands to create lists of these numbered entities. Also, a `tcolorbox` can be part of such a kind of list.

1. Assign a list ⟨*name*⟩ by the *initialization* option `/tcb/new/list inside`.

2. Optionally, a new ⟨*type*⟩ for list entries may be assigned by the *initialization* option `/tcb/new/list type`.

3. List entries a generated automatically within each new `tcolorbox` using the above initialization.

   - If `/tcb/list entry`→P. 73 is set, the entry is generated with it.

   - Otherwise, if `/tcb/title`→P. 14 is set, the entry is generated with it.

   - Otherwise, the entry is generated with the current number and the environment name.

4. The generated list is displayed by `\tcblistof`.

`/tcb/new/list inside`=⟨*name*⟩   (no default, initially unset)
> Assigns a list or contents file to the generated `tcolorbox`es. Entries to this list are saved to a file which gets the ⟨*name*⟩ as file name extension. The list is referenced by this name in `\tcblistof`. For example:

```
list inside=exam
```

> See Section 9.8 from page 216 for a complete example.

`/tcb/new/list type`=⟨*type*⟩   (no default, initially `tcolorbox`)
> Optionally, some ⟨*type*⟩ can be assigned to the list entries. For a new ⟨*type*⟩, a macro `\l@`⟨*type*⟩ has to exist which controls the format of the list entry. The default type is defined by

```
\newcommand*\l@tcolorbox{\@dottedtocline{1}{1.5em}{2.3em}}
```

> This is identical to the `\l@section` setting of LATEX. `\l@tcolorbox` can be redefined or a new ⟨*type*⟩ can be assigned.

`\tcblistof`[⟨*macro*⟩]{⟨*name*⟩}{⟨*title text*⟩}
> Displays the generated list of `tcolorbox`es with the given ⟨*name*⟩. The heading is generated by ⟨*macro*⟩{⟨*title text*⟩} where `\section` is the default setting for ⟨*macro*⟩.
> To display the list inside a subsection, use for example:

```
\tcblistof[\subsection]{exam}{List of Exercises}
```

> The result of the example is found as Subsection 9.9 on page 219.
> The core of the list is generated by `\@starttoc{`⟨*name*⟩`}` which can be wrapped into an own macro.

5   Saving and Loading of Verbatim Texts

The following macros are slightly modified versions of the original macros from the known packages `moreverb` and `verbatim`. They are used implicitly inside of a `tcolorbox` environment, but they can be used outside also.

\begin{**tcbverbatimwrite**}{⟨*file name*⟩}
  ⟨*environment content*⟩
\end{**tcbverbatimwrite**}

> Saves the ⟨*environment content*⟩ to a file named by ⟨*file name*⟩. TₑX macros inside the environment are not expanded.

```
\begin{tcbverbatimwrite}{\jobname_verbexp.tex}
  This text is saved \textit{as is}.
\end{tcbverbatimwrite}

Now, we are using the file:\par
\input{\jobname_verbexp.tex}
```

> Now, we are using the file:
> This text is saved *as is*.

This environment may be used inside an own environment. Note, that inside the environment definition \tcbverbatimwrite has to be used instead of \begin{tcbverbatimwrite} and \endtcbverbatimwrite instead of \end{tcbverbatimwrite}.

```
\newenvironment{myverbatim}{%
  \begingroup\tcbverbatimwrite{\jobname_myverb.tex}}%
  {\endtcbverbatimwrite\endgroup}

\begin{myverbatim}
  This is the text which is saved by my own environment.
\end{myverbatim}

Now, we are using the file:\par
\input{\jobname_myverb.tex}
```

> Now, we are using the file:
> This is the text which is saved by my own environment.

\begin{**tcbwritetemp**}
  ⟨*environment content*⟩
\end{**tcbwritetemp**}

> Has the same function as `tcbverbatimwrite`, but uses the key value of `tempfile` for the file name.

```
\begin{tcbwritetemp}
  This text is saved \textit{as is}.
\end{tcbwritetemp}

Now, we are using the file:\par
\tcbusetemp
```

> Now, we are using the file:
> This text is saved *as is*.

\tcbusetemp

> Loads the current temporary file which was saved by `tcbwritetemp`.

6 Technical Overview and Customization

This section provides a technical overview of the skin concept of `tcolorbox`. For most applications of `tcolorbox`, one will not need to know the bells and whistles described herein. You may proceed to Section 7 on page 93 where the customization options for most users are documented.

The following explanations also cover options and settings from the `[LIB] skins` library, see Section 7 on page 93.

6.1 Skins and Drawing Engines

From a technical point of view, a *skin* is a style definition for the appearance of a `tcolorbox`. The core package provides some additional option keys for skins but only two skins called `standard`^{→P.140} and `standard jigsaw`^{→P.141}. The `[LIB] skins` library adds several more skins. To change to a skin, only one option from the core package has to be set.

`/tcb/skin`=⟨*name*⟩   (style, no default, initially `standard`)
  Sets the current skin to ⟨*name*⟩. This is a style definition which sets all the following keys, i. e. for many use cases there is nothing more to do.

```
\tcbset{colback=Salmon!50!white,colframe=FireBrick!75!black,
  width=(\linewidth-8mm)/2,before=,after=\hfill,equal height group=ske}

\begin{tcolorbox}[adjusted title=My title]
  This is my content.
\end{tcolorbox}
\begin{tcolorbox}[skin=beamer,beamer,adjusted title=My title]
  This is my content.
\end{tcolorbox}
```

> **My title**
>
> This is my content.

> **My title**
>
> This is my content.

`/tcb/skin first`=⟨*name*⟩   (style, no default, initially `standard`)
  If the box is set to be `/tcb/breakable`^{→P.246} and *is* broken actually, then the skin for the *first* part of the break sequence is set to ⟨*name*⟩, see Subsection 11.5 on page 251. Typically, this key is set by a `/tcb/skin`.

`/tcb/skin middle`=⟨*name*⟩   (style, no default, initially `standard`)
  If the box is set to be `/tcb/breakable`^{→P.246} and *is* broken actually, then the skin for the *middle* parts (if any) of the break sequence is set to ⟨*name*⟩, see Subsection 11.5 on page 251. Typically, this key is set by a `/tcb/skin`.

`/tcb/skin last`=⟨*name*⟩   (style, no default, initially `standard`)
  If the box is set to be `/tcb/breakable`^{→P.246} and *is* broken actually, then the skin for the *last* part of the break sequence is set to ⟨*name*⟩, see Subsection 11.5 on page 251. Typically, this key is set by a `/tcb/skin`.

`/tcb/graphical environment`=⟨*name*⟩   (no default, initially `pgfpicture`)
  Sets the graphical environment for the `tcolorbox` to ⟨*name*⟩. Feasible values are `pgfpicture` and `tikzpicture` or environments which inherit from one of these two. This key is set by a `/tcb/skin` and may seldom be used directly.

The skin of a `tcolorbox` is drawn by up to four *engines*. Afterwards, the text content is drawn which is not part of a skin. The four steps are:

1. The *frame* of the box, drawn by `/tcb/frame engine`.

2. The *interior* of the box. The interior of a box with title is drawn differently from a box without title. `/tcb/interior titled engine` or `/tcb/interior engine`^{→P. 83} is used to draw the interior.

3. The *segmentation* (line) of the box, if there is a lower part; drawn by `/tcb/segmentation engine`^{→P. 83}.

4. The *title area* of the box, if there is a title and `/tcb/title filled`^{→P. 19} is set to `true`; drawn by `/tcb/title engine`^{→P. 83}.

`/tcb/frame engine=`⟨*name*⟩   (no default, initially `standard`)

Sets the *frame* drawing engine for a box to ⟨*name*⟩. Typically, this key is set by a `/tcb/skin`^{→P. 81}. Feasible values for ⟨*name*⟩ are:
- `standard`: the original code from the core package,
- `path`: a `tikz` path which is controlled by `/tcb/frame style`^{→P. 93},
- `pathjigsaw`: a `tikz` path which is controlled by `/tcb/frame style`^{→P. 93},
- `pathfirst`: a `tikz` path which is controlled by `/tcb/frame style`^{→P. 93},
- `pathfirstjigsaw`: a `tikz` path which is controlled by `/tcb/frame style`^{→P. 93},
- `pathmiddle`: a `tikz` path which is controlled by `/tcb/frame style`^{→P. 93},
- `pathmiddlejigsaw`: a `tikz` path which is controlled by `/tcb/frame style`^{→P. 93},
- `pathlast`: a `tikz` path which is controlled by `/tcb/frame style`^{→P. 93},
- `pathlastjigsaw`: a `tikz` path which is controlled by `/tcb/frame style`^{→P. 93},
- `freelance`: deprecated.
- `spartan`: a quite spartan code.
- `empty`: draw nothing.

`/tcb/interior titled engine=`⟨*name*⟩   (no default, initially `standard`)

Sets the *interior* drawing engine for a titled box to ⟨*name*⟩. Typically, this key is set by a `/tcb/skin`^{→P. 81}. Feasible values for ⟨*name*⟩ are:
- `standard`: the original code from the core package,
- `path`: a `tikz` path which is controlled by `/tcb/interior style`^{→P. 94},
- `pathfirst`: a `tikz` path which is controlled by `/tcb/interior style`^{→P. 94},
- `pathmiddle`: a `tikz` path which is controlled by `/tcb/interior style`^{→P. 94},
- `pathlast`: a `tikz` path which is controlled by `/tcb/interior style`^{→P. 94},
- `freelance`: deprecated.
- `spartan`: a quite spartan code.
- `empty`: draw nothing.

/tcb/interior engine=⟨*name*⟩   (no default, initially `standard`)

Sets the *interior* drawing engine for an untitled box to ⟨*name*⟩. Typically, this key is set by a `/tcb/skin`→P.81. Feasible values for ⟨*name*⟩ are:

- `standard`: the original code from the core package,
- `path`: a `tikz` path which is controlled by `/tcb/interior style`→P.94,
- `pathfirst`: a `tikz` path which is controlled by `/tcb/interior style`→P.94,
- `pathmiddle`: a `tikz` path which is controlled by `/tcb/interior style`→P.94,
- `pathlast`: a `tikz` path which is controlled by `/tcb/interior style`→P.94,
- `freelance`: deprecated.
- `spartan`: a quite spartan code.
- `empty`: draw nothing.

/tcb/segmentation engine=⟨*name*⟩   (no default, initially `standard`)

Sets the *segmentation* (line) drawing engine for a box to ⟨*name*⟩. Typically, this key is set by a `/tcb/skin`→P.81. Feasible values for ⟨*name*⟩ are:

- `standard`: the original code from the core package,
- `path`: a `tikz` path which is controlled by `/tcb/segmentation style`→P.96,
- `freelance`: deprecated.
- `spartan`: a quite spartan code.
- `empty`: draw nothing.

/tcb/title engine=⟨*name*⟩   (no default, initially `standard`)
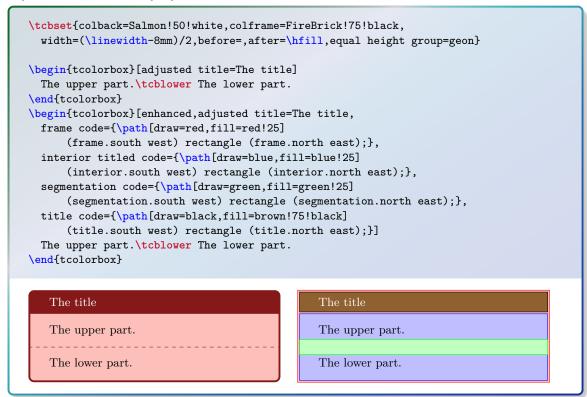

Sets the *title area* drawing engine for a titled box to ⟨*name*⟩. Typically, this key is set by a `/tcb/skin`→P.81. Feasible values for ⟨*name*⟩ are:

- `standard`: the original code from the core package,
- `path`: a `tikz` path which is controlled by `/tcb/title style`→P.96,
- `pathfirst`: a `tikz` path which is controlled by `/tcb/title style`→P.96,
- `pathmiddle`: a `tikz` path which is controlled by `/tcb/title style`→P.96,
- `pathlast`: a `tikz` path which is controlled by `/tcb/title style`→P.96,
- `freelance`: deprecated.
- `spartan`: a quite spartan code.
- `empty`: draw nothing.

> After an engine is set to an initializing value, the resulting graphical code can be changed using code option keys, see Section 6.2 on page 85.

/tcb/geometry nodes=true|false   (default `true`, initially `false`)

If set to `true`, up to four `tikz` nodes are defined for a `tcolorbox` which are named `frame`, `interior`, `segmentation`, and `title`. These nodes describe the boundaries of the equally named parts of a `tcolorbox`. They are used by most engines based on Ti*k*Z. Typically, this key is set automatically by a /tcb/skin^{→P.81}.

```
\tcbset{colback=Salmon!50!white,colframe=FireBrick!75!black,
  width=(\linewidth-8mm)/2,before=,after=\hfill,equal height group=geon}

\begin{tcolorbox}[adjusted title=The title]
  The upper part.\tcblower The lower part.
\end{tcolorbox}
\begin{tcolorbox}[enhanced,adjusted title=The title,
  frame code={\path[draw=red,fill=red!25]
      (frame.south west) rectangle (frame.north east);},
  interior titled code={\path[draw=blue,fill=blue!25]
      (interior.south west) rectangle (interior.north east);},
  segmentation code={\path[draw=green,fill=green!25]
      (segmentation.south west) rectangle (segmentation.north east);},
  title code={\path[draw=black,fill=brown!75!black]
      (title.south west) rectangle (title.north east);}]
  The upper part.\tcblower The lower part.
\end{tcolorbox}
```

The title	The title
The upper part.	The upper part.
The lower part.	The lower part.

6.2 Code Option Keys

The following code options are applicable for all skins. The used ⟨*graphical code*⟩ can be any
pgf code. For all skins with exception of standard^{→P.140} and standard jigsaw^{→P.141}, the
⟨*graphical code*⟩ can also be any Ti*k*Z code.

/tcb/frame code=⟨*graphical code*⟩   (code, default from standard)
The given ⟨*graphical code*⟩ is used for drawing the *frame* of the box.

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[enhanced,frame code={
  \foreach \n in {north east,north west,south east,south west}
  {\path [fill=red!75!black] (interior.\n) circle (3mm); }; }]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> This is a **tcolorbox**.
> --
> This is the lower part.

/tcb/frame empty   (style, no value)
This is a shortcut for setting /tcb/frame code to empty. This option removes the drawing
of the frame. Alternatively, use /tcb/frame hidden^{→P.94}.

/tcb/interior titled code=⟨*graphical code*⟩   (code, default from standard)
The given ⟨*graphical code*⟩ is used for drawing the *interior* of the box, if the box comes with
a title.

```
\tcbset{colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[enhanced,title=My title,interior titled code={
  \path[draw=red!5!white,line width=5mm,line cap=round]
    ([xshift=3mm,yshift=-3mm]interior.north west)
    --([xshift=-3mm,yshift=3mm]interior.south east)
    ([xshift=3mm,yshift=3mm]interior.south west)
    --([xshift=-3mm,yshift=-3mm]interior.north east);}]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> **My title**
> This is a **tcolorbox**.
> --
> This is the lower part.

/tcb/interior titled empty   (style, no value)
This is a shortcut for setting /tcb/interior titled code to empty. This option removes
the drawing of the untitled interior. Alternatively, use /tcb/interior hidden^{→P.95}.

/tcb/interior code=⟨*graphical code*⟩   (code, default from `standard`)

The given ⟨*graphical code*⟩ is used for drawing the *interior* of the box, if the box is without a title.

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[enhanced,interior code={
  \path[draw=red!5!white,line width=5mm,line cap=round]
    ([xshift=3mm,yshift=-3mm]interior.north west)
    --([xshift=-3mm,yshift=3mm]interior.south east)
    ([xshift=3mm,yshift=3mm]interior.south west)
    --([xshift=-3mm,yshift=-3mm]interior.north east);}]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> This is a **tcolorbox**.
>
> This is the lower part.

/tcb/interior empty   (style, no value)

This is a shortcut for setting `/tcb/interior code` to empty. This option removes the drawing of the interior. Alternatively, use `/tcb/interior hidden`[→P. 95].

/tcb/segmentation code=⟨*graphical code*⟩   (code, default from `standard`)

The given ⟨*graphical code*⟩ is used for drawing the *segmentation* area of the box.

```
\tcbset{colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[enhanced,title=My title,segmentation code={
  \path[top color=red!5!white,bottom color=red!5!white,middle color=blue]
  (segmentation.south west) rectangle (segmentation.north east);}]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> **My title**
>
> This is a **tcolorbox**.
>
> This is the lower part.

/tcb/segmentation empty   (style, no value)

This is a shortcut for setting `/tcb/segmentation code` to empty. This option removes the drawing of the segmentation line. Alternatively, use `/tcb/segmentation hidden`[→P. 96].

`/tcb/title code`=⟨*graphical code*⟩   (code, default from `standard`)

The given ⟨*graphical code*⟩ is used for drawing the *title* area of the box.

```
\tcbset{colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries,
  coltitle=black}

\begin{tcolorbox}[enhanced,title=My title,title code={
  \path[draw=yellow,solid,decorate,line width=2mm,
    decoration={coil,aspect=0,segment length=10.1mm}]
    ([xshift=1mm]title.west) -- ([xshift=-1mm]title.east);}]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

My title

This is a **tcolorbox**.

This is the lower part.

`/tcb/title empty`   (style, no value)

This is a shortcut for setting `/tcb/title code` to empty. This option removes the drawing of the title area. Alternatively, use `/tcb/title hidden`^{→P. 97}.

6.3 Subskins

A subskin is a new `/tcb/skin`→P.81 based on an existing skin which is extended or changed.

Never use geometry settings or bounding box options inside a subskin definition! If one skin is replaced by another skin, the overall bounding box should stay constant. Especially, if a skin is used for a breakable box, unpredictable and unpleasant results could arise otherwise. If you want to change the geometry also, use an additional style. See the skin `beamer`→P.160 and the style `/tcb/beamer`→P.160 as pattern.

\tcbsubskin{⟨*name*⟩}{⟨*base skin*⟩}{⟨*options*⟩}

Creates a new skin ⟨*name*⟩ which inherits all properties of an existing ⟨*base skin*⟩ plus the given ⟨*options*⟩. The new skin ⟨*name*⟩ can be used as value for the keys `/tcb/skin`→P.81, `/tcb/skin first`→P.81, `/tcb/skin middle`→P.81, and `/tcb/skin last`→P.81. As ⟨*base skin*⟩, one can take `standard`→P.140, `empty`→P.169, `enhanced`→P.142, or any skin from the `LIB skins` library, see Section 7 on page 93.

```
% \tcbuselibrary{skins}
\tcbsubskin{mycross}{empty}{frame code={%
  \draw[red,line width=5pt] (frame.south west)--(frame.north east);
  \draw[red,line width=5pt] (frame.north west)--(frame.south east);},
  skin first=mycross,skin middle=mycross,skin last=mycross }

\begin{tcolorbox}[skin=mycross]
  This is my content.
\end{tcolorbox}
```

This is my content.

/tcb/skin first is subskin of={⟨*base skin*⟩}{⟨*options*⟩}   (no default, initially unset)

Creates a new unnamed skin which inherits all properties of an existing ⟨*base skin*⟩ plus the given ⟨*options*⟩. This skin is set as `/tcb/skin first`→P.81.
See a detailed example on page 174.

/tcb/skin middle is subskin of={⟨*base skin*⟩}{⟨*options*⟩}   (no default, initially unset)

Creates a new unnamed skin which inherits all properties of an existing ⟨*base skin*⟩ plus the given ⟨*options*⟩. This skin is set as `/tcb/skin middle`→P.81.
See a detailed example on page 174.

/tcb/skin last is subskin of={⟨*base skin*⟩}{⟨*options*⟩}   (no default, initially unset)

Creates a new unnamed skin which inherits all properties of an existing ⟨*base skin*⟩ plus the given ⟨*options*⟩. This skin is set as `/tcb/skin last`→P.81.
See a detailed example on page 174.

6.4 Drawing Scheme

Depending on the complexity of a `tcolorbox` definition, the resulting box is drawn in a more or less complex series of steps.

To document and demonstrate these drawing steps, we consider the following box definition:

```
\newtcolorbox{testbox}[1][]{enhanced,title=Test Box,
  boxrule=1mm,titlerule=0.5mm,colframe=blue!50!black,
  interior style={top color=blue!20!green!50!white,bottom color=blue!20!yellow!50!white},
  colbacktitle=blue!50!green!90!white,segmentation style={solid},
  fonttitle=\bfseries,drop fuzzy shadow,borderline={0.3mm}{0.35mm}{yellow!50!white},
  underlay={\path[fill image opacity=0.15,fill image scale=0.9,
    fill stretch picture={\draw[blue,line width=2mm] circle (1);}]
    (interior.south west) rectangle (interior.north east);},
  watermark text={Watermark},watermark color={green!20!white},
  finish={\begin{tcbclipframe}
    \path[bottom color=black,top color=black!50!white,opacity=0.1]
      (frame.south west) -- (frame.south east) -- (frame.north east) -- cycle;
    \path[top color=white,bottom color=black!50!white,opacity=0.1]
      (frame.south west) -- (frame.north east) -- (frame.north west) -- cycle;
    \end{tcbclipframe}},#1}
```

For this definition, we get the maximal number of drawing steps:
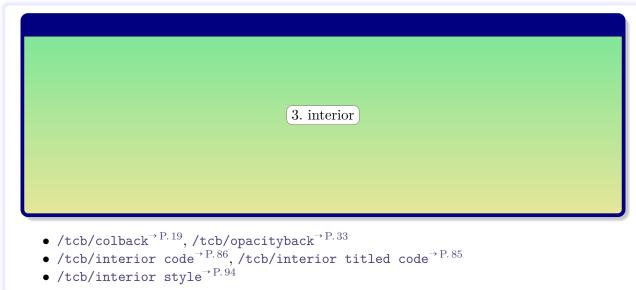

1. shadow

- Section 7.6 on page 121

2. frame

- /tcb/colframe[→P. 19], /tcb/opacityframe[→P. 33]
- /tcb/frame code[→P. 85]
- /tcb/frame style[→P. 93]

- /tcb/colback$^{\to P.\,19}$, /tcb/opacityback$^{\to P.\,33}$
- /tcb/interior code$^{\to P.\,86}$, /tcb/interior titled code$^{\to P.\,85}$
- /tcb/interior style$^{\to P.\,94}$
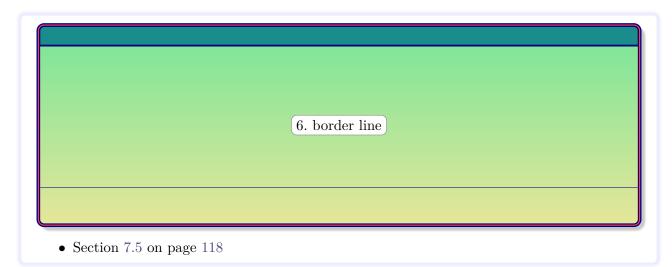

- /tcb/colbacktitle$^{\to P.\,19}$, /tcb/opacitybacktitle$^{\to P.\,33}$
- /tcb/title code$^{\to P.\,87}$
- /tcb/title style$^{\to P.\,96}$

- /tcb/lower separated$^{\to P.\,17}$
- /tcb/segmentation code$^{\to P.\,86}$
- /tcb/segmentation style$^{\to P.\,96}$

6. border line

- Section 7.5 on page 118

7. underlay

- Section 7.2 on page 99
- Section 7.8 on page 133

Watermark

8. overlay

- Section 3.8 on page 50
- Section 7.3 on page 106

Lower part

7 Library ⧉LIB skins

The library is loaded by a package option or inside the preamble by:

```
\tcbuselibrary{skins}
```

This also loads the package tikz [19]. Typically but not necessarily, the following skins use tikz instead of pgf.

7.1 Style Option Keys

The following style options are applicable for all skins which use engines of type `path`, `pathfirst`, `pathmiddle`, or `pathlast`. Especially, the skin enhanced^{→P.142} supports *all* of them and standard^{→P.140} *none*.

/tcb/frame style=⟨tikz *keys*⟩ (style, no default)
The ⟨tikz *keys*⟩ are used inside the tikz path command for drawing the *frame* of the box. This option is available if the /tcb/frame engine^{→P.82} is set to `path`, `pathfirst`, `pathmiddle`, or `pathlast`. It is *not* available for `standard`.

```
\tcbset{colback=red!5!white,fonttitle=\bfseries}

\begin{tcolorbox}[enhanced,title=My title,
  frame style={left color=red!75!black,
               right color=blue!75!black}]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> **My title**
>
> This is a **tcolorbox**.
>
> - - - - - - - - - - - - - -
>
> This is the lower part.

/tcb/frame style image=⟨*file name*⟩ (no default, initially unset)
Fills the frame with an external image referenced by ⟨*file name*⟩. For advanced features like blending of a picture with the background, use /tcb/frame style together with /tikz/fill stretch image^{→P.183}.

```
\tcbset{colback=red!5!white,fonttitle=\bfseries}

\begin{tcolorbox}[enhanced,title=My title,
  frame style image=blueshade.png]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> **My title**
>
> This is a **tcolorbox**.
>
> - - - - - - - - - - - - - -
>
> This is the lower part.

/tcb/frame style tile={⟨*graphics options*⟩}{⟨*file name*⟩}   (no default, initially unset)
Fills the frame with a tile pattern based on an external image referenced by ⟨*file name*⟩.
The ⟨*graphics options*⟩ are given to the underlying `\includegraphics` command. For advanced features like blending of a picture with the background, use `/tcb/frame style`[→ P. 93]
together with `/tikz/fill tile image`[→ P. 187].

```
\tcbset{colback=red!5!white,coltitle=red!30!black,
  opacityback=0.75,fonttitle=\bfseries}

\begin{tcolorbox}[enhanced,title=My title,
  frame style tile={width=1cm}{pink_marble.png}]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> **My title**
>
> This is a **tcolorbox**.
> - - - - - - - - - - - - - - - - - -
> This is the lower part.

/tcb/frame hidden   (style, no value)
This is a shortcut for `frame style={draw=none,fill=none}`. Depending on the skin, this
option switches off the drawing of the frame. Alternatively, use `/tcb/frame empty`[→ P. 85].

```
\tcbset{colback=red!5!white,colframe=red!75!black,
  fonttitle=\bfseries,coltitle=black}

\begin{tcolorbox}[enhanced,title=My title,
  frame hidden]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```
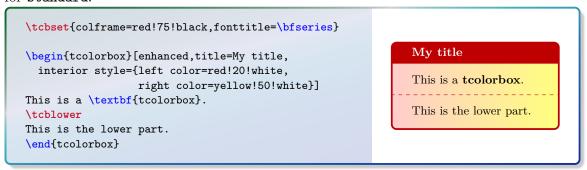

> **My title**
>
> This is a **tcolorbox**.
> - - - - - - - - - - - - - - - - - -
> This is the lower part.

/tcb/interior style=⟨tikz *keys*⟩   (style, no default)
The ⟨tikz *keys*⟩ are used inside the `tikz` path command for drawing the *interior* of the
box. They are used for the titled and for the untitled version as well.
This option is available if the `/tcb/interior titled engine`[→ P. 82] or `/tcb/interior
engine`[→ P. 83] is set to `path`, `pathfirst`, `pathmiddle`, or `pathlast`. It is *not* available
for `standard`.

```
\tcbset{colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[enhanced,title=My title,
  interior style={left color=red!20!white,
                  right color=yellow!50!white}]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> **My title**
>
> This is a **tcolorbox**.
> - - - - - - - - - - - - - - - - - -
> This is the lower part.

/tcb/interior style image=⟨*file name*⟩ (no default, initially unset)
Fills the interior with an external image referenced by ⟨*file name*⟩. For advanced features like blending of a picture with the background, use /tcb/interior style^{→P.94} together with /tikz/fill stretch image^{→P.183}.

```
\tcbset{colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[enhanced,title=My title,
  interior style image=goldshade.png]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> **My title**
>
> This is a **tcolorbox**.
> - - - - - - - - - - - - - - - - -
> This is the lower part.

/tcb/interior style tile={⟨*graphics options*⟩}{⟨*file name*⟩} (no default, initially unset)
Fills the interior with a tile pattern based on an external image referenced by ⟨*file name*⟩. The ⟨*graphics options*⟩ are given to the underlying **\includegraphics** command. For advanced features like blending of a picture with the background, use /tcb/interior style^{→P.94} together with /tikz/fill tile image^{→P.187}.

```
\tcbset{colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[enhanced,title=My title,
  interior style tile={width=2cm}{crinklepaper.png}]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> **My title**
>
> This is a **tcolorbox**.
> - - - - - - - - - - - - - - - - -
> This is the lower part.

/tcb/interior hidden (style, no value)
This is a shortcut for `interior style={draw=none,fill=none}`. Depending on the skin, this option switches off the drawing of the interior. Alternatively, use /tcb/interior empty^{→P.86} and/or /tcb/interior titled empty^{→P.85}.

```
\tcbset{frame style={top color=red!20!white,
  bottom color=red!20!white!75!black},
  fonttitle=\bfseries,coltitle=black}

\begin{tcolorbox}[enhanced,title=My title,
  interior hidden]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> **My title**
>
> This is a **tcolorbox**.
> - - - - - - - - - - - - - - - - -
> This is the lower part.

/tcb/segmentation style=⟨*tikz keys*⟩   (style, no default)

The ⟨*tikz keys*⟩ are used inside the `tikz` path command for drawing the *segmentation* line of the box.

This option is available if the `/tcb/segmentation engine`[→P. 83] is set to `path`. It is *not* available for `standard`.

```
\tcbset{colback=red!5!white,colframe=red!75!black,
  fonttitle=\bfseries}

\begin{tcolorbox}[enhanced,title=My title,
  segmentation style={double=white,draw=blue,
               double distance=1pt,solid}]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```

> **My title**
>
> This is a **tcolorbox**.
> ─────────────
> This is the lower part.

/tcb/segmentation hidden   (style, no value)

This is a shortcut for `segmentation style={draw=none,fill=none}`. Depending on the skin, this option switches off the drawing of the segmentation line. See also `/tcb/lower separated`[→P. 17] which has the same effect for most skins. Alternatively, use `/tcb/segmentation empty`[→P. 86].

```
\tcbset{colback=red!5!white,colframe=red!75!black,
  fonttitle=\bfseries}

\begin{tcolorbox}[title=My title,
  enhanced,segmentation hidden]
This is a \textbf{tcolorbox}.
\tcblower
This is the lower part.
\end{tcolorbox}
```
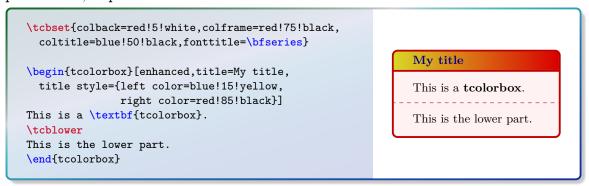

> **My title**
>
> This is a **tcolorbox**.
>
> This is the lower part.

/tcb/title style=⟨*tikz keys*⟩   (style, no default)

The ⟨*tikz keys*⟩ are used inside the `tikz` path command for drawing the *title area* of the box.

This option is available if the `/tcb/title engine`[→P. 83] is set to `path`, `pathfirst`, `pathmiddle`, or `pathlast`. It is *not* available for `standard`.

```
\tcbset{colback=red!5!white,colframe=red!75!black,
  coltitle=blue!50!black,fonttitle=\bfseries}

\begin{tcolorbox}[enhanced,title=My title,
  title style={left color=blue!15!yellow,
             right color=red!85!black}]
This is a \textbf{tcolorbox}.

7.2 Boxed Title Option Keys

The following options place the title text into an own `\tcbox`→P.11. This boxed title can be customized independently from the main box using `/tcb/boxed title style`→P.101. The placement can be influenced by ⟨*boxtitle options*⟩.

/tcb/attach boxed title to top left=⟨*boxtitle options*⟩   (style, default empty)

The title is boxed with a `\tcbox`→P.11 and attached to the top left corner of the main box.

```
\begin{tcolorbox}[enhanced,title=My title,
  attach boxed title to top left]
  This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

/tcb/attach boxed title to top center=⟨*boxtitle options*⟩   (style, default empty)

The title is boxed with a `\tcbox`→P.11 and attached to the top of the main box.

```
\begin{tcolorbox}[enhanced,title=My title,
  attach boxed title to top center]
  This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

/tcb/attach boxed title to top right=⟨*boxtitle options*⟩   (style, default empty)

The title is boxed with a `\tcbox`→P.11 and attached to the top right corner of the main box.

```
\begin{tcolorbox}[enhanced,title=My title,
  attach boxed title to top right]
  This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

/tcb/attach boxed title to bottom left=⟨*boxtitle options*⟩   (style, default empty)

The title is boxed with a `\tcbox`→P.11 and attached to the bottom left corner of the main box.

```
\begin{tcolorbox}[enhanced,title=My title,
  attach boxed title to bottom left]
  This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

/tcb/attach boxed title to bottom center=⟨*boxtitle options*⟩   (style, default empty)

The title is boxed with a `\tcbox`→P.11 and attached to the bottom of the main box.

```
\begin{tcolorbox}[enhanced,title=My title,
  attach boxed title to bottom center]
  This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

/tcb/attach boxed title to bottom right=⟨*boxtitle options*⟩   (style, default empty)

The title is boxed with a `\tcbox`→P.11 and attached to the bottom right corner of the main box.

```
\begin{tcolorbox}[enhanced,title=My title,
  attach boxed title to bottom right]
  This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

The ⟨*boxtitle options*⟩ of the keys described above are shift values. The dimensions of the boxed title are stored into two macros `\tcboxedtitleheight` and `\tcboxedtitlewidth`. These macros can be used inside the following ⟨*boxtitle options*⟩:

/tcb/boxtitle/xshift=⟨*length*⟩   (no default, initially `0pt`)

The boxed title is shifted by ⟨*length*⟩ in the horizontal direction.

```
\begin{tcolorbox}[enhanced,title=My title,
  attach boxed title to top left={xshift=-2mm},
  boxed title style={size=small,colback=blue}]
  This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> My title
>
> This is a **tcolorbox**.

/tcb/boxtitle/yshift=⟨*length*⟩   (no default, initially `0pt`)

The boxed title is shifted by ⟨*length*⟩ in the vertical direction.

```
\begin{tcolorbox}[enhanced,title=My title,
  attach boxed title to top center=
    {yshift=-\tcboxedtitleheight/2},
  boxed title style={size=small,colback=blue}]
  This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> My title
>
> This is a **tcolorbox**.

/tcb/boxtitle/yshifttext=⟨*length*⟩   (no default, initially `0pt`)

The text inside the main box by ⟨*length*⟩ to give room for e. g. a sunken title.

```
\begin{tcolorbox}[enhanced,title=My title,
  attach boxed title to top center=
    {yshift=-3mm,yshifttext=-1mm},
  boxed title style={size=small,colback=blue}]
  This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> My title
>
> This is a **tcolorbox**.

/tcb/boxtitle/yshift*=⟨*length*⟩   (no default, initially `0pt`)

Sets /tcb/boxtitle/yshift and /tcb/boxtitle/yshifttext the same time.
/tcb/boxtitle/yshifttext is only set if necessary.

```
\begin{tcolorbox}[enhanced,title=My title,
  attach boxed title to top center={yshift*=-3mm},
  boxed title style={size=small,colback=blue}]
  This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> My title
>
> This is a **tcolorbox**.

The bounding box of the resulting total `tcolorbox` is adapted automatically to the *vertical* dimensions of the boxed title. Possible horizontal enlargements are *not* automatically computed.

```
\begin{tcolorbox}[enhanced,title=My title,
  attach boxed title to top left=
    {xshift=-2mm,yshift=-2mm},
  boxed title style={size=small,colback=blue},
  show bounding box]
  This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> My title
>
> This is a **tcolorbox**.

The boxed title options are implemented as an underlay, see Section 7.8 on page 133. Therefore, a boxed title is not drawn, if a skin does not support underlays like `standard`[→P. 140]. Still, the room for the boxed titles gets reserved in these cases.
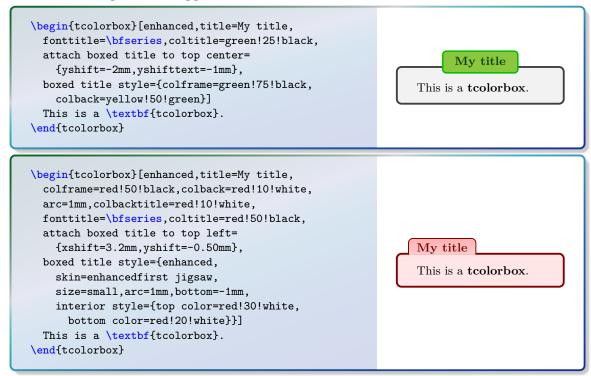

A Ti*k*Z node `title` is produced by a boxed title which can be used inside `/tcb/frame code`[→P. 85], `/tcb/interior code`[→P. 86], underlays, overlays, and finishes.

A boxed title is almost always the first underlay. The only exceptions are underlays defined by `/tcb/underlay boxed title`[→P. 134] which are drawn before. Additionally, underlays defined by `/tcb/underlay boxed title`[→P. 134] are only drawn, if a boxed title is actually set. They are ignored, if there is no boxed title.

`/tcb/boxed title style`=⟨*options*⟩   (style, initially empty)
    By default, a boxed title is dimensioned with `/tcb/size`[→P. 29]=`title` and inherits `/tcb/colframe`[→P. 19] of the main box. Also, the `/tcb/colback`[→P. 19] is inherited from the main `/tcb/colbacktitle`[→P. 19]. Font and color of the title text are set as usual. All other ⟨*options*⟩ are set by the `boxed title style` key. Since a boxed title is set by `\tcbox`[→P. 11], all `tcolorbox` options are applicable here.

```
\begin{tcolorbox}[enhanced,title=My title,
  fonttitle=\bfseries,coltitle=green!25!black,
  attach boxed title to top center=
    {yshift=-2mm,yshifttext=-1mm},
  boxed title style={colframe=green!75!black,
    colback=yellow!50!green}]
  This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

> This is a **tcolorbox**.
>
> This title is not really very short
> This is a **tcolorbox**.

/tcb/minipage boxed title=⟨*length*⟩ (initially unset)
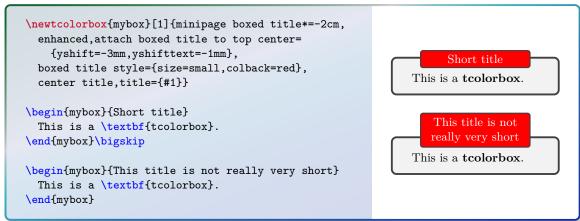

The title text content is captured with a minipage with a width of ⟨*length*⟩. By default, the resulting boxed title is somewhat smaller than the main box.

```latex
\newtcolorbox{mybox}[1]{minipage boxed title,
  enhanced,attach boxed title to top center=
    {yshift=-3mm,yshifttext=-1mm},
  boxed title style={size=small,colback=red},
  center title,title={#1}}

\begin{mybox}{Short title}
  This is a \textbf{tcolorbox}.
\end{mybox}\bigskip

\begin{mybox}{This title is not really very short}
  This is a \textbf{tcolorbox}.
\end{mybox}
```

> Short title
> This is a **tcolorbox**.
>
> This title is not really very short
> This is a **tcolorbox**.

/tcb/minipage boxed title*=⟨*length*⟩ (initially unset)

The title text content is captured with a minipage with a width of main box width plus ⟨*length*⟩. By default, the resulting boxed title is somewhat smaller than the main box.

```latex
\newtcolorbox{mybox}[1]{minipage boxed title*=-2cm,
  enhanced,attach boxed title to top center=
    {yshift=-3mm,yshifttext=-1mm},
  boxed title style={size=small,colback=red},
  center title,title={#1}}

\begin{mybox}{Short title}
  This is a \textbf{tcolorbox}.
\end{mybox}\bigskip

\begin{mybox}{This title is not really very short}
  This is a \textbf{tcolorbox}.
\end{mybox}
```

> Short title
> This is a **tcolorbox**.
>
> This title is not really very short
> This is a **tcolorbox**.

/tcb/tikznode boxed title=⟨*options*⟩ (initially unset)

The title text content is captured with a TikZ node with given TikZ ⟨*options*⟩. The text is centered by default

```
\newtcolorbox{mybox}[1]{tikznode boxed title,
  enhanced,attach boxed title to top center=
    {yshift=-3mm,yshifttext=-1mm},
  boxed title style={size=small,colback=red},
  title={#1}}

\begin{mybox}{Short title}
  This is a \textbf{tcolorbox}.
\end{mybox}\bigskip

\begin{mybox}{This title\\is not really\\very short}
  This is a \textbf{tcolorbox}.
\end{mybox}
```

> **Short title**
> This is a **tcolorbox**.
>
> **This title is not really very short**
> This is a **tcolorbox**.

/tcb/varwidth boxed title=⟨*length*⟩ (initially unset)
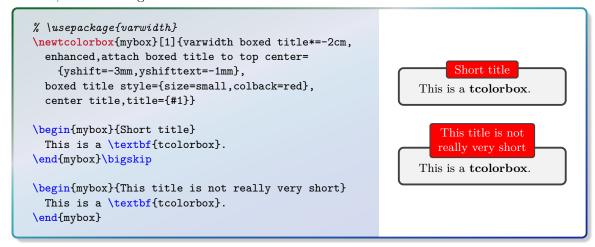

The title text content is captured with a `varwidth` environment with a width of ⟨*length*⟩. This style needs the `varwidth` package [1] to be loaded manually. By default, the resulting boxed title is somewhat smaller than the main box.

```
% \usepackage{varwidth}
\newtcolorbox{mybox}[1]{varwidth boxed title,
  enhanced,attach boxed title to top center=
    {yshift=-3mm,yshifttext=-1mm},
  boxed title style={size=small,colback=red},
  center title,title={#1}}

\begin{mybox}{Short title}
  This is a \textbf{tcolorbox}.
\end{mybox}\bigskip

\begin{mybox}{This title is not really very short}
  This is a \textbf{tcolorbox}.
\end{mybox}
```

> **Short title**
> This is a **tcolorbox**.
>
> **This title is not really very short**
> This is a **tcolorbox**.

/tcb/varwidth boxed title*=⟨*length*⟩ (initially unset)

The title text content is captured with a `varwidth` environment with a width of main box width plus ⟨*length*⟩. This style needs the `varwidth` package [1] to be loaded manually. By default, the resulting boxed title is somewhat smaller than the main box.

```
% \usepackage{varwidth}
\newtcolorbox{mybox}[1]{varwidth boxed title*=-2cm,
  enhanced,attach boxed title to top center=
    {yshift=-3mm,yshifttext=-1mm},
  boxed title style={size=small,colback=red},
  center title,title={#1}}

\begin{mybox}{Short title}
  This is a \textbf{tcolorbox}.
\end{mybox}\bigskip

\begin{mybox}{This title is not really very short}
  This is a \textbf{tcolorbox}.
\end{mybox}
```

> **Short title**
> This is a **tcolorbox**.
>
> **This title is not really very short**
> This is a **tcolorbox**.

7.3 Watermark Option Keys

The following watermark options are applicable for all skins which use `tikzpicture` as
`/tcb/graphical environment`[→P.81]. Therefore, the skin `standard`[→P.140] does not support
these watermarks, but all other skins, e. g. `enhanced`[→P.142].

> The watermark options rely on the more general overlay options described in Section 3.8 from
> page 50. Therefore, *watermarks* and *overlays* cannot be used mixed. But a mixture is possible
> with the ⬛ hooks library, see Section 13.

/tcb/watermark text=⟨*text*⟩   (no default, initially unset)
  Writes some ⟨*text*⟩ in the center of the interior region of a `tcolorbox`. This ⟨*text*⟩ is written
  after the frame and interior are drawn and *before* the text content is drawn. It is zoomed
  or stretched according the values of `/tcb/watermark zoom`[→P.109] or `/tcb/watermark
  stretch`[→P.111].

```
\tcbset{colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[enhanced,title=My title,watermark text=My Watermark]
\lipsum[1]
\tcblower
\lipsum[2]
\end{tcolorbox}
```

My title

Pellentesque cursus luctus mauris.

/tcb/watermark text on=⟨*part*⟩ `is` ⟨*text*⟩   (no default, initially unset)
  This option writes some ⟨*text*⟩ in the center of the interior region of a `tcolorbox` as described
  for `/tcb/watermark text`. But this is done only for boxes named ⟨*part*⟩ of a break sequence,
  see `/tcb/breakable`[→P.246].
  Feasible values for ⟨*part*⟩ are:
  - **broken**: all broken box parts,
  - **unbroken**: unbroken boxes only,
  - **first**: first parts of a break sequence,
  - **middle**: middle parts of a break sequence,
  - **last**: last parts of a break sequence,
  - **unbroken and first**: unbroken boxes and first parts of a break sequence,
  - **middle and last**: middle and last parts of a break sequence.

`/tcb/watermark graphics`=⟨*file name*⟩ (no default, initially unset)

Draws an external picture referenced by ⟨*file name*⟩ in the center of the interior region of a `tcolorbox`. The picture is drawn *after* the frame and interior are drawn and *before* the text content is drawn. It is zoomed or stretched according the values of `/tcb/watermark zoom`[→P.109] or `/tcb/watermark stretch`[→P.111].

```
\tcbset{colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries}

>
> -
>
> This example uses a public domain picture from
> http://commons.wikimedia.org/wiki/File:Basilica_5.png

`/tcb/watermark graphics on`=⟨*part*⟩ `is` ⟨*file name*⟩ (no default, initially unset)

This option draws a picture referenced by ⟨*file name*⟩ in the center of the interior region of a `tcolorbox` as described for `/tcb/watermark graphics`. But this is done only for boxes named ⟨*part*⟩ of a break sequence, see `/tcb/breakable`[→P.246].

Feasible values for ⟨*part*⟩ are:

- **broken**: all broken box parts,
- **unbroken**: unbroken boxes only,
- **first**: first parts of a break sequence,
- **middle**: middle parts of a break sequence,
- **last**: last parts of a break sequence,
- **unbroken and first**: unbroken boxes and first parts of a break sequence,
- **middle and last**: middle and last parts of a break sequence.

`/tcb/watermark tikz`=⟨*graphical code*⟩   (no default, initially unset)

Draws the given `tikz` ⟨*graphical code*⟩ in the center of the interior region of a `tcolorbox`. The code is executed *after* the frame and interior are drawn and *before* the text content is drawn. The result is zoomed or stretched according the values of `/tcb/watermark zoom`^{→P.109} or `/tcb/watermark stretch`^{→P.111}.

```
\tcbset{colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[enhanced,title=My title,

Pellentesque cursus luctus mauris.

`/tcb/watermark tikz on`=⟨*part*⟩ `is` ⟨*graphical code*⟩   (no default, initially unset)

This option draws the given `tikz` ⟨*graphical code*⟩ in the center of the interior region of a `tcolorbox` as described for `/tcb/watermark tikz`. But this is done only for boxes named ⟨*part*⟩ of a break sequence, see `/tcb/breakable`^{→P.246}.

Feasible values for ⟨*part*⟩ are:
- **`broken`**: all broken box parts,
- **`unbroken`**: unbroken boxes only,
- **`first`**: first parts of a break sequence,
- **`middle`**: middle parts of a break sequence,
- **`last`**: last parts of a break sequence,
- **`unbroken and first`**: unbroken boxes and first parts of a break sequence,
- **`middle and last`**: middle and last parts of a break sequence.

`/tcb/no watermark`   (style, no default, initially set)

Removes the watermark if set before. This is an alias for `/tcb/no overlay`^{→P.51}.

`/tcb/watermark opacity`=⟨*fraction*⟩ (no default, initially `1.00`)

Sets the opacity value ∈ [0, 1] for a watermark.

```
\tcbset{enhanced,colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries,
  watermark text=Watermark,nobeforeafter,width=(\linewidth-2mm)/2}

\begin{tcolorbox}[title=Opacity 1.00,watermark opacity=1.00]
\lipsum[2]
\end{tcolorbox}\hfill%
\begin{tcolorbox}[title=Opacity 0.50,watermark opacity=0.50]
\lipsum[2]
\end{tcolorbox}%
```

Opacity 1.00	**Opacity 0.50**
Nam dui ligula, fringilla a, euismod sodales, sollicitudin vel, wisi. Morbi auctor lorem non justo. Nam lacus libero, pretium at, lobortis vitae, ultricies et, tellus. Donec aliquet, tortor sed accumsan bibendum, erat ligula aliquet magna, vitae ornare odio metus a mi. Morbi ac orci et nisl hendrerit mollis. Suspendisse ut massa. Cras nec ante. Nam lacus libero, pretium at, lobortis vitae, ultricies et, tellus. Donec aliquet, tortor sed accumsan bibendum, erat ligula aliquet magna, vitae ornare odio metus a mi. Morbi ac orci et nisl hendrerit mollis. Suspendisse ut massa. Cras nec ante. Pellentesque a nulla. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Aliquam tincidunt urna. Nulla ullamcorper vestibulum turpis. Pellentesque cursus luctus mauris.

`/tcb/watermark zoom`=⟨*fraction*⟩ (no default, initially `0.75`)

Sets the zoom value for a watermark. The zoom respects the aspect ratio. The value 1.0 means to fill the whole box until the watermark touches the frame.

```
\tcbset{enhanced,colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries,
  watermark text=Watermark,nobeforeafter,width=(\linewidth-2mm)/2}

\begin{tcolorbox}[title=Zoom 1.0,watermark zoom=1.0]
\lipsum[2]
\end{tcolorbox}\hfill%
\begin{tcolorbox}[title=Zoom 0.5,watermark zoom=0.5]
\lipsum[2]
\end{tcolorbox}%
```

Zoom 1.0	**Zoom 0.5**
Nam dui ligula, fringilla a, euismod sodales, sollicitudin vel, wisi. Morbi auctor lorem non justo. Nam lacus libero, pretium at, lobortis vitae, ultricies et, tellus. Donec aliquet, tortor sed accumsan bibendum, erat ligula aliquet magna, vitae ornare odio metus a mi. Morbi ac orci et nisl hendrerit mollis. Suspendisse ut massa. Cras nec ante. Pellentesque a nulla. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Aliquam tincidunt urna. Nulla ullamcorper vestibulum turpis. Pellentesque cursus luctus mauris.	Nam dui ligula, fringilla a, euismod sodales, sollicitudin vel, wisi. Morbi auctor lorem non justo. Nam lacus libero, pretium at, lobortis vitae, ultricies et, tellus. Donec aliquet, tortor sed accumsan bibendum, erat ligula aliquet magna, vitae ornare odio metus a mi. Morbi ac orci et nisl hendrerit mollis. Suspendisse ut massa. Cras nec ante. Pellentesque a nulla. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Aliquam tincidunt urna. Nulla ullamcorper vestibulum turpis. Pellentesque cursus luctus mauris.

`/tcb/watermark shrink`=⟨*fraction*⟩   (no default, initially unset)

Identically to **`/tcb/watermark zoom`**[→ P. 109], but the watermark never gets enlarged. Thus, the watermark keeps its original size or is shrunk.

`/tcb/watermark overzoom`=⟨*fraction*⟩   (no default, initially unset)

Sets the overzoom value for a watermark. The overzoom respects the aspect ratio. The value 1.0 means to fill the whole box until the watermark touches all four sides of the frame.

```
\tcbset{enhanced,colback=white,colframe=blue!50!black,fonttitle=\bfseries,
  watermark opacity=0.5,
  watermark graphics=lichtspiel.jpg,nobeforeafter,width=(\linewidth-2mm)/2}

\begin{tcolorbox}[title=Zoom 1.0,watermark zoom=1.0]
\lipsum[1]
\end{tcolorbox}\hfill%
\begin{tcolorbox}[title=Overzoom 1.0,watermark overzoom=1.0]
\lipsum[1]
\end{tcolorbox}%
```

Zoom 1.0

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. Nam arcu libero, nonummy eget, consectetuer id, vulputate a, magna. Donec vehicula augue eu neque. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Mauris ut leo. Cras viverra metus rhoncus sem. Nulla et lectus vestibulum urna fringilla ultrices. Phasellus eu tellus sit amet tortor gravida placerat. Integer sapien est, iaculis in, pretium quis, viverra ac, nunc. Praesent eget sem vel leo ultrices bibendum. Aenean faucibus. Morbi dolor nulla, malesuada eu, pulvinar at, mollis ac, nulla. Curabitur auctor semper nulla. Donec varius orci eget risus. Duis nibh mi, congue eu, accumsan eleifend, sagittis quis, diam. Duis eget orci sit amet orci dignissim rutrum.

Overzoom 1.0

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. Nam arcu libero, nonummy eget, consectetuer id, vulputate a, magna. Donec vehicula augue eu neque. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Mauris ut leo. Cras viverra metus rhoncus sem. Nulla et lectus vestibulum urna fringilla ultrices. Phasellus eu tellus sit amet tortor gravida placerat. Integer sapien est, iaculis in, pretium quis, viverra ac, nunc. Praesent eget sem vel leo ultrices bibendum. Aenean faucibus. Morbi dolor nulla, malesuada eu, pulvinar at, mollis ac, nulla. Curabitur auctor semper nulla. Donec varius orci eget risus. Duis nibh mi, congue eu, accumsan eleifend, sagittis quis, diam. Duis eget orci sit amet orci dignissim rutrum.

If a `/tcb/watermark overzoom` value of `1.0` is used in connection with invisible top and bottom rules which still have a thickness greater than `0pt`, the space of these invisible rules may not be covered by the watermark. For example, this situation may occur during the breaking of `/tcb/enhanced`[→ P. 142] boxes. To avoid this optical glitch, just set `/tcb/pad at break`[→ P. 249] to any desired value.

`/tcb/watermark stretch`=⟨*fraction*⟩ (no default, initially unset)

Sets the stretch value for a watermark. The stretch value is applied to width and height in relation to the box dimensions. It does not respect the aspect ratio. The value 1.0 means to fill the whole box.

```
\tcbset{enhanced,colback=white,colframe=blue!50!black,fonttitle=\bfseries,
  watermark graphics=lichtspiel.jpg,watermark opacity=0.5,
  nobeforeafter,width=(\linewidth-2mm)/2}

\begin{tcolorbox}[title=Stretch 1.00,watermark stretch=1.00]
\lipsum[2]
\end{tcolorbox}\hfill%
\begin{tcolorbox}[title=Stretch 0.50,watermark stretch=0.50]
\lipsum[2]
\end{tcolorbox}%
```

<div style="display:flex">

7.4 Clip Environments

The following clip environments are applicable for all skins which use engines of type `path`, `pathfirst`, `pathmiddle`, or `pathlast`. Especially, the skin enhanced[→P.142] supports *all* of them and standard[→P.140] *none*. The typical area of application is inside overlay code, see Section 3.8 from page 50.

```
\begin{tcbclipframe}
  ⟨environment content⟩
\end{tcbclipframe}
```

Defines a `Tikz` scope which clips to the frame area path.

```
\makeatletter
\newtcolorbox{picturebox}[2][]{%
  enhanced,frame hidden,interior hidden,fonttitle=\bfseries,
  overlay={\begin{tcbclipframe}\node at (frame)
    {\includegraphics[width=\tcb@width,height=\tcb@height]{#2}};\end{tcbclipframe}%
    \begin{tcbclipinterior}\fill[white,opacity=0.75]
    (frame.south west) rectangle (frame.north east);\end{tcbclipinterior}},#1}

```

This is a title which is unbreakable and far too long

This is a tcolorbox.

This is a title which is unbreak

This is a tcolorbox.

/tcb/clip upper=true|false   (default `true`, initially `false`)

Sets the upper part to be clipped to the interior area.

```
\newcommand{\mygraphics}[2][]{%
  \tcbox[enhanced,boxsep=0pt,top=0pt,bottom=0pt,left=0pt,
    right=0pt,boxrule=0.4pt,drop fuzzy shadow,clip upper,
    colback=black!75!white,toptitle=2pt,bottomtitle=2pt,nobeforeafter,
    center title,fonttitle=\small\sffamily,title=\detokenize{#2}]
  {\includegraphics[width=\the\dimexpr(\linewidth-4mm)/2\relax]{#2}}}

\mygraphics{lichtspiel.jpg}\hfill
\mygraphics{Basilica_5.png}
```
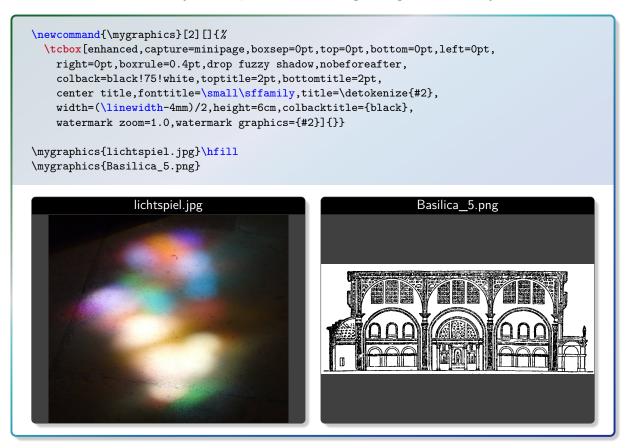

lichtspiel.jpg

Basilica_5.png

The example for `/tcb/clip upper`→ P. 116 sizes the box according to the dimensions of the picture. To do it the other way around, the watermark options provide an easy solution.

```
\newcommand{\mygraphics}[2][]{%
  \tcbox[enhanced,capture=minipage,boxsep=0pt,top=0pt,bottom=0pt,left=0pt,
    right=0pt,boxrule=0.4pt,drop fuzzy shadow,nobeforeafter,
    colback=black!75!white,toptitle=2pt,bottomtitle=2pt,
    center title,fonttitle=\small\sffamily,title=\detokenize{#2},
    width=(\linewidth-4mm)/2,height=6cm,colbacktitle={black},
    watermark zoom=1.0,watermark graphics={#2}]{}}

\mygraphics{lichtspiel.jpg}\hfill
\mygraphics{Basilica_5.png}
```

/tcb/clip lower=true|false   (default true, initially false)

Sets the lower part to be clipped to the interior area.

```
\tcbset{enhanced,width=5cm,colframe=red!50!black,text and listing}

\begin{tcblisting}{}
Donau\-dampf\-schiff\-fahrts\-ka\-pi\-t\"ans\-m\"ut\-zen\-fran\-sen
\end{tcblisting}

\begin{tcblisting}{clip lower}
Donau\-dampf\-schiff\-fahrts\-ka\-pi\-t\"ans\-m\"ut\-zen\-fran\-sen
\end{tcblisting}
```

7.5 Border Line Option Keys

The following border line options are applicable for most skins which use `tikzpicture` as `/tcb/graphical environment`[→P. 81]. Therefore, the skin `standard`[→P. 140] does not support these border lines, but most other skins, e.g. `enhanced`[→P. 142].

The border lines are independent from the normal `tcolorbox` rules. They may be used with or without the `/tcb/segmentation engine`[→P. 83].

The border lines are stackable, i.e. several different border lines can be used on the same `tcolorbox`. They are drawn *after* the box frame and box interior and *before* overlays or watermarks.
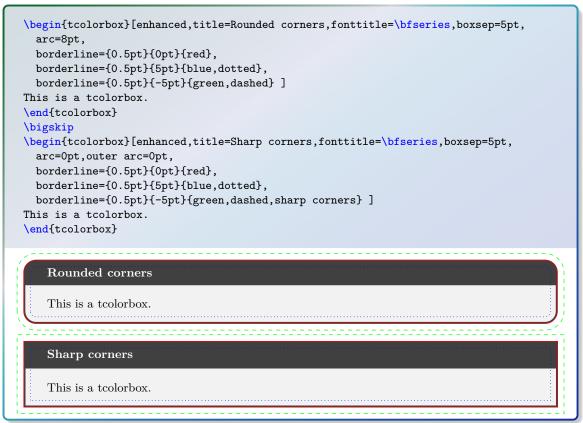

> Technically, the normal `tcolorbox` rules result from a TikZ *filling* process. The border lines are created by a TikZ *drawing* process. This can be used to apply different effects.

/tcb/borderline={⟨*width*⟩}{⟨*offset*⟩}{⟨*options*⟩}   (no default, initially unset)
Adds a new border line to the stack of border lines. This border line is drawn with the given ⟨*width*⟩ and gets a ⟨*offset*⟩ computed from the frame outline. A positive ⟨*offset*⟩ value moves the borderline inside the `tcolorbox` and a negative ⟨*offset*⟩ value moves it outside without changing the bounding box.
The border line is drawn along a TikZ path with the given TikZ ⟨*options*⟩. Note that the TikZ `line width` option should not be used here.
The border lines adapt to the rounded corners of the `tcolorbox`. An inside border line will switch to sharp corners if necessary, an outside border line will always be rounded if not set to `sharp corners`.

```
\begin{tcolorbox}[enhanced,title=Rounded corners,fonttitle=\bfseries,boxsep=5pt,
  arc=8pt,
  borderline={0.5pt}{0pt}{red},
  borderline={0.5pt}{5pt}{blue,dotted},
  borderline={0.5pt}{-5pt}{green,dashed} ]
This is a tcolorbox.
\end{tcolorbox}

/tcb/no borderline (no default, initially set)
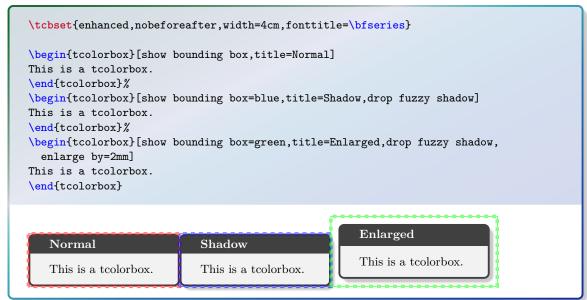

Removes all border lines if set before.

/tcb/show bounding box=⟨*color*⟩ (default `red`, initially unset)

Displays the bounding box borderline of a `tcolorbox`. Its intended use is debugging and
fine tuning. It should not be part of a final document. The optional ⟨*color*⟩ is the base
color for the bounding box borderline.

```
\tcbset{enhanced,nobeforeafter,width=4cm,fonttitle=\bfseries}

7.6 Shadow Option Keys

The following shadow options are applicable for most skins which use `tikzpicture` as `/tcb/graphical environment`→P.81. Therefore, the skin `standard`→P.140 does not support these shadows, but most other skins, e. g. `enhanced`→P.142.

The shadows are stackable, i. e. several different shadows can be used on the same `tcolorbox`. They are drawn *before* the box frame is drawn.

/tcb/no shadow (no default)
   Removes all shadows if set before.
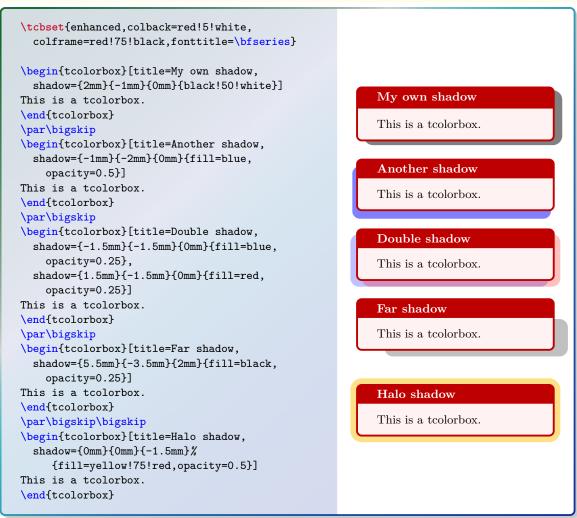

/tcb/shadow={⟨*xshift*⟩}{⟨*yshift*⟩}{⟨*offset*⟩}{⟨*options*⟩} (no default)
   Adds a new shadow to the stack of shadows. This shadow is follows the outline of the `tcolorbox` but is shifted by ⟨*xshift*⟩ and ⟨*yshift*⟩. The ⟨*offset*⟩ value is a distance value from the frame outline. A positive ⟨*offset*⟩ value shrinks the shadow and a negative ⟨*offset*⟩ value enlarges the shadow. The shadow is filled along a TikZ path with the given TikZ ⟨*options*⟩.
   The shadows adapt to the rounded corners of the `tcolorbox`. An shrinked shadow will switch to sharp corners if necessary, an enlarged shadow may become more rounded depending on several factors.

   Shadows are not considered for the bounding box computation by default. Large shadows may be overlaped by the following content. But, the bounding box can be adapted if necessary.

```
\tcbset{enhanced,colback=red!5!white,
  colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[title=My own shadow,
  shadow={2mm}{-1mm}{0mm}{black!50!white}]
This is a tcolorbox.
\end{tcolorbox}
\par\bigskip
\begin{tcolorbox}[title=Another shadow,
  shadow={-1mm}{-2mm}{0mm}{fill=blue,
    opacity=0.5}]
This is a tcolorbox.
\end{tcolorbox}
\par\bigskip
\begin{tcolorbox}[title=Double shadow,
  shadow={-1.5mm}{-1.5mm}{0mm}{fill=blue,
    opacity=0.25},
  shadow={1.5mm}{-1.5mm}{0mm}{fill=red,
    opacity=0.25}]
This is a tcolorbox.
\end{tcolorbox}
\par\bigskip
\begin{tcolorbox}[title=Far shadow,

This is a tcolorbox.

Halo shadow

This is a tcolorbox.

`/tcb/fuzzy shadow`=`{`⟨*xshift*⟩`}{`⟨*yshift*⟩`}{`⟨*offset*⟩`}{`⟨*step*⟩`}{`⟨*options*⟩`}`   (no default)
Adds a new fuzzy shadow to the stack of shadows. Actually, this option adds several shadows which appear like a shadow with a fuzzy border. This fuzzy shadow is follows the outline of the `tcolorbox` but is shifted by ⟨*xshift*⟩ and ⟨*yshift*⟩. The ⟨*offset*⟩ value is a distance value from the frame outline. A positive ⟨*offset*⟩ value shrinks the shadow and a negative ⟨*offset*⟩ value enlarges the shadow. The `{`⟨*step*⟩`}` value describes a shrink offset used for the combination of the partial shadows. The shadow is filled along a Ti*k*Z path with the given Ti*k*Z ⟨*options*⟩ but any `opacity` value will be ignored.

```
\tcbset{enhanced,colback=red!5!white,
   colframe=red!75!black,fonttitle=\bfseries}

> **Another halo**
>
> This is a tcolorbox.

/tcb/fuzzy halo=⟨*size*⟩ with ⟨*color*⟩ (style, default `0.9mm` with `yellow`)

Adds a new fuzzy halo shadow with the given ⟨*color*⟩ which overlaps the colorbox an all sides by ⟨*size*⟩ plus `0.48mm`.

```
\tcbset{enhanced,colback=red!5!white,
  colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[title=My own halo,fuzzy halo]
This is a tcolorbox.
\end{tcolorbox}
\par\bigskip\bigskip
\begin{tcolorbox}[title=Another halo,
  fuzzy halo=2mm with green]
This is a tcolorbox.
\end{tcolorbox}
```

> **My own halo**
>
> This is a tcolorbox.

> **Another halo**
>
> This is a tcolorbox.

```
\begin{tcolorbox}[blank,enhanced jigsaw,boxsep=2pt,arc=2pt,
  fuzzy halo=2mm with red!50!white,
  fuzzy halo=1mm with white]
\lipsum[1]
\end{tcolorbox}
```

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. For all following shadows, the optionally given ⟨*color*⟩ for the shadow can be changed equivalent to the preceding examples.

/tcb/drop shadow southeast=⟨*color*⟩ (style, default `black!50!white`)
    Adds a new shadow with standard dimensions to the stack of shadows. This shadow is identical to **/tcb/drop shadow**[→ P. 123].

```
\begin{tcolorbox}[drop shadow southeast,
  enhanced,colback=red!5!white,colframe=red!75!black]
  This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/drop shadow south=⟨*color*⟩ (style, default `black!50!white`)
    Adds a new shadow with standard dimensions to the stack of shadows. This shadow is identical to **/tcb/drop midday shadow**[→ P. 123].

```
\begin{tcolorbox}[drop shadow south,
  enhanced,colback=red!5!white,colframe=red!75!black]
  This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/drop shadow southwest=⟨*color*⟩ (style, default `black!50!white`)
    Adds a new shadow with standard dimensions to the stack of shadows.

```
\begin{tcolorbox}[drop shadow southwest,
  enhanced,colback=red!5!white,colframe=red!75!black]
  This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/drop shadow west=⟨*color*⟩ (style, default `black!50!white`)
    Adds a new shadow with standard dimensions to the stack of shadows.

```
\begin{tcolorbox}[drop shadow west,
  enhanced,colback=red!5!white,colframe=red!75!black]
  This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/drop shadow northwest=⟨*color*⟩ (style, default `black!50!white`)
    Adds a new shadow with standard dimensions to the stack of shadows.

```
\begin{tcolorbox}[drop shadow northwest,
  enhanced,colback=red!5!white,colframe=red!75!black]
  This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/drop shadow north=⟨*color*⟩ (style, default `black!50!white`)
    Adds a new shadow with standard dimensions to the stack of shadows.

```
\begin{tcolorbox}[drop shadow north,
  enhanced,colback=red!5!white,colframe=red!75!black]
  This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/drop shadow northeast=⟨*color*⟩   (style, default `black!50!white`)

Adds a new shadow with standard dimensions to the stack of shadows.

```
\begin{tcolorbox}[drop shadow northeast,
  enhanced,colback=red!5!white,colframe=red!75!black]
  This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/drop shadow east=⟨*color*⟩   (style, default `black!50!white`)

Adds a new shadow with standard dimensions to the stack of shadows.

```
\begin{tcolorbox}[drop shadow east,
  enhanced,colback=red!5!white,colframe=red!75!black]
  This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/drop fuzzy shadow southeast=⟨*color*⟩   (style, default `black!50!white`)

Adds a new fuzzy shadow with standard dimensions to the stack of shadows. This shadow
is identical to `/tcb/drop fuzzy shadow`^{→P.123}.

```
\begin{tcolorbox}[drop fuzzy shadow southeast,
  enhanced,colback=red!5!white,colframe=red!75!black]
  This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/drop fuzzy shadow south=⟨*color*⟩   (style, default `black!50!white`)

Adds a new fuzzy shadow with standard dimensions to the stack of shadows. This shadow
is identical to `/tcb/drop fuzzy midday shadow`^{→P.123}.

```
\begin{tcolorbox}[drop fuzzy shadow south,
  enhanced,colback=red!5!white,colframe=red!75!black]
  This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/drop fuzzy shadow southwest=⟨*color*⟩   (style, default `black!50!white`)

Adds a new fuzzy shadow with standard dimensions to the stack of shadows.

```
\begin{tcolorbox}[drop fuzzy shadow southwest,
  enhanced,colback=red!5!white,colframe=red!75!black]
  This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/drop fuzzy shadow west=⟨*color*⟩   (style, default `black!50!white`)

Adds a new fuzzy shadow with standard dimensions to the stack of shadows.

```
\begin{tcolorbox}[drop fuzzy shadow west,
  enhanced,colback=red!5!white,colframe=red!75!black]
  This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/drop fuzzy shadow northwest=⟨*color*⟩   (style, default `black!50!white`)
Adds a new fuzzy shadow with standard dimensions to the stack of shadows.

```
\begin{tcolorbox}[drop fuzzy shadow northwest,
  enhanced,colback=red!5!white,colframe=red!75!black]
  This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/drop fuzzy shadow north=⟨*color*⟩   (style, default `black!50!white`)
Adds a new fuzzy shadow with standard dimensions to the stack of shadows.

```
\begin{tcolorbox}[drop fuzzy shadow north,
  enhanced,colback=red!5!white,colframe=red!75!black]
  This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/drop fuzzy shadow northeast=⟨*color*⟩   (style, default `black!50!white`)
Adds a new fuzzy shadow with standard dimensions to the stack of shadows.

```
\begin{tcolorbox}[drop fuzzy shadow northeast,
  enhanced,colback=red!5!white,colframe=red!75!black]
  This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/drop fuzzy shadow east=⟨*color*⟩   (style, default `black!50!white`)
Adds a new fuzzy shadow with standard dimensions to the stack of shadows.

```
\begin{tcolorbox}[drop fuzzy shadow east,
  enhanced,colback=red!5!white,colframe=red!75!black]
  This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

/tcb/lifted shadow={⟨*xshift*⟩}{⟨*yshift*⟩}{⟨*bend*⟩}{⟨*step*⟩}{⟨*options*⟩}   (no default)

Adds a new lifted shadow to the stack of shadows. Actually, this option adds several shadows which appear like a shadow with a fuzzy border. This lifted shadow is follows the outline of the `tcolorbox` but is shifted by ⟨*xshift*⟩ and ⟨*yshift*⟩ on the lower left corner and by −⟨*xshift*⟩ and ⟨*yshift*⟩ on the lower right corner. Additionally, there is a ⟨*bend*⟩ in the middle. The {⟨*step*⟩} value describes a shrink offset used for the combination of the partial shadows. The shadow is filled along a Ti*k*Z path with the given Ti*k*Z ⟨*options*⟩ but any `opacity` value will be ignored.

```
\tcbset{enhanced,colback=red!5!white,
  boxrule=0.1pt,
  colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[title=My own shadow,
  lifted shadow={1mm}{-2mm}{3mm}{0.1mm}%
              {black!50!white}]
This is a tcolorbox.
\end{tcolorbox}
```

> **My own shadow**
>
> This is a tcolorbox.

/tcb/drop lifted shadow=⟨*color*⟩   (style, default `black!50!white`)

Adds a new lifted shadow with standard dimensions to the stack of shadows. Optionally, the ⟨*color*⟩ for the shadow can be changed.
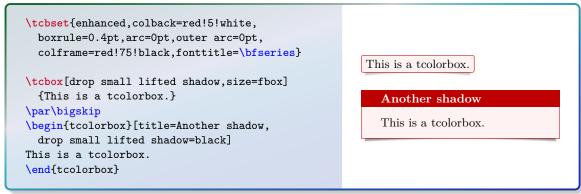

```
\tcbset{enhanced,colback=red!5!white,
  boxrule=0.4pt,arc=0pt,outer arc=0pt,
  colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[drop lifted shadow]
This is a tcolorbox.
\end{tcolorbox}\par\bigskip
\begin{tcolorbox}[title=Another shadow,
  drop lifted shadow=blue]
This is a tcolorbox.
\end{tcolorbox}
```

> This is a tcolorbox.

> **Another shadow**
>
> This is a tcolorbox.

/tcb/drop small lifted shadow=⟨*color*⟩   (style, default `black!50!white`)

Adds a new small lifted shadow with standard dimensions to the stack of shadows. Optionally, the ⟨*color*⟩ for the shadow can be changed.

```
\tcbset{enhanced,colback=red!5!white,
  boxrule=0.4pt,arc=0pt,outer arc=0pt,
  colframe=red!75!black,fonttitle=\bfseries}

\tcbox[drop small lifted shadow,size=fbox]
  {This is a tcolorbox.}
\par\bigskip
\begin{tcolorbox}[title=Another shadow,
  drop small lifted shadow=black]
This is a tcolorbox.
\end{tcolorbox}
```

> This is a tcolorbox.

> **Another shadow**
>
> This is a tcolorbox.

/tcb/drop large lifted shadow=⟨*color*⟩ (style, default `black!50!white`)

Adds a new large lifted shadow with standard dimensions to the stack of shadows. Optionally, the ⟨*color*⟩ for the shadow can be changed.

```
\tcbset{enhanced,colback=red!5!white,
  colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[drop large lifted shadow]
This is a tcolorbox.
\end{tcolorbox}\par\bigskip
\begin{tcolorbox}[title=Another shadow,
  drop large lifted shadow=blue]
This is a tcolorbox.
\end{tcolorbox}
```

This is a tcolorbox.

Another shadow

This is a tcolorbox.

7.7 Ti*k*Z Picture Option Keys

The following general options are applicable for skins which use `tikzpicture` as `/tcb/graphical environment`→P. 81. Therefore, the skin `standard`→P. 140 does not support these options, but most other skins, e. g. `enhanced`→P. 142.

/tcb/tikz=⟨*tikz option list*⟩ (no default, initially empty)
Adds the given ⟨*tikz option list*⟩ to the main `tikzpicture` environment used to draw the color box, see [19]. If this option is applied a second time, the new ⟨*tikz option list*⟩ is appended to the current option list.

```
\tcbset{enhanced,colback=red!5!white,
  colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[title=Transparent box,
  tikz={opacity=0.5,transparency group}]
This is a tcolorbox.
\end{tcolorbox}
```

```
\tcbset{enhanced,colback=red!5!white,
  colframe=red!75!black,fonttitle=\bfseries,
  fontupper=\bfseries\Huge,
  center title,center upper}

\begin{tcolorbox}[title=Rotated box,
  tikz={rotate=30}]
Sold!
\end{tcolorbox}
```

/tcb/tikz reset (initially set)
Removes all options given by `/tcb/tikz`.

/tcb/at begin tikz=⟨*tikz code*⟩ (no default, initially empty)
The given ⟨*tikz code*⟩ is executed at the beginning of the `tikzpicture` environment after the Ti*k*Z option `execute at begin picture` was applied. If this option is applied a second time, the new ⟨*tikz code*⟩ is appended to the current code.

/tcb/at begin tikz reset (initially set)
Removes all code given by `/tcb/at begin tikz`.

/tcb/at end tikz=⟨*tikz code*⟩ (no default, initially empty)
The given ⟨*tikz code*⟩ is executed at the ending of the `tikzpicture` environment before the Ti*k*Z option `execute at end picture` was applied. If this option is applied a second time, the new ⟨*tikz code*⟩ is appended to the current code.

/tcb/at end tikz reset (initially set)
Removes all code given by `/tcb/at end tikz`.

/tcb/rotate=⟨*angle*⟩ (no default, initially unset)

Rotates the tcolorbox by the given ⟨*angle*⟩. Note that this is a Ti*k*Z coordinate transformation i.e. not all graphical elements like shadings will really be rotated.
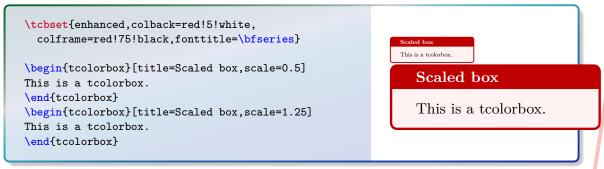

```
\tcbset{enhanced,colback=red!5!white,
  colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[title=Rotated box,rotate=30]
This is a tcolorbox.
\end{tcolorbox}
```

/tcb/scale=⟨*fraction*⟩ (no default, initially unset)

Scales the tcolorbox by the given ⟨*fraction*⟩. Note that this is a Ti*k*Z coordinate transformation i.e. not all graphical elements like line widths will really be scaled.

```
\tcbset{enhanced,colback=red!5!white,
  colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[title=Scaled box,scale=0.5]
This is a tcolorbox.
\end{tcolorbox}
\begin{tcolorbox}[title=Scaled box,scale=1.25]
This is a tcolorbox.
\end{tcolorbox}
```

Scaled box

This is a tcolorbox.

/tcb/remember (style, initially unset)

Shortcut for tikz={remember picture}. This allows one to reference nodes in other Ti*k*Z pictures.

```
\begin{tcolorbox}[enhanced,remember,colback=red!5!white,colframe=red!75!black,
  fonttitle=\bfseries,title=The four corners of a paper,
  overlay={\draw[red!50!white,line width=1mm,opacity=0.5,shorten >=3mm]
    (frame.north west) edge[->] (current page.north west)
    (frame.north east) edge[->] (current page.north east)
    (frame.south west) edge[->] (current page.south west)
    (frame.south east) edge[->] (current page.south east);}]
This is a tcolorbox.
\end{tcolorbox}
```

The four corners of a paper

This is a tcolorbox.

131

The `frame` node will be remembered by the given ⟨*name*⟩ to be referenced in other Ti*k*Z pictures.

```
% \usepackage{lipsum}
\newtcolorbox{mybox}[1][]{enhanced,colframe=blue!75!black,colback=blue!10!white,
  fonttitle=\bfseries,#1}

\begin{mybox}[title=First Box,nobeforeafter,width=\linewidth/4,remember as=one]
This is a test.
\end{mybox}
\hfill
\begin{mybox}[title=Second Box,nobeforeafter,width=\linewidth/4,remember as=two]
This is a test.
\end{mybox}
\hfill
\begin{mybox}[title=Third Box,nobeforeafter,width=\linewidth/4,remember as=three]
This is a test.
\end{mybox}

\lipsum[2]

\begin{mybox}[title=Fourth Box,remember as=four]
This is a test.
\end{mybox}

\begin{tikzpicture}[overlay,remember picture,line width=1mm,draw=red!75!black]
  \draw[->] (one.east) to[bend right] node[above] {A} (two.west);
  \draw[->] (two.east) to[bend left] node[above] {B} (three.west);
  \draw[->] (three.east) to[bend left=90] node[right] {C} (four.east);
  \draw[->] (four.west) to[bend left=90] node[left] {D} (one.west);
\end{tikzpicture}
```

7.8 Underlay Option Keys

Underlays are quite similar to overlays described in Section 3.8 on page 50. Underlays are drawn *after* the frame and interior are drawn and *before* overlays and the text content is drawn; see Section 6.4 on page 89 for the general drawing scheme.

The differences between underlays and overlays are:

- Underlays are not applicable for the skins `standard`→P.140 and `standard jigsaw`→P.141, whereas overlays are applicable also for these skins. The skin `spartan`→P.178 supports underlays but no overlays.

  If an underlay is used with the `standard`→P.140 skin, it is silently ignored.

- Underlays are stackable, i.e. several different underlays can be used on the same `tcolorbox`. Overlays are not stackable by default (but with some help of the library [LIB] hooks).

- Boxed titles are implemented with underlays (Section 7.2 on page 99), watermarks are implemented with overlays (Section 7.3 on page 106).

/tcb/underlay=⟨*graphical code*⟩   (no default, initially unset)

Adds ⟨*graphical code*⟩ to the box drawing process. This ⟨*graphical code*⟩ is drawn *after* the frame and interior and *before* the text content.

```
\newtcolorbox{mybox}[1][]{enhanced,colback=red!5!white,
  colbacktitle=red!85!black!50!white,
  colframe=red!75!black,fonttitle=\bfseries,watermark color=yellow!50!white,
  underlay={\begin{tcbclipinterior}
    \draw[red!40!white,line width=1cm] (interior.south west)--(interior.north east);
    \end{tcbclipinterior}},
  attach boxed title to top center={yshift=-2mm},#1}

\begin{mybox}[title=My box,watermark text=My Watermark]
\lipsum[2]
\end{mybox}
```

My box

Nam dui ligula, fringilla a, euismod sodales, sollicitudin vel, wisi. Morbi auctor lorem non justo. Nam lacus libero, pretium at, lobortis vitae, ultricies et, tellus. Donec aliquet, tortor sed accumsan bibendum, erat ligula aliquet magna, vitae ornare odio metus a mi. Morbi ac orci et nisl hendrerit mollis. Suspendisse ut massa. Cras nec ante. Pellentesque a nulla. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Aliquam tincidunt urna. Nulla ullamcorper vestibulum turpis. Pellentesque cursus luctus mauris.

/tcb/no underlay   (style, no default, initially set)

Removes the underlay if set before.

`/tcb/underlay broken`=⟨*graphical code*⟩ (no default, initially unset)

If the box is set to be `/tcb/breakable`^{→P. 246} and *is* broken actually, then the ⟨*graphical code*⟩ is added to the box drawing process. `/tcb/underlay`^{→P. 133} overwrites this key.

`/tcb/underlay unbroken`=⟨*graphical code*⟩ (no default, initially unset)

If the box is set to be `/tcb/breakable`^{→P. 246} but *is not* broken actually or if the box is set to be `/tcb/unbreakable`^{→P. 247}, then the ⟨*graphical code*⟩ is added to the box drawing process. `/tcb/underlay`^{→P. 133} overwrites this key.

`/tcb/no underlay unbroken` (style, no default, initially set)

Removes the unbroken underlay if set before.

`/tcb/underlay first`=⟨*graphical code*⟩ (no default, initially unset)

If the box is set to be `/tcb/breakable`^{→P. 246} and *is* broken actually, then the ⟨*graphical code*⟩ is added to the box drawing process for the *first* part of the break sequence. `/tcb/underlay`^{→P. 133} overwrites this key.

`/tcb/no underlay first` (style, no default, initially set)

Removes the first underlay if set before.

`/tcb/underlay middle`=⟨*graphical code*⟩ (no default, initially unset)

If the box is set to be `/tcb/breakable`^{→P. 246} and *is* broken actually, then the ⟨*graphical code*⟩ is added to the box drawing process for the *middle* parts (if any) of the break sequence. `/tcb/underlay`^{→P. 133} overwrites this key.

`/tcb/no underlay middle` (style, no default, initially set)

Removes the middle underlay if set before.

`/tcb/underlay last`=⟨*graphical code*⟩ (no default, initially unset)

If the box is set to be `/tcb/breakable`^{→P. 246} and *is* broken actually, then the ⟨*graphical code*⟩ is added to the box drawing process for the *last* part of the break sequence. `/tcb/underlay`^{→P. 133} overwrites this key.

`/tcb/no underlay last` (style, no default, initially set)

Removes the last underlay if set before.

`/tcb/underlay boxed title`=⟨*graphical code*⟩ (no default, initially unset)

If the box has a *boxed title*, see Section 7.2 on page 99, then the ⟨*graphical code*⟩ is added to the box drawing process *before* the boxed title is drawn.

`/tcb/no underlay boxed title` (style, no default, initially set)

Removes the boxed title underlay if set before.

`/tcb/underlay unbroken and first`=⟨*graphical code*⟩ (no default, initially unset)

This is an abbreviation for setting `/tcb/underlay unbroken` and `/tcb/underlay first` together. `/tcb/underlay`^{→P. 133} overwrites this key.

`/tcb/underlay middle and last`=⟨*graphical code*⟩ (no default, initially unset)

This is an abbreviation for setting `/tcb/underlay middle` and `/tcb/underlay last` together. `/tcb/underlay`^{→P. 133} overwrites this key.

`/tcb/underlay unbroken and last`=⟨*graphical code*⟩ (no default, initially unset)

This is an abbreviation for setting `/tcb/underlay unbroken` and `/tcb/underlay last` together. `/tcb/underlay`^{→P. 133} overwrites this key.

7.9 Finish Option Keys

Finishes are quite similar to underlays described in Section 7.8 on page 133 and overlays described in Section 3.8 on page 50. Finishes are drawn *after* the text content is drawn; see Section 6.4 on page 89 for the general drawing scheme. Therefore, a finish will reduce the readability of the text content.

Finishes are intended for special effects like highlights or glosses or text over text.

- Finishes are only applicable for the skins `enhanced`→P. 142, `empty`→P. 169, `freelance`→P. 181, `bicolor`→P. 155, `beamer`→P. 160, and `widget`→P. 165.

If a finish is used with the `standard`→P. 140 skin, it is silently ignored.

- Finishes are stackable, i.e. several different finishes can be used on the same `tcolorbox`.

`/tcb/finish`=⟨*graphical code*⟩   (no default, initially unset)

Adds ⟨*graphical code*⟩ to the box drawing process. This ⟨*graphical code*⟩ is drawn *after* the text content.

```
\newtcolorbox{mybox}[1][]{enhanced,colback=red!5!white,
  colbacktitle=red!85!black!50!white,colframe=red!75!black,fonttitle=\bfseries,
  finish={\begin{tcbclipframe}
    \path[bottom color=black,top color=black!50!white,opacity=0.1]
      (frame.south west) -- (frame.south east) -- (frame.north east) -- cycle;
    \path[top color=white,bottom color=black!50!white,opacity=0.1]
      (frame.south west) -- (frame.north east) -- (frame.north west) -- cycle;
    \end{tcbclipframe}},#1}

\begin{mybox}[title=My box]
\lipsum[2]
\end{mybox}
```

My box

Finish!

/tcb/no finish (style, no default, initially set)

Removes the finish if set before.

/tcb/finish broken=⟨*graphical code*⟩ (no default, initially unset)

If the box is set to be `/tcb/breakable`→P.246 and *is* broken actually, then the ⟨*graphical code*⟩ is added to the box drawing process. `/tcb/finish`→P.135 overwrites this key.

/tcb/finish unbroken=⟨*graphical code*⟩ (no default, initially unset)

If the box is set to be `/tcb/breakable`→P.246 but *is not* broken actually or if the box is set to be `/tcb/unbreakable`→P.247, then the ⟨*graphical code*⟩ is added to the box drawing process. `/tcb/finish`→P.135 overwrites this key.

/tcb/no finish unbroken (style, no default, initially set)

Removes the unbroken finish if set before.

/tcb/finish first=⟨*graphical code*⟩ (no default, initially unset)

If the box is set to be `/tcb/breakable`→P.246 and *is* broken actually, then the ⟨*graphical code*⟩ is added to the box drawing process for the *first* part of the break sequence. `/tcb/finish`→P.135 overwrites this key.

/tcb/no finish first (style, no default, initially set)

Removes the first finish if set before.

/tcb/finish middle=⟨*graphical code*⟩ (no default, initially unset)

If the box is set to be `/tcb/breakable`→P.246 and *is* broken actually, then the ⟨*graphical code*⟩ is added to the box drawing process for the *middle* parts (if any) of the break sequence. `/tcb/finish`→P.135 overwrites this key.

/tcb/no finish middle (style, no default, initially set)

Removes the middle finish if set before.

/tcb/finish last=⟨*graphical code*⟩ (no default, initially unset)

If the box is set to be `/tcb/breakable`→P.246 and *is* broken actually, then the ⟨*graphical code*⟩ is added to the box drawing process for the *last* part of the break sequence. `/tcb/finish`→P.135 overwrites this key.

/tcb/no finish last (style, no default, initially set)

Removes the last finish if set before.

/tcb/finish unbroken and first=⟨*graphical code*⟩ (no default, initially unset)

This is an abbreviation for setting `/tcb/finish unbroken` and `/tcb/finish first` together. `/tcb/finish`→P.135 overwrites this key.

/tcb/finish middle and last=⟨*graphical code*⟩ (no default, initially unset)

This is an abbreviation for setting `/tcb/finish middle` and `/tcb/finish last` together. `/tcb/finish`→P.135 overwrites this key.

/tcb/finish unbroken and last=⟨*graphical code*⟩ (no default, initially unset)

This is an abbreviation for setting `/tcb/finish unbroken` and `/tcb/finish last` together. `/tcb/finish`→P.135 overwrites this key.

7.10 Jigsaw Skin Variants

As described in Section 6.1 on page 81, a `tcolorbox` is drawn by up to four *engines*. Typically, the *frame* engine fills the complete box area with color and the other engines fill certain areas with other colors. Finally, only the area which you see as *frame* of the box will display the frame color. For most applications, this is a good approach.

For certain boxes, a more delicate procedure is needed. E.g., if the box should be translucent, an already painted area cannot be made unpainted. Therefore, more elaborate frame engines saw holes into the frame where the interior area and optionally the title area will be painted. The resulting skins are called *jigsaw* skins. For standard^{→P.140} and enhanced^{→P.142}, there are variants called standard jigsaw^{→P.141} and enhanced jigsaw^{→P.149}.

```
\newcommand{\ballexample}{\begin{tikzpicture}
  \path[use as bounding box] (0,0.8) rectangle +(0.1,0.1);
  \shadedraw [shading=ball] (0,0) circle (1cm);
  \shadedraw [ball color=red] (3,-2.2) circle (1cm);
\end{tikzpicture}}

\tcbset{enhanced,colback=blue!5!white,

Pellentesque cursus luctus mauris.

7.11 Draft Mode

To reduce the compilation time while drafting a document, the *draft mode* can be applied. Basically, it changes all skins to `spartan`→P.178 and sets the `/tcb/fit algorithm`→P.268 to `squeeze`. Especially, when fuzzy shadows are used, the speedup will be considerable high.

> It is strongly recommended that the draft mode is *not* used for the final document. Use `spartan`→P.178 directly, if you want to stay with it. The draft mode implementation may change in future.

> Normally, switching to the draft mode should not alter the geometry of your document. Since overlays are deactivated, any code placed there (e.g. counter changes) is not executed anymore! Also, `/tcb/remember as`→P.132 will not have any effect. You may exclude critical code with `\tcbinterruptdraftmode` / `\tcbcontinuedraftmode` from converting to draft mode.

`\tcbstartdraftmode`
> Any following `tcolorbox` code is put into *draft mode*. All skin settings are overruled with `spartan`→P.178. Overlays, watermarks, shadows, borderlines, and rounded corners are deactivated for all `tcolorbox` layers.

`\tcbstopdraftmode`
> The *draft mode* is deactivated for the following code.

`\tcbinterruptdraftmode`
> If the compilation is in *draft mode*, the *draft mode* is deactivated until a following `\tcbcontinuedraftmode` is detected.
> If the compilation is not in *draft mode*, nothing happens and a following `\tcbcontinuedraftmode` will not start the *draft mode*.
> > The pair `\tcbinterruptdraftmode` and `\tcbcontinuedraftmode` cannot be used nested.

`\tcbcontinuedraftmode`
> Continues the *draft mode* which was suspended by a preceding `\tcbinterruptdraftmode`. Nothing happens, if there was no draft mode before `\tcbinterruptdraftmode`.
> > Code, which is place between `\tcbinterruptdraftmode` and `\tcbcontinuedraftmode` is shielded from *draft mode*.

`/tcb/draftmode``=true|false`   (default `true`, initially `false`)
> If set to `true`, the *draft mode* is started. If set to `false`, the *draft mode* is stopped.

```
\newtcolorbox{mybeamer}[2][]{beamer,colback=Salmon!50!white,

7.12 Skin Family 'standard'

Note that the option keys /tcb/frame style[→P.93], /tcb/interior style[→P.94], /tcb/segmentation style[→P.96], and /tcb/title style[→P.96] are not be applicable to the standard skin. Also, watermarks (see Subsection 7.3) are not usable with the standard skin.

/tcb/skin=standard (skin)

This is the standard skin from the core package. All drawing engines are set to type `standard`. The drawing is based on `pgf` commands and does not need the `tikz` package.

> **Environment and engines for the skin 'standard'**
>
> /tcb/graphical environment[→P.81]: `pgfpicture`
> /tcb/frame engine[→P.82]: `standard`
> /tcb/interior titled engine[→P.82]: `standard`
> /tcb/interior engine[→P.83]: `standard`
> /tcb/segmentation engine[→P.83]: `standard`
> /tcb/title engine[→P.83]: `standard`

/tcb/standard (style, no value)

This is an abbreviation for setting `skin=standard`.

```

7.13 Skin Family 'enhanced'

If you like the standard appearance of a `tcolorbox` but you want to have some 'enhanced' features, the `enhanced` skin is what you are looking for.

/tcb/skin=enhanced (skin)

This skin translates the drawing commands of the core package into `tikz` path commands. Therefore, it allows all `tikz` high level options for these paths and has more flexibility compared to the `standard`[→P. 140] skin. You pay for this with some prolonged compilation time. The `tikz` path options can be given with the option keys `/tcb/frame style`[→P. 93], `/tcb/interior style`[→P. 94], `/tcb/segmentation style`[→P. 96], and `/tcb/title style`[→P. 96].

> **Environment and engines for the skin 'enhanced'**
>
> /tcb/graphical environment[→P. 81]: `tikzpicture`
> /tcb/frame engine[→P. 82]: `path`
> /tcb/interior titled engine[→P. 82]: `path`
> /tcb/interior engine[→P. 83]: `path`
> /tcb/segmentation engine[→P. 83]: `path`
> /tcb/title engine[→P. 83]: `path`

/tcb/enhanced (style, no value)

This is an abbreviation for setting `skin=enhanced`.

```
\tcbset{enhanced,equal height group=enhanced,
  colback=LightGreen,colframe=DarkGreen,colbacklower=LimeGreen!75!LightGreen,
  width=(\linewidth-6mm)/4,nobeforeafter,
  left=1mm,right=1mm,top=1mm,bottom=1mm,middle=1mm}
%
\begin{tcolorbox}

  \tcblower
  More content.
\end{tcolorbox}
```

```
% \usetikzlibrary{shadings}        % preamble
\tcbset{skin=enhanced,fonttitle=\bfseries,
  frame style={upper left=blue,upper right=red,lower left=yellow,lower right=green},
  interior style={white,opacity=0.5},
  segmentation style={black,solid,opacity=0.2,line width=1pt}}

\begin{tcolorbox}[title=Nice box in rainbow colors]
  With the 'enhanced' skin, it is quite easy to produce fancy looking effects.
  \tcblower
  Note that this is still a \texttt{tcolorbox}.
\end{tcolorbox}
```

Nice box in rainbow colors

With the 'enhanced' skin, it is quite easy to produce fancy looking effects.

Note that this is still a `tcolorbox`.

```
% \usetikzlibrary{decorations.pathmorphing} % preamble
\tcbset{skin=enhanced,fonttitle=\bfseries,boxrule=1mm,
  frame style={draw=FireBrick,fill=Salmon},drop fuzzy shadow,
  interior style={draw=FireBrick,top color=Salmon!10,bottom color=Salmon!20},
  segmentation style={draw=FireBrick,solid,decorate,
        decoration={coil,aspect=0,segment length=10.1mm}}}

\begin{tcblisting}{title=A listing box with shadow and some specials}
Of course, skins can be used for listings also.
\begin{equation}
  \int\limits_1^2 \frac{1}{x}~dx = \ln(2).
\end{equation}
\end{tcblisting}
```

A listing box with shadow and some specials

```
Of course, skins can be used for listings also.
\begin{equation}
  \int\limits_1^2 \frac{1}{x}~dx = \ln(2).
\end{equation}
```

Of course, skins can be used for listings also.

$$\int\limits_1^2 \frac{1}{x}\,dx = \ln(2). \tag{2}$$

/tcb/enhanced standard (style, no value)

For unbreakable boxes, this is identical to using `/tcb/enhanced`^{→P. 142}. But, for breakable boxes, the *break sequence* is identical to the `standard`^{→P. 140} skin, see Section 11.5 from page 251.

/tcb/blank (style, initially unset)

This style relies on the skin `enhanced`^{→P. 142}. All drawing operations are hidden and all margins are set to 0pt. See `/tcb/blanker`^{→P. 170} for switching off the drawing engines.

```
\begin{tcolorbox}[blank,watermark text=A blank box]
\lipsum[1]
\end{tcolorbox}
```

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. \tcbline
Sometimes, a line is only a line. With `\tcblower`[→P.9] you separate the box content into two functional units. **\tcbline** draws only a line which looks like the segmentation line between upper and lower part. Furthermore, you can use **\tcbline** more than just once. **\tcbline** always uses the `path` drawing engine. Therefore, the `/tcb/segmentation style`[→P.96] can be applied.

```

7.14 Skin Family 'bicolor'

/tcb/skin=bicolor (skin)

This skin is quite similar to the standard$^{\rightarrow P.\,140}$ and enhanced$^{\rightarrow P.\,142}$ skin. But instead of a segmentation line, the optional lower part of the box is filled with a different color or drawn with a different style.

> **Environment and engines for the skin 'bicolor'**
>
> /tcb/graphical environment$^{\rightarrow P.\,81}$: tikzpicture
> /tcb/frame engine$^{\rightarrow P.\,82}$:   path
> /tcb/interior titled engine$^{\rightarrow P.\,82}$: *special*
> /tcb/interior engine$^{\rightarrow P.\,83}$:   *special*
> /tcb/segmentation engine$^{\rightarrow P.\,83}$: *special*
> /tcb/title engine$^{\rightarrow P.\,83}$:   path

- The most basic usage of this skin is to set the background color of the lower part by /tcb/colbacklower$^{\rightarrow P.\,156}$ and all other options like for the standard$^{\rightarrow P.\,140}$ skin.

```
\begin{tcolorbox}[skin=bicolor,title=The title,
    colframe=FireBrick!75!black,colback=Salmon!50!white,colbacklower=Salmon]
  The upper part.
  \tcblower
  The lower part.
\end{tcolorbox}
```

> **The title**
>
> The upper part.
>
> The lower part.

- The more advanced usage of this skin is to apply the /tcb/frame style$^{\rightarrow P.\,93}$ and the /tcb/interior style$^{\rightarrow P.\,94}$ like for the enhanced$^{\rightarrow P.\,142}$ skin. Also, the /tcb/segmentation style$^{\rightarrow P.\,96}$ can be used, but it is applied to the whole lower part.

```
\begin{tcolorbox}[skin=bicolor,title=The title,
    frame style={top color=FireBrick,
                 bottom color=FireBrick!15!white,draw=black},
    interior style={left color=Salmon,right color=Salmon!50!white},
    segmentation style={right color=Salmon,left color=Salmon!50!white}]
  The upper part.
  \tcblower
  The lower part.
\end{tcolorbox}
```

> **The title**
>
> The upper part.
>
> The lower part.

/tcb/bicolor (style, no value)

This is an abbreviation for setting skin=bicolor.

```
\tcbset{bicolor,equal height group=bicolor,
  colback=LightGreen,colframe=DarkGreen,colbacklower=LimeGreen!75!LightGreen,
  width=(\linewidth-6mm)/4,nobeforeafter,
  left=1mm,right=1mm,top=1mm,bottom=1mm,middle=1mm}

7.15   Skin Family 'beamer'

/tcb/skin=beamer (skin)

This skin resembles boxes known from the `beamer` class and therefore is called 'beamer'. It uses the normal colors from the core package but shades them a little bit. To use this skin, the `tikz` library `shadings` has to be included in the preamble by:

```
\usetikzlibrary{shadings}
```
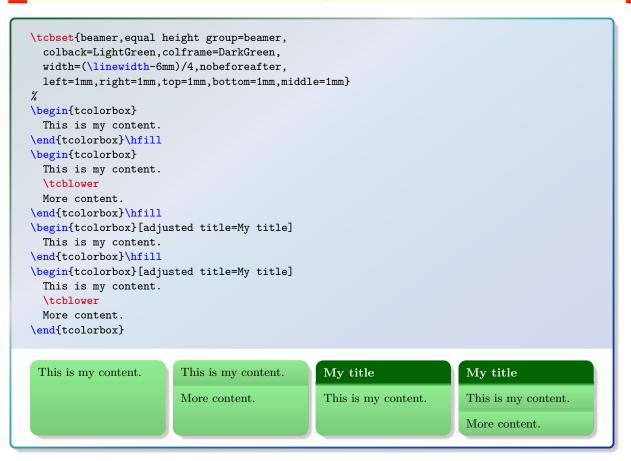

The appearance of the skin can be controlled by /tcb/frame style$^{\rightarrow P.\,93}$ and /tcb/interior style$^{\rightarrow P.\,94}$, if needed. Here, the *segmentation* cannot be controlled by a style.

Environment and engines for the skin 'beamer'

/tcb/graphical environment$^{\rightarrow P.\,81}$:   tikzpicture
/tcb/frame engine$^{\rightarrow P.\,82}$:   path
/tcb/interior titled engine$^{\rightarrow P.\,82}$:   *special*
/tcb/interior engine$^{\rightarrow P.\,83}$:   *special*
/tcb/segmentation engine$^{\rightarrow P.\,83}$:   *special*
/tcb/title engine$^{\rightarrow P.\,83}$:   path

/tcb/beamer (style, no value)

This is an abbreviation for setting `skin=beamer`.
It also changes the geometry and some style options.

```
\tcbset{beamer,equal height group=beamer,
  colback=LightGreen,colframe=DarkGreen,
  width=(\linewidth-6mm)/4,nobeforeafter,
  left=1mm,right=1mm,top=1mm,bottom=1mm,middle=1mm}

7.16 Skin Family 'widget'

/tcb/skin=widget (skin)

This skin uses the normal colors from the core package but shades them a little bit. To use this skin, the `tikz` library `shadings` has to be included in the preamble by:

```
\usetikzlibrary{shadings}
```

The appearance of the skin can be controlled by /tcb/frame style[→P. 93], /tcb/interior style[→P. 94], and /tcb/segmentation style[→P. 96], if needed.
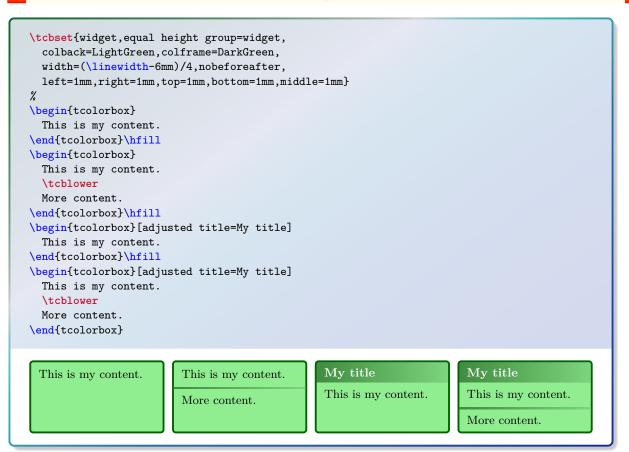

> **Environment and engines for the skin 'widget'**
>
> /tcb/graphical environment[→P. 81]:   tikzpicture
> /tcb/frame engine[→P. 82]:   path
> /tcb/interior titled engine[→P. 82]:   path
> /tcb/interior engine[→P. 83]:   path
> /tcb/segmentation engine[→P. 83]:   *special*
> /tcb/title engine[→P. 83]:   *special*

/tcb/widget (style, no value)

This is an abbreviation for setting `skin=widget`.
It also changes the geometry and some style options.

```
\tcbset{widget,equal height group=widget,
  colback=LightGreen,colframe=DarkGreen,
  width=(\linewidth-6mm)/4,nobeforeafter,
  left=1mm,right=1mm,top=1mm,bottom=1mm,middle=1mm}

7.17 Skin Family 'empty'

/tcb/skin=empty (skin)

This skin sets all engines to `empty`, i.e. nothing is drawn at all. Therefore, this skin is a good starting point to create a complete new style by yourself.

> **Environment and engines for the skin 'empty'**
>
> /tcb/graphical environment^{→P. 81}:   tikzpicture
> /tcb/frame engine^{→P. 82}:   empty
> /tcb/interior titled engine^{→P. 82}: empty
> /tcb/interior engine^{→P. 83}:   empty
> /tcb/segmentation engine^{→P. 83}: empty
> /tcb/title engine^{→P. 83}:   empty

/tcb/empty (style, no value)

This is an abbreviation for setting `skin=empty`.

```
\tcbset{empty,equal height group=empty,
  coltitle=Navy,borderline={2pt}{0pt}{black!10!white},
  width=(\linewidth-6mm)/4,nobeforeafter,
  left=1mm,right=1mm,top=1mm,bottom=1mm,middle=1mm}
%
\begin{tcolorbox}
  This is my content.
\end{tcolorbox}\hfill
\begin{tcolorbox}
  This is my content.
  \tcblower
  More content.
\end{tcolorbox}\hfill
\begin{tcolorbox}[adjusted title=My title]
  This is my content.
\end{tcolorbox}\hfill
\begin{tcolorbox}[adjusted title=My title]

This example demonstrates a breakable customized box. Here, we define an environment `freebox`. The first application of `freebox` produces an unbroken `tcolorbox`. The box is drawn by the code given by `/tcb/frame code`[→P.85] and `/tcb/interior code`[→P.86]. The second application of `freebox` is broken into several parts which are drawn by the codes given by `/tcb/skin first is subskin of`[→P.88], `/tcb/skin middle is subskin of`[→P.88], and `/tcb/skin last is subskin of`[→P.88].

```

7.18 Skin 'spartan'
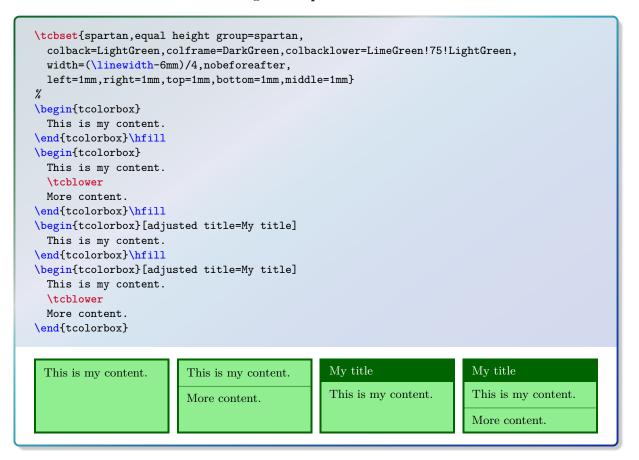

/tcb/skin=**spartan** (skin)

This skin is quite . . . spartan. It supports no rounded corners, no overlays, no shadows, no borderlines, and no finishes. The only exception are underlays. One cannot do very fancy things with this skin, but it compiles very fast. Therefore, the `spartan` skin is used for the draft mode, see Section 7.11 on page 139. Nevertheless, it can be used as a normal skin.

> **Environment and engines for the skin 'spartan'**
>
> /tcb/graphical environment^{→P.81}: tikzpicture

7.20 Skin Family 'freelance'

This skin family 'freelance' is deprecated with `tcolorbox` 3.00. It is not longer needed, because `/tcb/frame code`$^{\rightarrow P.85}$, `/tcb/interior code`$^{\rightarrow P.86}$, `/tcb/interior titled code`$^{\rightarrow P.85}$, and `/tcb/title code`$^{\rightarrow P.87}$ can be applied to every skin now. In this sense, everything has become *freelance* now.

For users of `/tcb/freelance`: Old code should continue to work. There may be exceptions for breakable freelance boxes under certain circumstances. For new code, use `/tcb/empty`$^{\rightarrow P.169}$ or `/tcb/enhanced`$^{\rightarrow P.142}$ where you would have used `/tcb/freelance` before.

/tcb/skin=freelance (skin)

This skin gives full freedom for the appearance of the `tcolorbox`. All drawing engines are set to type `freelance`; they use the `tikz` package and compute the `/tcb/geometry nodes`$^{\rightarrow P.84}$.

> **Environment and engines for the skin 'freelance'**
>
> `/tcb/graphical environment`$^{\rightarrow P.81}$:   `tikzpicture`
> `/tcb/frame engine`$^{\rightarrow P.82}$:   `freelance`
> `/tcb/interior titled engine`$^{\rightarrow P.82}$:   `freelance`
> `/tcb/interior engine`$^{\rightarrow P.83}$:   `freelance`
> `/tcb/segmentation engine`$^{\rightarrow P.83}$:   `freelance`
> `/tcb/title engine`$^{\rightarrow P.83}$:   `freelance`

/tcb/freelance (style, no value)

This is an abbreviation for setting `skin=freelance`.

/tcb/skin=freelancefirst (skin)

This skin equals `freelance` with exception of the break sequence, see Section 11.5 on page 251.

/tcb/skin=freelancemiddle (skin)

This skin equals `freelance` with exception of the break sequence, see Section 11.5 on page 251.

/tcb/skin=freelancelast (skin)

This skin equals `freelance` with exception of the break sequence, see Section 11.5 on page 251.

/tcb/extend freelance=⟨*options*⟩ (no default, initially empty)

The ⟨*options*⟩ are added to the skin definition of `freelance`.

/tcb/extend freelancefirst=⟨*options*⟩ (no default, initially empty)

The ⟨*options*⟩ are added to the skin definition of `freelancefirst` which is used as first part of the break sequence of `freelance`. See `/tcb/skin first is subskin of`$^{\rightarrow P.88}$ for a substitute of this key.

/tcb/extend freelancemiddle=⟨*options*⟩ (no default, initially empty)

The ⟨*options*⟩ are added to the skin definition of `freelancemiddle` which is used as middle part of the break sequence of `freelance`. See `/tcb/skin middle is subskin of`$^{\rightarrow P.88}$ for a substitute of this key.

/tcb/extend freelancelast=⟨*options*⟩ (no default, initially empty)

The ⟨*options*⟩ are added to the skin definition of `freelancelast` which is used as last part of the break sequence of `freelance`. See `/tcb/skin last is subskin of`$^{\rightarrow P.88}$ for a substitute of this key.

8 Ti*k*Z Image and Picture Fill Extensions

The ⬛LIB skins library adds some image and picture fill options to the vast option set of Ti*k*Z [19]. These options can be used in any `tikzpicture`. For the following options, the ⬛LIB skins library has to be loaded by a package option or inside the preamble by:

```
\tcbuselibrary{skins}
```

See Section 7 on page 93 for the documentation of all other options of the ⬛LIB skins library.

8.1 Fill Plain

/tikz/fill plain image=⟨*file name*⟩   (no default, initially unset)

Fills the current path with an external image referenced by ⟨*file name*⟩. The image is put in the center of the path, but it is not resized to fit into the path area.

```
\begin{tikzpicture}
\path[draw,fill plain image=goldshade.png]
  (2.75,-0.75) -- (3,0) -- (2.75,0.75)
  \foreach \w in {45,90,...,315}
    { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

/tikz/fill plain image*=⟨*file name*⟩   (no default, initially unset)

Fills the current path with an external image referenced by ⟨*file name*⟩. The image is put in the center of the path, but it is not resized to fit into the path area. The ⟨*graphics options*⟩ are given to the underlying `\includegraphics` command.

```
\begin{tikzpicture}
\path[draw,fill plain ↝
      ↜image*={width=2.5cm}{goldshade.png}]
  (2.75,-0.75) -- (3,0) -- (2.75,0.75)
  \foreach \w in {45,90,...,315}
    { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

/tikz/fill plain picture=⟨*graphical code*⟩   (no default, initially unset)

Fills the current path with the given ⟨*graphical code*⟩. The result is put in the center of the path, but it is not resized to fit into the path area. Note that this is almost identical to the standard `path picture` option.

```
\begin{tikzpicture}
\path[draw,fill plain picture={%
  \draw[red!50!yellow,line width=2mm]
    (0,0) circle (1cm);
  \draw[red,line width=5mm] (-1,-1) -- (1,1);
  \draw[red,line width=5mm] (-1,1) -- (1,-1);
  }]
  (2.75,-0.75) -- (3,0) -- (2.75,0.75)
  \foreach \w in {45,90,...,315}
    { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

8.2 Fill Stretch

/tikz/fill stretch image=⟨*file name*⟩ (no default, initially unset)

Fills the current path with an external image referenced by ⟨*file name*⟩. The image is stretched to fill the path area.

```
\begin{tikzpicture}
\path[fill stretch image=goldshade.png]
  (2.75,-0.75) -- (3,0) -- (2.75,0.75)
  \foreach \w in {45,90,...,315}
    { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

/tikz/fill stretch image*={⟨*graphics options*⟩}{⟨*file name*⟩}   (no default, initially unset)

Fills the current path with an external image referenced by ⟨*file name*⟩. The ⟨*graphics options*⟩ are given to the underlying `\includegraphics` command. The image is stretched to fill the path area.

```
\begin{tikzpicture}
\path[fill stretch image*=
  {angle=90,origin=c}{goldshade.png}]
  (2.75,-0.75) -- (3,0) -- (2.75,0.75)
  \foreach \w in {45,90,...,315}
    { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

/tikz/fill stretch picture=⟨*graphical code*⟩ (no default, initially unset)

Fills the current path with the given ⟨*graphical code*⟩. The result is stretched to fill the path area.

```
\begin{tikzpicture}
\path[draw,fill stretch picture={%
  \draw[red!50!yellow,line width=2mm]
    (0,0) circle (1cm);
  \draw[red,line width=5mm] (-1,-1) -- (1,1);
  \draw[red,line width=5mm] (-1,1) -- (1,-1);
  }]
  (2.75,-0.75) -- (3,0) -- (2.75,0.75)
  \foreach \w in {45,90,...,315}
    { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

8.3 Fill Overzoom

/tikz/fill overzoom image=⟨*file name*⟩ (no default, initially unset)

Fills the current path with an external image referenced by ⟨*file name*⟩. The image is zoomed such that the path area fills the image.

```
\begin{tikzpicture}
\path[fill overzoom image=goldshade.png]
  (2.75,-0.75) -- (3,0) -- (2.75,0.75)
  \foreach \w in {45,90,...,315}
    { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

/tikz/fill overzoom image*={⟨*graphics options*⟩}{⟨*file name*⟩} (no default, initially unset)

Fills the current path with an external image referenced by ⟨*file name*⟩. The ⟨*graphics options*⟩ are given to the underlying **\includegraphics** command. The image is zoomed such that the path area fills the image.

```
\begin{tikzpicture}
\path[fill overzoom image*=
  {angle=90,origin=c}{goldshade.png}]
  (2.75,-0.75) -- (3,0) -- (2.75,0.75)
  \foreach \w in {45,90,...,315}
    { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

/tikz/fill overzoom picture=⟨*graphical code*⟩ (no default, initially unset)

Fills the current path with the given ⟨*graphical code*⟩. The result is zoomed such that the path area fills the image.

```
\begin{tikzpicture}
\path[draw,fill overzoom picture={%
  \draw[red!50!yellow,line width=2mm]
    (0,0) circle (1cm);
  \draw[red,line width=5mm] (-1,-1) -- (1,1);
  \draw[red,line width=5mm] (-1,1) -- (1,-1);
  }]
  (2.75,-0.75) -- (3,0) -- (2.75,0.75)
  \foreach \w in {45,90,...,315}
    { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

8.4 Fill Zoom

/tikz/fill zoom image=⟨*file name*⟩ (no default, initially unset)

Fills the current path with an external image referenced by ⟨*file name*⟩. The image is zoomed such that it fits inside the path area. Typically, some parts of the path area will stay unfilled.

```
\begin{tikzpicture}
\path[draw,fill zoom image=goldshade.png]
  (2.75,-0.75) -- (3,0) -- (2.75,0.75)
  \foreach \w in {45,90,...,315}
    { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

/tikz/fill zoom image*={⟨*graphics options*⟩}{⟨*file name*⟩} (no default, initially unset)

Fills the current path with an external image referenced by ⟨*file name*⟩. The ⟨*graphics options*⟩ are given to the underlying **\includegraphics** command. The image is zoomed such that it fits inside the path area. Typically, some parts of the path area will stay unfilled.

```
\begin{tikzpicture}
\path[draw,fill zoom image*=
  {angle=90,origin=c}{goldshade.png}]
  (2.75,-0.75) -- (3,0) -- (2.75,0.75)
  \foreach \w in {45,90,...,315}
    { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

/tikz/fill zoom picture=⟨*graphical code*⟩ (no default, initially unset)

Fills the current path with the given ⟨*graphical code*⟩. The result is zoomed such that it fits inside the path area. Typically, some parts of the path area will stay unfilled.

```
\begin{tikzpicture}
\path[draw,fill zoom picture={%
  \draw[red!50!yellow,line width=2mm]
    (0,0) circle (1cm);
  \draw[red,line width=5mm] (-1,-1) -- (1,1);
  \draw[red,line width=5mm] (-1,1) -- (1,-1);
  }]
  (2.75,-0.75) -- (3,0) -- (2.75,0.75)
  \foreach \w in {45,90,...,315}
    { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

8.5 Fill Shrink

/tikz/fill shrink image=⟨*file name*⟩   (no default, initially unset)

Fills the current path with an external image referenced by ⟨*file name*⟩. The image is zoomed such that it fits inside the path area, but it never gets enlarged. Typically, some parts of the path area will stay unfilled.

```
\begin{tikzpicture}
\path[draw,fill shrink image=goldshade.png]
    (2.75,-0.75) -- (3,0) -- (2.75,0.75)
    \foreach \w in {45,90,...,315}
        { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

/tikz/fill shrink image*=⟨*file name*⟩   (no default, initially unset)

Fills the current path with an external image referenced by ⟨*file name*⟩. The ⟨*graphics options*⟩ are given to the underlying `\includegraphics` command. The image is zoomed such that it fits inside the path area, but it never gets enlarged. Typically, some parts of the path area will stay unfilled.

```
\begin{tikzpicture}
\path[draw,fill shrink ⤸
        ↳image*={width=1.5cm}{goldshade.png}]
    (2.75,-0.75) -- (3,0) -- (2.75,0.75)
    \foreach \w in {45,90,...,315}
        { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

/tikz/fill shrink picture=⟨*graphical code*⟩   (no default, initially unset)

Fills the current path with the given ⟨*graphical code*⟩. The result is zoomed such that it fits inside the path area, but it never gets enlarged. Typically, some parts of the path area will stay unfilled.

```
\begin{tikzpicture}
\path[draw,fill shrink picture={%
    \draw[red!50!yellow,line width=2mm]
        (0,0) circle (1cm);
    \draw[red,line width=5mm] (-1,-1) -- (1,1);
    \draw[red,line width=5mm] (-1,1) -- (1,-1);
    }]
    (2.75,-0.75) -- (3,0) -- (2.75,0.75)
    \foreach \w in {45,90,...,315}
        { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

8.6 Fill Tile

/tikz/fill tile image=⟨*file name*⟩   (no default, initially unset)

Fills the current path with a tile pattern using an external image referenced by ⟨*file name*⟩.

```
\begin{tikzpicture}
\path[fill tile image=pink_marble.png]
  (2.75,-0.75) -- (3,0) -- (2.75,0.75)
  \foreach \w in {45,90,...,315}
    { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

/tikz/fill tile image*={⟨*graphics options*⟩}{⟨*file name*⟩}   (no default, initially unset)

Fills the current path with a tile pattern using an external image referenced by ⟨*file name*⟩. The ⟨*graphics options*⟩ are given to the underlying **\includegraphics** command.

```
\begin{tikzpicture}
\path[fill tile image*={width=1cm}{pink_marble.png}]
  (2.75,-0.75) -- (3,0) -- (2.75,0.75)
  \foreach \w in {45,90,...,315}
    { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

/tikz/fill tile picture=⟨*graphical code*⟩   (no default, initially unset)

Fills the current path with a tile pattern using the given ⟨*graphical code*⟩.

```
\begin{tikzpicture}
\path[draw,fill tile picture={%
  \draw[red!50!yellow,line width=2mm]
    (0,0) circle (1cm);
  \draw[red,line width=5mm] (-1,-1) -- (1,1);
  \draw[red,line width=5mm] (-1,1) -- (1,-1);
  }]
  (2.75,-0.75) -- (3,0) -- (2.75,0.75)
  \foreach \w in {45,90,...,315}
    { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

/tikz/fill tile picture*={⟨*fraction*⟩}{⟨*graphical code*⟩}   (no default, initially unset)

Fills the current path with a tile pattern using the given ⟨*graphical code*⟩. The graphic is resized by ⟨*fraction*⟩.

```
\begin{tikzpicture}
\path[draw,fill tile picture*={0.25}{%
  \draw[red!50!yellow,line width=2mm]
    (0,0) circle (1cm);
  \draw[red,line width=5mm] (-1,-1) -- (1,1);
  \draw[red,line width=5mm] (-1,1) -- (1,-1);
  }]
  (2.75,-0.75) -- (3,0) -- (2.75,0.75)
  \foreach \w in {45,90,...,315}
    { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```

8.7 Filling Options

`/tikz/fill image opacity`=⟨*fraction*⟩   (no default, initially `1.0`)

Sets the fill opacity for the image or picture fill options to the given ⟨*fraction*⟩.

```
\begin{tikzpicture}
\path[fill stretch image=goldshade.png] (0,0) circle (1cm);
\path[fill=red,fill stretch image=goldshade.png,fill image opacity=0.75]
  (2,0) circle (1cm);
\path[fill=red,fill stretch image=goldshade.png,fill image opacity=0.5]
  (4,0) circle (1cm);
\path[fill=red,fill stretch image=goldshade.png,fill image opacity=0.25]
  (6,0) circle (1cm);
\path[fill=red] (8,0) circle (1cm);
\end{tikzpicture}
```

`/tikz/fill image scale`=⟨*fraction*⟩   (no default, initially `1.0`)

Stretches, zooms, overzooms or shrinks the image or picture to the given ⟨*fraction*⟩ of the width and height of the current path.

```
\begin{tikzpicture}
\path[draw,fill zoom image=goldshade.png]
  (0,0) rectangle +(2,2);

\path[draw,fill zoom image=goldshade.png,fill image scale=0.75]
  (3,0) rectangle +(2,2);

\path[draw,fill zoom image=goldshade.png,fill image scale=1.5]
  (6,0) rectangle +(2,2);
\end{tikzpicture}
```

`/tikz/fill image options`=⟨*graphics options*⟩   (no default, initially empty)

The ⟨*graphics options*⟩ are given to the underlying `\includegraphics` command for the image fill options. This can be just together with `/tikz/fill stretch image`[→P. 183], `/tikz/fill overzoom image`[→P. 184], `/tikz/fill zoom image`[→P. 185], and `/tikz/fill tile image`[→P. 187].

```
\begin{tikzpicture}
\path[fill image options={width=1cm},
  fill tile image=pink_marble.png]
  (2.75,-0.75) -- (3,0) -- (2.75,0.75)
  \foreach \w in {45,90,...,315}
    { -- (\w:1.5cm) } -- cycle;
\end{tikzpicture}
```
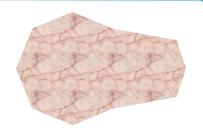

Image blending example

```
\begin{tikzpicture}[every node/.style=
  {circle,minimum width=2cm}]
\node[fill stretch image=blueshade.png]
  (A) at (120:3cm) {A};
\node[fill stretch image=goldshade.png]
  (B) at (60:3cm) {B};
\node[
  preaction={fill stretch image=blueshade.png},
  fill stretch image=goldshade.png,
  fill image opacity=0.5] (C) {C};
\path (A) -- node{$+$} (B);
\draw[->,very thick] (A)--(C);
\draw[->,very thick] (B)--(C);
\end{tikzpicture}
```

9 Libraries `LIB` listings, `LIB` listingsutf8, and `LIB` minted

9.1 Loading the Libraries

In contrast to other `tcolorbox` libraries, the libraries `LIB` listings, `LIB` listingsutf8, and `LIB` minted are concurrent in the sense that they all do the same thing, i. e. displaying listings with or without typesetting the listing in LATEX parallel. The difference is the underlying LATEX package which does the core job for displaying a listing. So, typically, you need just *one* of these libraries. If you do not have a clue, which one of them you should use, you should take `LIB` listingsutf8.

> The order in which the libraries are included influences the default settings and the `/tcb/reset`→P. 74 behavior. The settings of a later loaded library overwrite the settings of a previous loaded library. A library is never loaded twice.

9.1.1 Loading `LIB` listings

This library uses the package `listings` [6] to typeset listings. It is loaded by a package option or inside the preamble by:

```
\tcbuselibrary{listings}
```

This also loads the package `listings` [6].

The `/tcb/listing engine`→P. 202 is set to `listings` by the library. To reactivate this setting, if overwritten by other libraries, use

```
\tcbset{listing engine=listings}
```

9.1.2 Loading `LIB` listingsutf8

To extend `listings` for UTF-8 encoded sources, you can use the support from the package `listingsutf8` [9] by loading the library variant `LIB` listingsutf8.

```
\tcbuselibrary{listingsutf8}
\tcbset{listing utf8=latin1}% optional; 'latin1' is the default.
```

This also loads the library `LIB` listings and the packages `listings` [6] and `listingsutf8` [9].

The `/tcb/listing engine`→P. 202 is set to `listings` by the library. To reactivate this setting, if overwritten by other libraries, use

```
\tcbset{listing engine=listings}
```

9.1.3 Loading ⃞LIB minted

This library uses the package `minted` [13] to typeset listings. It is loaded by a package option or inside the preamble by:

```
\tcbuselibrary{minted}
```

This also loads the package `minted` [13].

> The `minted` package uses the external tool `Pygments` [11] to apply syntax highlighting. It has to be installed and set up, before the library can be used, see [13] and [11]. The `tcolorbox` library ⃞LIB minted does not work, if the package `minted` [13] does not work.

The `/tcb/listing engine`[→P. 202] is set to `minted` by the library. To reactivate this setting, if overwritten by other libraries, use

```
\tcbset{listing engine=minted}
```

9.2 Common Macros of the Libraries

\begin{`tcblisting`}{⟨*options*⟩}
 ⟨*environment content*⟩
\end{`tcblisting`}

Creates a colored box based on a `tcolorbox`[→P. 9]. Controlled by the given ⟨*options*⟩, the environment content is typeset normally and/or as a listing. Furthermore, the ⟨*options*⟩ control appearance and functions of the `tcolorbox`. By default, the listing is interpreted as a LaTeX listing.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black}
This is a \LaTeX\ example which displays the text as source code
and in compiled form.
\end{tcblisting}
```

```
This is a \LaTeX\ example which displays the text as source code
and in compiled form.
```

>   Apache Ant build file (http://ant.apache.org/)
>   **</description>**
> **</project>**

```
% This box is as wide as needed (listing only !!)
% \usetikzlibrary{skins}
\begin{tcblisting}{colback=green!5!white,colframe=green!50!black,listing only,
  hbox,enhanced,drop fuzzy shadow,before=\begin{center},after=\end{center}}
\begin{tikzpicture}
\fill[red] (0,0) rectangle (1,1);
\end{tikzpicture}
\end{tcblisting}
```

> **\begin**{tikzpicture}
> **\fill**[red] (0,0) rectangle (1,1);
> **\end**{tikzpicture}

\begin{**tcboutputlisting**}
 ⟨*environment content*⟩
\end{**tcboutputlisting**}

Saves the environment content to a file which is named by the key value of `listing file`. Later, this file can be loaded by \tcbinputlisting or \tcbuselistingtext or \tcbuselistinglisting.

```
\begin{tcboutputlisting}
This \textbf{text} is written to a standardized file for later usage.
\end{tcboutputlisting}
```

\tcbinputlisting{⟨*options*⟩}

Creates a colored boxed based on a `tcolorbox`. The text content is read from a file named by the key value of `listing file`. Apart from that, the function is equal to that of tcblisting[→ P. 191].

```
\tcbinputlisting{colback=red!5!white,colframe=red!75!black,text only}
\tcbinputlisting{colback=green!5,colframe=green!75!black,listing only}
```

```
\begin{tikzpicture}
\fill[red] (0,0) rectangle (1,1);
\end{tikzpicture}
```

\tcbuselistingtext

Loads text from a file named by the key value of `listing file`.

```
\tcbuselistingtext
```

\tcbuselistinglisting

Typesets text as listing from a file named by the key value of `listing file`.

```
\tcbuselistinglisting

\begin{tikzpicture}
\fill[red] (0,0) rectangle (1,1);
\end{tikzpicture}
```

\tcbusetemplisting

Typesets text as listing from a temporary file which was written by tcbwritetemp[→ P. 80].

> See Section 14.4 on page 288 and Section 14.5 on page 290 for more elaborate methods to create new environments and commands.

> If a new sort of `tcblisting` environments should be created with one optional argument only, one is highly recommended to use `\DeclareTCBListing`[→P. 288] or `\NewTCBListing`[→P. 288] instead of `\newtcblisting` to avoid content scanning problems.

`\newtcblisting[`⟨*init options*⟩**`]{`**⟨*name*⟩**`}[`**⟨*number*⟩**`][`**⟨*default*⟩**`]{`**⟨*options*⟩**`}`**

Creates a new environment ⟨*name*⟩ based on `tcblisting`[→P. 191]. Basically, `\newtcblisting` operates like `\newenvironment`. This means, the new environment ⟨*name*⟩ optionally takes ⟨*number*⟩ arguments, where ⟨*default*⟩ is the default value for the optional first argument. The ⟨*options*⟩ are given to the underlying `tcblisting`. Note that `/tcb/savedelimiter`[→P. 18] is set to the given ⟨*name*⟩ automatically. The ⟨*init options*⟩ allow setting up automatic numbering, see Section 4 from page 75.

```
\newtcblisting{mybox}{%
  colback=red!5!white,
  colframe=red!75!black}

\begin{mybox}
This is my \LaTeX\ box.
\end{mybox}
```

> This is my **\LaTeX** box.
> ------------------------------
> This is my LaTeX box.

```
\newtcblisting{mybox}[1]{%
  colback=red!5!white,
  colframe=red!75!black,
  fonttitle=\bfseries,
  title=#1}

\begin{mybox}{Listing Box}
This is my \LaTeX\ box.
\end{mybox}
```

> **Listing Box**
> This is my **\LaTeX** box.
> ------------------------------
> This is my LaTeX box.

```
\newtcblisting{mybox}[2][]{%
  colback=red!5!white,
  colframe=red!75!black,
  fonttitle=\bfseries,
  title=#2,#1}

\begin{mybox}[listing only]
  {Listing Box}
This is my \LaTeX\ box.
\end{mybox}
\bigskip

\begin{mybox}[listing side text]
  {Listing Box}
This is my
\LaTeX\ box.
\end{mybox}
```

> **Listing Box**
> This is my **\LaTeX** box.

> This is my **\LaTeX** box. | This is my LaTeX box.

Definition in the preamble:

```
\newtcblisting[auto counter]{mycbox}[1]{%
  colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries,
  title=Listing \thetcbcounter: #1}
```

```
\begin{mycbox}{Listing Box}
This is my \LaTeX\ box.
\end{mycbox}
```

Listing 1: Listing Box

This is my \LaTeX\ box.

- - - - - - - - - - - - - - - - - - - -

This is my L^AT_EX box.

\renewtcblisting[⟨*init options*⟩]{⟨*name*⟩}[⟨*number*⟩][⟨*default*⟩]{⟨*options*⟩}

Operates like \newtcblisting^{→P.194}, but based on \renewenvironment instead of \newenvironment. An existing environment is redefined.

`\newtcbinputlisting``[`⟨*init options*⟩`]{\`⟨*name*⟩`}[`⟨*number*⟩`][`⟨*default*⟩`]{`⟨*options*⟩`}`

Creates a new macro `\`⟨*name*⟩ based on `\tcbinputlisting`[→ P. 193]. Basically, `\newtcbinputlisting` operates like `\newcommand`. The new macro `\`⟨*name*⟩ optionally takes ⟨*number*⟩ arguments, where ⟨*default*⟩ is the default value for the optional first argument. The ⟨*options*⟩ are given to the underlying `tcbinputlisting`. The ⟨*init options*⟩ allow setting up automatic numbering, see Section 4 from page 75.

```
\newtcbinputlisting[use counter from=mycbox]{\mylisting}[2][]{%
  listing file={#2},
  title=Listing (\thetcbcounter) of \texttt{#2},
  colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries,
  listing only,breakable,#1}

\mylisting[before upper=\textit{This is the included file content:}]
          {\jobname.tcbtemp}
```

> **Listing (2) of tcolorbox.tcbtemp**
>
> *This is the included file content:*
> ```
> \newtcbinputlisting[use counter from=mycbox]{\mylisting}[2][]{%
>   listing file={#2},

>   listing only,breakable,#1}
>
> \mylisting[before upper=\textit{This is the included file content:}]
>           {\jobname.tcbtemp}
> ```

```
\newtcbinputlisting[use counter from=mycbox]{\mylisting}[2][]{%
  listing engine=minted,minted language=latex,minted style=colorful,
  listing file={#2},
  title=Listing (\thetcbcounter) of \texttt{#2},
  colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries,
  listing only,breakable,#1}

\mylisting[before upper=\textit{This is the included file content:}]
          {\jobname.tcbtemp}
```

> **Listing (3) of tcolorbox.tcbtemp**
>
> *This is the included file content:*
> ```
> \newtcbinputlisting[use counter from=mycbox]{\mylisting}[2][]{%
>   listing engine=minted,minted language=latex,minted style=colorful,
>   listing file={#2},
>   title=Listing (\thetcbcounter) of \texttt{#2},
>   colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries,
>   listing only,breakable,#1}
>
> \mylisting[before upper=\textit{This is the included file content:}]
>           {\jobname.tcbtemp}
> ```

`\renewtcbinputlisting``[`⟨*init options*⟩`]{\`⟨*name*⟩`}[`⟨*number*⟩`][`⟨*default*⟩`]{`⟨*options*⟩`}`

Operates like `\newtcbinputlisting`, but based on `\renewcommand` instead of `\newcommand`. An existing macro is redefined.

9.3 Option Keys of the 📗 listings Library

/tcb/listing options=⟨*key list*⟩   (no default, initially `style=tcblatex`)

Sets the options from the package `listings` [6] which are used during typesetting of the listing. For LaTeX listings, there is a predefined `listings` style named `tcblatex` which can be used.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!25,left=6mm,
listing options={style=tcblatex,numbers=left,numberstyle=\tiny\color{red!75!black}}}
This is a \LaTeX\ example which displays the text as source code
and in compiled form. Additionally, we use line numbers here.
\end{tcblisting}
```

```
1  This is a \LaTeX\ example which displays the text as source code
2  and in compiled form. Additionally, we use line numbers here.
```

This is a LaTeX example which displays the text as source code and in compiled form. Additionally, we use line numbers here.

/tcb/no listing options   (no value, initially unset)

Abbreviation for `listing options={}`. This removes all options for the `listings` package. This includes the `tcblisting` standard style `tcblatex` and the encoding presets. Use this option, if you want to set the `listings` options outside of `tcblisting`, e.g. globally in the preamble.

```
\begin{tcblisting}{no listing options}
All \textit{listings} options removed.
\end{tcblisting}
```

```
All \textit{listings} options removed.
```

All *listings* options removed.

/tcb/listing style=⟨*style*⟩   (no default, initially `tcblatex`)

Abbreviation for `listing options={style=...}`. This key sets a ⟨*style*⟩ for the `listings` package, see [6]. For LaTeX, there is a predefined style named `tcblatex`.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,
listing style=tcblatex}
Here, we use the predefined style.
\end{tcblisting}
```

```
Here, we use the predefined style.
```

Here, we use the predefined style.

`/tcb/listing inputencoding`=⟨*encoding*⟩ (no default, initially `\inputencodingname`)
Sets the input encoding value for the predefined listing style `tcblatex` and `tcbdocumentation` from the library 〚LIB〛 documentation. The initial value is derived from the package `inputenc` if used.

`/tcb/listing remove caption`=`true|false` (default `true`, initially `true`)
If set to `true`, some part of the caption building code of the `listings` package is silenced to prevent some unwanted interaction with the `hyperref` package resulting in additional vertical space. If set to `false`, the `listings` package code is kept unchanged. Note that listings outside `tcblisting`[→P.191] and `\tcbinputlisting`[→P.193] are always processed normally. Typically, a user is not expected to use this key at all.

`/tcb/every listing line`=⟨*text*⟩ (no default, initially unset/empty)
Inserts some ⟨*text*⟩ to the begin of every line of a listing. Note that this a hack of the `listings` package code. This may become unusable or superfluous in the future.

```
\newtcblisting{commandshell}{colback=black,colupper=white,colframe=yellow!75!black,
  listing only,listing options={style=tcblatex,language=sh},
  every listing line={\textcolor{red}{\small\ttfamily\bfseries root \$> }}}

\begin{commandshell}
ls -al
cd /usr/lib
\end{commandshell}
```

```
root $> ls -al
root $> cd /usr/lib
```

`/tcb/every listing line*`=⟨*text*⟩ (no default, initially unset/empty)
Identical to `/tcb/every listing line` plus additional enlargement of `/tcb/rightupper`[→P.26] by the width of ⟨*text*⟩. Therefore, this option has to be used after the geometry settings are done. This option is intended to be used in conjunction with `/tcb/hbox`[→P.69].

```
\newtcblisting{commandshell}{colback=black,colupper=white,colframe=yellow!75!black,
  listing only,listing options={style=tcblatex,language=sh},hbox,
  every listing line*={\textcolor{red}{\small\ttfamily\bfseries root \$> }}}

\begin{commandshell}
ls -al
cd /usr/lib
\end{commandshell}
```

```
root $> ls -al
root $> cd /usr/lib
```

See further options in Section 9.6 on page 202.

For an combined example of using `\lstinline` inside a tcolorbox, see `\DeclareTotalTCBox`[→P.286].

9.4 Option Keys of the [LIB] listingsutf8 Library

The [LIB] listingsutf8 library is an extension of the [LIB] listings library, so all options from Section 9.3 on page 197 are applicable.

/tcb/listing utf8=⟨*one-byte-encoding*⟩   (style, no default, initially `latin1`)
    Abbreviation for using **/tcb/listing inputencoding**^{→ P. 198} together with UTF-8 support
    from the package `listingsutf8` [9]. This option is available only for the library variant
    [LIB] listingsutf8. The ⟨*one-byte-encoding*⟩ is one of the applicable encodings from [9], e. g.
    `latin1`.

See further options in Section 9.6 on page 202.

9.5 Option Keys of the ⓁⓘⒷ minted Library

/tcb/minted language=⟨*programming language*⟩   (no default, initially `latex`)

Sets a ⟨*programming language*⟩ known to `Pygments` [11].

```
\begin{tcblisting}{listing engine=minted,minted style=trac,
  minted language=java,
  colback=red!5!white,colframe=red!75!black,listing only}
public class HelloWorld {
  // A 'Hello World' in Java
  public static void main(String[] args) {
    System.out.println("Hello World!");
  }
}
\end{tcblisting}
```

```
  public class HelloWorld {
    // A 'Hello World' in Java
    public static void main(String[] args) {
      System.out.println("Hello World!");
    }
  }
```

/tcb/minted options=⟨*key list*⟩   (no default, initially `tabsize=2,fontsize=\small`)

Sets the options from the package `minted` [13] which are used during typesetting of the listing.

```
% \tcbuselibrary{skins}
\newtcblisting{myjava}{listing engine=minted,minted style=colorful,
  minted language=java,minted options={fontsize=\small,linenos,numbersep=3mm},
  colback=blue!5!white,colframe=blue!75!black,listing only,
  left=5mm,enhanced,
  overlay={\begin{tcbclipinterior}\fill[red!20!blue!20!white] (frame.south west)
    rectangle ([xshift=5mm]frame.north west);\end{tcbclipinterior}}}

\begin{myjava}
public class HelloWorld {
  // A 'Hello World' in Java
  public static void main(String[] args) {
    System.out.println("Hello World!");
  }
}
\end{myjava}
```

```
1  public class HelloWorld {
2    // A 'Hello World' in Java
3    public static void main(String[] args) {
4      System.out.println("Hello World!");
5    }
6  }
```

/tcb/minted style=⟨*style*⟩ (no default, initially unset)

Sets a ⟨*style*⟩ known to `Pygments` [11]. This is independent from `/tcb/minted options`^{→P.200}. Note that styles are always applied globally; all following examples will be set in the given ⟨*style*⟩ until a new style is set. Also note that setting `\usemintedstyle{`⟨*style*⟩`}` only once per document is more economic, if all styles in a document are the same. For examples of different styles, see `/tcb/minted language`^{→P.200} and `/tcb/minted options`^{→P.200}.

See further options in Section 9.6 on the following page.

9.6 Common Option Keys of all Libraries

For the ⟨*options*⟩ in `tcblisting`^{→P.191} respectively `\tcbinputlisting`^{→P.193} the following `pgf` keys can be applied. The key tree path `/tcb/` is not to be used inside these macros.

/tcb/listing engine=⟨*engine*⟩ (no default)

> Sets the ⟨*engine*⟩ which typesets the listings. Feasible values are
> - **listings**, if library ᴸᴵᴮ listings or ᴸᴵᴮ listingsutf8 is loaded.
> - **minted**, if library ᴸᴵᴮ minted is loaded.

/tcb/listing file=⟨*file name*⟩ (no default, initially `\jobname.listing`)

> Sets the ⟨*file name*⟩ of the file which is used to save listings.

/tcb/listing and text (no value, initially set)

> Typesets the environment content as listing in the upper part and as compiled text in the lower part.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,listing and text}
This is a \LaTeX\ example.
\end{tcblisting}
```

> This is a **LaTeX**\ example.
> --
> This is a LATEX example.

/tcb/text and listing (no value)

> Typesets the environment content as compiled text in the upper part and as listing in the lower part.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,text and listing}
This is a \LaTeX\ example.
\end{tcblisting}
```

> This is a LATEX example.
> --
> This is a **LaTeX**\ example.

/tcb/listing only (no value)

> Typesets the environment content as listing.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,listing only}
This is a \LaTeX\ example.
\end{tcblisting}
```

> This is a **LaTeX**\ example.

/tcb/text only (no value)

Typesets the environment content as compiled text.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,text only}
This is a \LaTeX\ example.
\end{tcblisting}
```

This is a LᴬTᴇX example.

/tcb/comment=⟨*text*⟩ (no default, initially empty)

Records a comment with ⟨*text*⟩ as content. The comment is displayed e.g. in conjunction with /tcb/listing and comment^{→P. 204} and /tcb/comment and listing^{→P. 204}.

```
\begin{tcblisting}{comment={This comment is really only a comment},
  colback=red!5!white,colframe=red!75!black}
This is a \textbf{tcolorbox}.
\end{tcblisting}
```

This is a \textbf{tcolorbox}.

- -

This is a **tcolorbox**.

/tcb/image comment={⟨*options*⟩}{⟨*filename*⟩} (style, no default, initially unset)

Uses an image denoted by ⟨*filename*⟩ as *comment* for the listing. The image is included by the standard \includegraphics macro with given ⟨*options*⟩.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,listing side comment,
  image comment={width=2.5cm}{example-image-a.pdf},center lower}
This is a \LaTeX\ example.
\end{tcblisting}
```

This is a **LaTeX**\ example.

A

203

/tcb/listing and comment (no value)

Typesets the environment content as listing in the upper part and a given comment in the lower part.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,listing and comment,
  comment={This is my comment. It may contain line breaks.\par
    It can even use the environment content
    \flqq\ignorespaces\tcbuselistingtext\unskip\frqq}}
This is a \LaTeX\ example.
\end{tcblisting}
```

> This is a **\LaTeX** example.
> ---
> This is my comment. It may contain line breaks.
> It can even use the environment content «This is a LaTeX example.»

/tcb/comment and listing (no value)

Typesets a given comment in the upper part and the environment content as listing in the lower part.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,comment and listing,
comment={This is my comment.}}
This is a \LaTeX\ example.
\end{tcblisting}
```

> This is my comment.
> ---
> This is a **\LaTeX** example.

/tcb/listing side text (no value)

Typesets the environment content side by side as listing in the left (upper) part and as compiled text in the right (lower) part.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,listing side text}
This is a \LaTeX\ example.
\end{tcblisting}
```

This is a **\LaTeX** example.   This is a LATEX example.

/tcb/text side listing (no value)

Typesets the environment content side by side as compiled text in the left (upper) part and as listing in the right (lower) part.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,text side listing}
This is a \LaTeX\ example.
\end{tcblisting}
```

This is a LATEX example.   This is a **\LaTeX** example.

/tcb/listing outside text (no value)

Typesets the environment content side by side as listing in a `tcolorbox` and as compiled text outside the box in the right part of the page. Nevertheless, the outside text is treated as *lower* part of the `tcolorbox` and can be formatted with all lower part options. The space partitioning is done with the side by side options from Section 3.10, see page 56.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,listing outside text}
This is a \LaTeX\ example.
\end{tcblisting}
```

This is a **\LaTeX** example.   This is a LATEX example.

/tcb/text outside listing (no value)

Typesets the environment content side by side as listing in a `tcolorbox` and as compiled text outside the box in the left part of the page. Nevertheless, the outside text is treated as *lower* part of the `tcolorbox` and can be formatted with all lower part options. The space partitioning is done with the side by side options from Section 3.10, see page 56.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,text outside listing}
This is a \LaTeX\ example.
\end{tcblisting}
```

This is a LATEX example.   This is a **\LaTeX** example.

/tcb/listing side comment (no value)

Typesets the environment content side by side as listing in the left (upper) part and a given comment in the right (lower) part.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,listing side comment,
  righthand width=1.5cm,image comment={width=1.5cm}{example-image-a.pdf}}
This is a \LaTeX\ example.
\end{tcblisting}
```

This is a **\LaTeX** example.   A

/tcb/comment side listing (no value)

Typesets the environment content side by side with a given comment in the left (upper) part and as listing in the right (lower) part.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,comment side listing,
  lefthand width=1.5cm,image comment={width=1.5cm}{example-image-a.pdf}}
This is a \LaTeX\ example.
\end{tcblisting}
```

A   This is a **\LaTeX** example.

/tcb/listing outside comment (no value)

Typesets the environment content side by side as listing in a `tcolorbox` and a given comment outside the box in the right part of the page. Nevertheless, the outside text is treated as *lower* part of the `tcolorbox` and can be formatted with all lower part options. The space partitioning is done with the side by side options from Section 3.10, see page 56.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,listing outside comment,
  righthand width=1.5cm,image comment={width=1.5cm}{example-image-a.pdf}}
This is a \LaTeX\ example.
\end{tcblisting}
```

This is a **\LaTeX** example.   A

/tcb/comment outside listing (no value)

Typesets the environment content side by side as listing in a `tcolorbox` and a given comment outside the box in the left part of the page. Nevertheless, the outside text is treated as *lower* part of the `tcolorbox` and can be formatted with all lower part options. The space partitioning is done with the side by side options from Section 3.10, see page 56.

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,comment outside listing,
  lefthand width=1.5cm,image comment={width=1.5cm}{example-image-a.pdf}}
This is a \LaTeX\ example.
\end{tcblisting}
```

A   This is a **\LaTeX** example.

`/tcb/listing above text` (no value)

Typesets the environment content as listing in a `tcolorbox` and as compiled text outside and below the box. The outside text is treated as *lower* part of the `tcolorbox` and can be formatted with all lower part options. The distance between box and text is controlled by `/tcb/middle`[→P. 28].

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,listing above text}
This is a \LaTeX\ example.
\end{tcblisting}
```

    This is a **\LaTeX** example.

This is a LaTeX example.

`/tcb/text above listing` (no value)

Typesets the environment content as listing in a `tcolorbox` and as compiled text outside and above the box. The outside text is treated as *lower* part of the `tcolorbox` and can be formatted with all lower part options. The distance between box and text is controlled by `/tcb/middle`[→P. 28].

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,text above listing}
This is a \LaTeX\ example.
\end{tcblisting}
```

This is a LaTeX example.

    This is a **\LaTeX** example.

/tcb/listing above comment (no value)

Typesets the environment content as listing in a `tcolorbox` and a given comment outside and below the box. The outside text is treated as *lower* part of the `tcolorbox` and can be formatted with all lower part options. The distance between box and comment is controlled by `/tcb/middle`[→ P. 28].

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,listing above comment,
  center lower,image comment={width=3cm}{example-image-a.pdf}}
This is a \LaTeX\ example.
\end{tcblisting}
```

This is a **\LaTeX** example.

A

/tcb/comment above listing (no value)

Typesets the environment content as listing in a `tcolorbox` and a given comment outside and above the box. The outside text is treated as *lower* part of the `tcolorbox` and can be formatted with all lower part options. The distance between box and comment is controlled by `/tcb/middle`[→ P. 28].

```
\begin{tcblisting}{colback=red!5!white,colframe=red!75!black,comment above listing,
  center lower,image comment={width=3cm}{example-image-a.pdf}}
This is a \LaTeX\ example.
\end{tcblisting}
```

A

This is a **\LaTeX** example.

9.7 Creation of LaTeX Tutorials

The following source code gives a guideline for the creation of LaTeX tutorials. In the next section, a framework for LaTeX exercises is described. All examples shall be numbered optionally.

Firstly, some additional `tcb` keys are defined for the appearance. For the examples, three environments `texexp`, `texexptitled`, and `texexptitledspec` are defined with automatic numbering.

- `texexp` is used for untitled examles,

- `texexptitled` is used for titled examles,

- `texexptitledspec` is used for titled examles with special treatment.

Definition in the preamble:

```
\tcbset{
  texexp/.style={colframe=red!50!yellow!50!black, colback=red!50!yellow!5!white,
      coltitle=red!50!yellow!3!white,
      fonttitle=\small\sffamily\bfseries, fontupper=\small, fontlower=\small},
  example/.style 2 args={texexp,
      title={Example \thetcbcounter: #1},label={#2}},
}

\newtcblisting{texexp}[1]{texexp,#1}
\newtcblisting[auto counter,number within=section]{texexptitled}[3][]{%
  example={#2}{#3},#1}
\newtcolorbox[use counter from=texexptitled]{texexptitledspec}[3][]{%
  example={#2}{#3},#1}
```

```
\begin{tcblisting}{texexp}
This is a \LaTeX\ example which displays the text as source code
and in compiled form.
\end{tcblisting}
```

> This is a \LaTeX\ example which displays the text as source code
> and in compiled form.
> -
> This is a LaTeX example which displays the text as source code and in compiled form.

```
\begin{texexptitled}{First example with a title line}{firstExample}
Here, we use Example \ref{firstExample} with a title line.
\end{texexptitled}
```

> **Example 9.1: First example with a title line**
>
> Here, we use Example \ref{firstExample} with a title line.
> -
> Here, we use Example 9.1 with a title line.

```
\begin{texexp}{}
This is a \LaTeX\ example which displays the text as source code
and in compiled form.
\end{texexp}
```

```
This is a \LaTeX\ example which displays the text as source code
and in compiled form.
```
This is a LaTeX example which displays the text as source code and in compiled form.

```
\begin{texexp}{text and listing}
This is a \LaTeX\ example which displays the text as source code
and in compiled form.
\end{texexp}
```

This is a LaTeX example which displays the text as source code and in compiled form.

```
This is a \LaTeX\ example which displays the text as source code
and in compiled form.
```

```
\begin{texexp}{listing only}
This is a \LaTeX\ example which displays the text as source code only.
\end{texexp}
```

```
This is a \LaTeX\ example which displays the text as source code only.
```

```
\begin{texexp}{text only}
This is a \LaTeX\ example which displays the text in compiled form only.
\end{texexp}
```

This is a LaTeX example which displays the text in compiled form only.

```
\begin{texexptitled}{An Example with a Heading}{heading1}
This is a \LaTeX\ example with a numbered heading line
which can be referred to.
\end{texexptitled}
Here, we see Example \ref{heading1}.
```

> **Example 9.2: An Example with a Heading**
>
> ```
> This is a \LaTeX\ example with a numbered heading line
> which can be referred to.
> ```
> -
> This is a LATEX example with a numbered heading line which can be referred to.

Here, we see Example 9.2.

```
\begin{texexptitled}[listing only]{Another Example with a Heading}{heading2}
The keys can be used in combination. Here, an example with a heading line
and source code only is given.
\end{texexptitled}
Here, we see Example \ref{heading2}.
```

> **Example 9.3: Another Example with a Heading**
>
> ```
> The keys can be used in combination. Here, an example with a heading line
> and source code only is given.
> ```

Here, we see Example 9.3.

```
\begin{texexptitled}[float]{A floating Example with a Heading}{heading3}
This is another \LaTeX\ example with numbered heading line.
But now, the box is a floating object.
\end{texexptitled}
```

> **Example 9.4: A floating Example with a Heading**
>
> ```
> This is another \LaTeX\ example with numbered heading line.
> But now, the box is a floating object.
> ```
> -
> This is another LATEX example with numbered heading line. But now, the box is a floating object.

```
The floating box of the last example is seen as Example \ref{heading3}
on page \pageref{heading3}.
```

The floating box of the last example is seen as Example 9.4 on page 211.

```
\begin{texexptitledspec}{Special application}{texexpbox1}
\begin{lstlisting}[style=tcblatex]
Some \LaTeX\ source code.
\end{lstlisting}
\tcblower
For special cases, the environment |texexptitledspec| with style
|example| can be used directly. As one can see, the upper and the lower
part of the box can be used uncoupled also.
\end{texexptitledspec}
```

Example 9.5: Special application

```
Some \LaTeX\ source code.
```

For special cases, the environment `texexptitledspec` with style `example` can be used directly. As one can see, the upper and the lower part of the box can be used uncoupled also.

The following series of examples demonstrate the application of `tcolorbox`[→P. 9] options for diversification.

```
\begin{texexptitled}{How to use options (1):\par The basic example}{options1}
\begin{tikzpicture}
\path[fill=yellow!50!white] (0,0) circle (11mm);
\path[fill=white] (0,0) circle (9mm);
\foreach \w/\c in {90/red,210/green,330/blue}
{\path[shading=ball,ball color=\c] (\w:1cm) circle (7mm);}
\end{tikzpicture}
\end{texexptitled}
```

Example 9.6: How to use options (1):
The basic example

```
\begin{tikzpicture}
\path[fill=yellow!50!white] (0,0) circle (11mm);
\path[fill=white] (0,0) circle (9mm);
\foreach \w/\c in {90/red,210/green,330/blue}
{\path[shading=ball,ball color=\c] (\w:1cm) circle (7mm);}
\end{tikzpicture}
```

```
\begin{texexptitled}[center lower,enhanced,segmentation hidden,middle=0mm]
  {How to use options (2):\par The text output is centered and the
    segmentation line has vanished.}{options2}
\begin{tikzpicture}
\path[fill=yellow!50!white] (0,0) circle (11mm);
\path[fill=white] (0,0) circle (9mm);
\foreach \w/\c in {90/red,210/green,330/blue}
{\path[shading=ball,ball color=\c] (\w:1cm) circle (7mm);}
\end{tikzpicture}
\end{texexptitled}
```

Example 9.7: How to use options (2):
The text output is centered and the segmentation line has vanished.

```
\begin{tikzpicture}
\path[fill=yellow!50!white] (0,0) circle (11mm);
\path[fill=white] (0,0) circle (9mm);
\foreach \w/\c in {90/red,210/green,330/blue}
{\path[shading=ball,ball color=\c] (\w:1cm) circle (7mm);}
\end{tikzpicture}
```

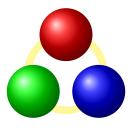

```
\begin{texexptitled}[tikz lower,bicolor,colbacklower=white]
  {How to use options (3):\par Here, the |tikzpicture| is totally hidden.
    The |bicolor| skin highlights the output.}{options3}
\path[fill=yellow!50!white] (0,0) circle (11mm);
\path[fill=white] (0,0) circle (9mm);
\foreach \w/\c in {90/red,210/green,330/blue}
{\path[shading=ball,ball color=\c] (\w:1cm) circle (7mm);}
\end{texexptitled}
```

Example 9.8: How to use options (3):
Here, the `tikzpicture` is totally hidden. The `bicolor` skin highlights the output.
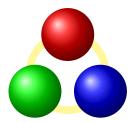

```
\path[fill=yellow!50!white] (0,0) circle (11mm);
\path[fill=white] (0,0) circle (9mm);
\foreach \w/\c in {90/red,210/green,330/blue}
{\path[shading=ball,ball color=\c] (\w:1cm) circle (7mm);}
```

```
\begin{texexptitled}[center lower,listing side text,righthand width=3.5cm,
  bicolor,colbacklower=white]
  {How to use options (4):\par The |bicolor| skin also works with side
   by side mode}{options4}
\begin{tikzpicture}
\path[fill=yellow!50!white] (0,0) circle (11mm);
\path[fill=white] (0,0) circle (9mm);
\foreach \w/\c in {90/red,210/green,330/blue}
{\path[shading=ball,ball color=\c]
    (\w:1cm) circle (7mm);}
\end{tikzpicture}
\end{texexptitled}
```

Example 9.9: How to use options (4):
The `bicolor` skin also works with side by side mode

```
\begin{tikzpicture}
\path[fill=yellow!50!white] (0,0) circle (11mm);
\path[fill=white] (0,0) circle (9mm);
\foreach \w/\c in {90/red,210/green,330/blue}
{\path[shading=ball,ball color=\c]
    (\w:1cm) circle (7mm);}
\end{tikzpicture}
```
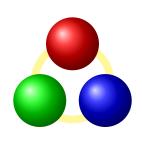

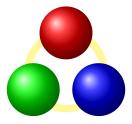

```
\begin{texexptitled}[center lower,listing outside text,righthand width=3.5cm]
  {How to use options (5):\par Putting our picture outside is just
   a matter of one word.}{options5}
\begin{tikzpicture}
\path[fill=yellow!50!white] (0,0) circle (11mm);
\path[fill=white] (0,0) circle (9mm);
\foreach \w/\c in {90/red,210/green,330/blue}
{\path[shading=ball,ball color=\c]
    (\w:1cm) circle (7mm);}
\end{tikzpicture}
\end{texexptitled}
```

Example 9.10: How to use options (5):
Putting our picture outside is just a matter of one word.

```
\begin{tikzpicture}
\path[fill=yellow!50!white] (0,0) circle (11mm);
\path[fill=white] (0,0) circle (9mm);
\foreach \w/\c in {90/red,210/green,330/blue}
{\path[shading=ball,ball color=\c]
    (\w:1cm) circle (7mm);}
\end{tikzpicture}
```
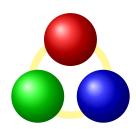

```
\begin{texexptitled}[center lower,text above listing]
  {How to use options (6):\par The picture may also be put above
    the listing box.}{options6}
\begin{tikzpicture}
\path[fill=yellow!50!white] (0,0) circle (11mm);
\path[fill=white] (0,0) circle (9mm);
\foreach \w/\c in {90/red,210/green,330/blue}
{\path[shading=ball,ball color=\c]
    (\w:1cm) circle (7mm);}
\end{tikzpicture}
\end{texexptitled}
```

Example 9.11: How to use options (6):
The picture may also be put above the listing box.

```
\begin{tikzpicture}
\path[fill=yellow!50!white] (0,0) circle (11mm);
\path[fill=white] (0,0) circle (9mm);
\foreach \w/\c in {90/red,210/green,330/blue}
{\path[shading=ball,ball color=\c]
    (\w:1cm) circle (7mm);}
\end{tikzpicture}
```

```
\begin{texexptitled}[beamer,center lower,text outside listing,lefthand width=3.5cm]
  {How to use options (7):\par Our style is easily transformed into
    a beamerish one.}{options7}
\begin{tikzpicture}
\path[fill=yellow!50!white] (0,0) circle (11mm);
\path[fill=white] (0,0) circle (9mm);
\foreach \w/\c in {90/red,210/green,330/blue}
{\path[shading=ball,ball color=\c]
    (\w:1cm) circle (7mm);}
\end{tikzpicture}
\end{texexptitled}
```

Example 9.12: How to use options (7):
Our style is easily transformed into a beamerish one.

```
\begin{tikzpicture}
\path[fill=yellow!50!white] (0,0) circle (11mm);
\path[fill=white] (0,0) circle (9mm);
\foreach \w/\c in {90/red,210/green,330/blue}
{\path[shading=ball,ball color=\c]
    (\w:1cm) circle (7mm);}
\end{tikzpicture}
```

9.8 Creation of LaTeX Exercises

In the following, a guideline is given for the creation of LaTeX exercises with solutions. These solutions are saved to disk for application at a place of choice. Therefore, all used exercises are logged to a file `\jobname.sol` for automatic processing. The solution contents themselves are saved to a subdirectory named `solutions`.

```
%\newcounter{texercise}  % preamble

\newwrite\solout
\def\openoutsol{\immediate\openout\solout\jobname.sol}
\def\solfile#1{solutions/texercise#1.tex}
\def\writesol#1{\immediate\write\solout{\noexpand\processsol{\thetcbcounter}{#1}}}%
\def\closeoutsol{\immediate\closeout\solout}
\def\inputsol{\IfFileExists{\jobname.sol}{\input{\jobname.sol}}{}}
```

- Before the first exercise is given, `\openoutsol` has to be called to start logging.

- The solution is given as content of a `tcboutputlisting`[→P.193] environment. Note, that you can use this content also inside the exercise with `\tcbuselistingtext`[→P.193] in compiled form.

- After the last exercise is given (and before using the solutions), `\closeoutsol` has to be called to stop logging.

- The solutions are loaded by `\inputsol`.

Inside the exercise text, there may be text parts which are needed as LaTeX source code and as compiled text as well. These parts can be saved by `tcbwritetemp`[→P.80] and used in compiled form by `\tcbusetemp`[→P.80] or as source code by `\tcbusetemplisting`[→P.193].

At first, we generate some a common style for the exercises and the solutions. Further, since exercises and solutions should be numbered, we force to use a label ⟨*marker*⟩. Automatically, the label `exe:`⟨*marker*⟩ is used to mark the exercise and the label `sol:`⟨*marker*⟩ is used to mark the solution.

```
\tcbset{texercisestyle/.style={arc=0.5mm, colframe=blue!25!yellow!90!white,
  colback=blue!25!yellow!5!white, coltitle=blue!25!yellow!40!black,
  fonttitle=\small\sffamily\bfseries, fontupper=\small, fontlower=\small}}
```

With these preparations, the kernel environment `texercise` for our exercises is created quickly:

```
Definition in the preamble:
\newtcolorbox[auto counter,number within=section,list inside=exam]%
  {texercise}[2][]{texercisestyle,
  listing file={\solfile\thetcbcounter},label={exe:#2},
  phantom={\writesol{#2}},
  title={Exercise \thetcbcounter\hfill\mdseries Solution on page \pageref{sol:#2}},
  list entry={\protect\numberline{\thetcbcounter}Exercise with solution on
              page \pageref{sol:#2}},#1}
```

```
\newtcolorbox{texercise}[2][]{texercisestyle,
  listing file={\solfile\thetexercise},
  phantom={\refstepcounter{texercise}\label{exe:#2}\writesol{#2}},
  title={Exercise \arabic{texercise}%
    \hfill\mdseries Solution on page \pageref{sol:#2}},#1}
```

The following examples demonstrate the application.

```
\begin{texercise}{tabular_example}
\textit{Create the following table:}\par\smallskip%
\begin{tcboutputlisting}
\begin{tabular}{|p{3cm}|p{3cm}|p{3cm}|p{3cm}|}\hline
\multicolumn{4}{|c|}{\bfseries\itshape Das alte Italien}\\\hline
\multicolumn{2}{|c|}{\bfseries Antike} &
\multicolumn{2}{c|}{\bfseries Mittelalter}\\\hline
\multicolumn{1}{|c|}{\itshape Republik}&
\multicolumn{1}{c|}{\itshape Kaiserreich}&
\multicolumn{1}{c|}{\itshape Franken}&
\multicolumn{1}{c|}{\itshape Teilstaaten}\\\hline
In den Zeiten der r\"{o}mischen Republik standen dem Staat jeweils zwei
Konsuln vor, deren Machtbefugnisse identisch waren. &
Das r\"{o}mische Kaiserreich wurde von einem Alleinherrscher, dem Kaiser,
regiert.
& In der V\"{o}lkerwanderungszeit \"{u}bernahmen die Goten und sp\"{a}ter die
Franken die Vorherrschaft.
& Im sp\"{a}teren Mittelalter regierten F\"{u}rsten einen Fleckenteppich
von Einzelstaaten.\\\hline
\end{tabular}
\end{tcboutputlisting}
\tcbuselistingtext%
\end{texercise}
```

Exercise 9.1   Solution on page 220

Create the following table:

Das alte Italien			
Antike		**Mittelalter**	
Republik	*Kaiserreich*	*Franken*	*Teilstaaten*
In den Zeiten der römischen Republik standen dem Staat jeweils zwei Konsuln vor, deren Machtbefugnisse identisch waren.	Das römische Kaiserreich wurde von einem Alleinherrscher, dem Kaiser, regiert.	In der Völkerwanderungszeit übernahmen die Goten und später die Franken die Vorherrschaft.	Im späteren Mittelalter regierten Fürsten einen Fleckenteppich von Einzelstaaten.

```
\begin{texercise}{macro_oneparam}
\begin{tcboutputlisting}
\newcommand{\headingline}[1]{%
  \begin{center}\Large\bfseries #1\end{center}}
\end{tcboutputlisting}
\tcbuselistingtext%

Create a new macro \verb+\headingline+ which produces the
following output:\par\smallskip
\begin{tcbwritetemp}
\headingline{Very important heading}
\end{tcbwritetemp}
\tcbusetemplisting\tcbusetemp%
\end{texercise}
```

Exercise 9.2   Solution on page 220

Create a new macro \headingline which produces the following output:

\headingline{Very important heading}

Very important heading

```
\begin{texercise}{macro_twoparam}
\begin{tcboutputlisting}
\newcommand{\minitable}[2]{%
  \begin{center}\begin{tabular}{p{10cm}}\hline%
  \multicolumn{1}{c}{\bfseries#1}\\\hline%
  #2\\\hline%
  \end{tabular}\end{center}}
\end{tcboutputlisting}
\tcbuselistingtext%
Create a new macro \verb+\minitable+ which produces the
following output:\par\smallskip
\begin{tcbwritetemp}
\minitable{My heading}{In this tiny tabular, there is only a heading
  and some text below which has a width of ten centimeters.}
\end{tcbwritetemp}
\tcbusetemplisting\par\smallskip\tcbusetemp%
\end{texercise}
```

Exercise 9.3   Solution on page 220

Create a new macro \minitable which produces the following output:

\minitable{My heading}{In this tiny tabular, there is only a heading
  and some text below which has a width of ten centimeters.}

My heading
In this tiny tabular, there is only a heading and some text below which has a width of ten centimeters.

```latex
\begin{texercise}{macro_threeparam}
\begin{tcboutputlisting}
\newcommand{\synop}[3]{%
  \begin{tabular}{@{}p{(\linewidth-\tabcolsep*2-\arrayrulewidth)/2}|%
    p{(\linewidth-\tabcolsep*2-\arrayrulewidth)/2}@{}}\hline
  \multicolumn{2}{c}{\bfseries #1}\\\hline
  \multicolumn{1}{c|}{\itshape English}&
  \multicolumn{1}{c}{\itshape German}\\\hline
  #2 & #3
  \end{tabular}}
\end{tcboutputlisting}
\tcbuselistingtext%
Create a new macro \verb+\synop+ which typesets a synoptic text according
to the following example. Base your macro on a tabular which takes the
total line width.\par\smallskip
\begin{tcbwritetemp}
\synop{Neil Armstrong}%
{That's one small step for a man, one giant leap for mankind.}%
{Das ist ein kleiner Schritt f\"{u}r einen Mann,
   ein riesiger Sprung f\"{u}r die Menschheit.}
\end{tcbwritetemp}
\tcbusetemplisting\par\smallskip\tcbusetemp%
\end{texercise}
```

Exercise 9.4   Solution on page 221

Create a new macro \synop which typesets a synoptic text according to the following
example. Base your macro on a tabular which takes the total line width.

```latex
\synop{Neil Armstrong}%
{That's one small step for a man, one giant leap for mankind.}%
{Das ist ein kleiner Schritt f\"{u}r einen Mann,
   ein riesiger Sprung f\"{u}r die Menschheit.}
```

Neil Armstrong	
English	*German*
That's one small step for a man, one giant leap for mankind.	Das ist ein kleiner Schritt für einen Mann, ein riesiger Sprung für die Menschheit.

Now, we give a list of all exercises with:

```latex
\tcblistof[\subsection]{exam}{List of Exercises%
  \label{listofexercises}}
```

9.9 List of Exercises

9.10 Solutions for the given LaTeX Exercises

For all solutions, a macro `\processsol` was written to the file `\jobname.sol`. Now, we need a definition for this macro to use the solutions.

```latex
% \usepackage{hyperref} % for \phantomsection
\newcommand{\processsol}[2]{%
  \tcbinputlisting{texercisestyle,listing only,
    phantom={\phantomsection\label{sol:#2}},%
    title={Solution for Exercise \ref{exe:#2} on page \pageref{exe:#2}},
    listing file={\solfile{#1}}}}
```

The loading of all solutions is done by:

```latex
\inputsol
```

With this, we get:

Solution for Exercise 9.1 on page 217

```latex
\begin{tabular}{|p{3cm}|p{3cm}|p{3cm}|p{3cm}|}\hline
\multicolumn{4}{|c|}{\bfseries\itshape Das alte Italien}\\\hline
\multicolumn{2}{|c|}{\bfseries Antike} &
\multicolumn{2}{c|}{\bfseries Mittelalter}\\\hline
\multicolumn{1}{|c|}{\itshape Republik}&
\multicolumn{1}{c|}{\itshape Kaiserreich}&
\multicolumn{1}{c|}{\itshape Franken}&
\multicolumn{1}{c|}{\itshape Teilstaaten}\\\hline
In den Zeiten der r\"{o}mischen Republik standen dem Staat jeweils zwei
Konsuln vor, deren Machtbefugnisse identisch waren. &
Das r\"{o}mische Kaiserreich wurde von einem Alleinherrscher, dem Kaiser,
regiert.
& In der V\"{o}lkerwanderungszeit \"{u}bernahmen die Goten und sp\"{a}ter die
Franken die Vorherrschaft.
& Im sp\"{a}teren Mittelalter regierten F\"{u}rsten einen Fleckenteppich
von Einzelstaaten.\\\hline
\end{tabular}
```

Solution for Exercise 9.2 on page 218

```latex
\newcommand{\headingline}[1]{%
  \begin{center}\Large\bfseries #1\end{center}}
```

Solution for Exercise 9.3 on page 218

```latex
\newcommand{\minitable}[2]{%
  \begin{center}\begin{tabular}{p{10cm}}\hline%
  \multicolumn{1}{c}{\bfseries#1}\\\hline%
  #2\\\hline%
  \end{tabular}\end{center}}
```

Solution for Exercise 9.4 on page 219

```
\newcommand{\synop}[3]{%
  \begin{tabular}{@{}p{(\linewidth-\tabcolsep*2-\arrayrulewidth)/2}|%
    p{(\linewidth-\tabcolsep*2-\arrayrulewidth)/2}@{}}\hline
  \multicolumn{2}{c}{\bfseries #1}\\\hline
  \multicolumn{1}{c|}{\itshape English}&
  \multicolumn{1}{c}{\itshape German}\\\hline
  #2 & #3
  \end{tabular}}
```

10   Library ᴸᴵᴮ theorems

The library is loaded by a package option or inside the preamble by:

```
\tcbuselibrary{theorems}
```

This also loads the package amsmath.

10.1   Macros of the Library

\newtcbtheorem[⟨*init options*⟩]{⟨*name*⟩}{⟨*display name*⟩}{⟨*options*⟩}{⟨*prefix*⟩}
   Creates new environments ⟨*name*⟩ and ⟨*name*⟩* based on `tcolorbox` to frame a (mathematical) theorem. The ⟨*display name*⟩ is used in the title line with a number, e. g. «Theorem 5.1». The ⟨*options*⟩ are given to the underlying `tcolorbox` to control the appearance. The ⟨*init options*⟩ allow setting up automatic numbering, see Section 4 on page 75. The new environment ⟨*name*⟩ takes one optional and two mandatory parameters. The optional parameter supplements the options and should be used only in rare cases. The first mandatory parameter is the title text for the theorem and the second mandatory parameter is a ⟨*marker*⟩. The theorem is automatically labeled with ⟨*prefix*⟩:⟨*marker*⟩.
   The new environment ⟨*name*⟩* takes one optional and one mandatory parameter and represents an unnumbered variant of the environment ⟨*name*⟩. This variant is not labeled and not listed in lists of theorems.

Definition in the preamble:

```
\newtcbtheorem[number within=section]{mytheo}{My Theorem}%
  {colback=green!5,colframe=green!35!black,fonttitle=\bfseries}{th}
```

```
\begin{mytheo}{This is my title}{theoexample}
  This is the text of the theorem. The counter is automatically assigned and,
  in this example, prefixed with the section number. This theorem is numbered with
  \ref{th:theoexample} and is given on page \pageref{th:theoexample}.
\end{mytheo}
```

> **My Theorem 10.1: This is my title**
>
> This is the text of the theorem. The counter is automatically assigned and, in this example, prefixed with the section number. This theorem is numbered with 10.1 and is given on page 222.

```
\begin{mytheo}[label=myownlabel]{This is my title}{}
  The label parameter can be left empty without \LaTeX\ error.
  Or you may use an own label to reference Theorem \ref{myownlabel}.
\end{mytheo}
```

> **My Theorem 10.2: This is my title**
>
> The label parameter can be left empty without LaTeX error. Or you may use an own label to reference Theorem 10.2.

```
\begin{mytheo}{}{}
  The title can also be left empty without problem. Note that the ':'
  vanished magically.
\end{mytheo}
```

> **My Theorem 10.3**
>
> The title can also be left empty without problem. Note that the ':' vanished magically.

```
\begin{mytheo*}{Unnumbered Theorem}
  This theorem is not numbered.
\end{mytheo*}
```

> **My Theorem: Unnumbered Theorem**
>
> This theorem is not numbered.

```
\begin{mytheo*}{}
  This theorem has no number and no title.
\end{mytheo*}
```

> **My Theorem**
>
> This theorem has no number and no title.

\renewtcbtheorem[⟨*init options*⟩]{⟨*name*⟩}{⟨*display name*⟩}{⟨*options*⟩}{⟨*prefix*⟩}

Operates like \newtcbtheorem^{→P.222}, but based on \renewenvironment instead of \newenvironment. An existing environment is redefined.

\tcbmaketheorem{⟨*name*⟩}{⟨*display name*⟩}{⟨*options*⟩}{⟨*counter*⟩}{⟨*prefix*⟩}

\newtcbtheorem^{→P.222} supersedes this macro.

Creates a new environment ⟨*name*⟩ based on **tcolorbox** to frame a (mathematical) theorem. The ⟨*display name*⟩ is used in the title line with a number, e.g. «Theorem 5.1». The ⟨*options*⟩ are given to the underlying **tcolorbox** to control the appearance. The ⟨*counter*⟩ is used for automatic numbering. The new environment ⟨*name*⟩ takes one optional and two mandatory parameters. The optional parameter supplements the options and should be used only in rare cases. The first mandatory parameter is the title text for the theorem and the second mandatory parameter is a ⟨*marker*⟩. The theorem is automatically labeled with ⟨*prefix*⟩:⟨*marker*⟩.

`\tcboxmath``[⟨`*options*`⟩]{⟨`*mathematical box content*`⟩}`

Creates a `tcolorbox`[→P.9] which is fitted to the width of the given ⟨*mathematical box content*⟩. This box is intended to be applied as part of a larger formula and may be used as replacement for the `\boxed` macro of `amsmath`.

```
\begin{equation}
\tcbset{fonttitle=\scriptsize}
\tcboxmath[colback=LightBlue!25!white,colframe=blue]{ a^2 = 16 }
\quad \Rightarrow \quad
\tcboxmath[colback=Salmon!25!white,colframe=red,title=Implication]%
  { a = 4 ~\vee~ a=-4. }
\end{equation}
```

$$ \boxed{a^2 = 16} \quad \Rightarrow \quad \boxed{\begin{array}{l}\text{Implication}\\ a = 4 \ \vee \ a = -4.\end{array}} \tag{3} $$

`\tcbhighmath``[⟨`*options*`⟩]{⟨`*mathematical box content*`⟩}`

This is a special case of the `\tcboxmath` macro which uses the style `/tcb/highlight math`[→P.231]. It is intended to provide context sensitive highlighting of formula parts. The color settings via `/tcb/highlight math style`[→P.231] may be different inside theorems or other colored areas and outside.

```
\tcbset{myformula/.style={colback=yellow!10!white,colframe=red!50!black,
  every box/.style={highlight math style={colback=LightBlue!50!white,colframe=Navy}}
  }}

\begin{align}
  \tcbhighmath{\sum\limits_{n=1}^{\infty} \frac{1}{n}} &= \infty.\\
  \int x^2 ~\text{d}x                              &= \frac13 x^3 + c.
\end{align}

\begin{tcolorbox}[ams align,myformula]
  \tcbhighmath{\sum\limits_{n=1}^{\infty} \frac{1}{n}} &= \infty.\\
  \int x^2 ~\text{d}x                              &= \frac13 x^3 + c.
\end{tcolorbox}
```

$$ \boxed{\sum_{n=1}^{\infty} \frac{1}{n}} = \infty. \tag{4} $$

$$ \int x^2 \ \mathrm{d}x = \frac{1}{3}x^3 + c. \tag{5} $$

$$ \boxed{\sum_{n=1}^{\infty} \frac{1}{n}} = \infty. \tag{6} $$

$$ \int x^2 \ \mathrm{d}x = \frac{1}{3}x^3 + c. \tag{7} $$

`\tcbhighmath`[→P.224] can be used in symbiosis with the `empheq` package which allows to specify own boxing commands to mark multiline formulas.

```
% \usepackage{empheq}
\begin{empheq}[box=\tcbhighmath]{align}
a&=\sin(z)\\
E&=mc^2 + \int_a^b x\, dx
\end{empheq}

\tcbset{highlight math style={enhanced,
  colframe=red!60!black,colback=yellow!50!white,arc=4pt,boxrule=1pt,
  drop fuzzy shadow}}

\begin{empheq}[box=\tcbhighmath]{align}
a&=\sin(z)\\
E&=mc^2 + \int_a^b x\, dx
\end{empheq}
```

$$a = \sin(z) \tag{8}$$

$$E = mc^2 + \int_a^b x \, dx \tag{9}$$

$$a = \sin(z) \tag{10}$$

$$E = mc^2 + \int_a^b x \, dx \tag{11}$$

Besides `\tcbhighmath`[→P.224], one can easily define an independent new box based on `\tcbox`[→P.11] which acts like `\tcbhighmath`[→P.224]:

```
% \usepackage{empheq}
\newtcbox{\otherbox}[1][]{nobeforeafter,math upper,tcbox raise base,
  enhanced,frame hidden,boxrule=0pt,interior style={top color=green!10!white,
  bottom color=green!10!white,middle color=green!50!yellow},
  fuzzy halo=1pt with green,#1}

\begin{empheq}[box=\otherbox]{align}
a&=\sin(z)\\
E&=mc^2 + \int_a^b x\, dx
\end{empheq}

\begin{equation}
\tcbhighmath{E} = \otherbox{mc^2}
\end{equation}
```

$$a = \sin(z) \tag{12}$$

$$E = mc^2 + \int_a^b x \, dx \tag{13}$$

$$E = mc^2 \tag{14}$$

10.2 Option Keys of the Library

/tcb/separator sign=⟨*sign*⟩   (no default, initially :)

The given ⟨*sign*⟩ is used inside the title text of a theorem as separater between display name combined with number and the specific title text. It is omitted, if there is no specific title text.

```
% \usepackage{amssymb}
\newtcbtheorem[use counter from=mytheo]{sometheorem}{Theorem}%
  {colback=white,colframe=red!50!black,fonttitle=\bfseries,
   separator sign={\ $\blacktriangleright$}}{theo}
\begin{sometheorem}{My example}{}
My theorem text.
\end{sometheorem}
```

Theorem 10.4 ▶ My example

My theorem text.

/tcb/separator sign colon   (style, no value, initially set)

Sets /tcb/separator sign to the default colon : sign.

/tcb/separator sign dash   (style, no value)

Sets /tcb/separator sign to an en-dash sign.

```
\newtcbtheorem[use counter from=mytheo]{sometheorem}{Theorem}%
  {colback=white,colframe=red!50!black,fonttitle=\bfseries,
   separator sign dash}{theo}
\begin{sometheorem}{My example}{}
My theorem text.
\end{sometheorem}
```

Theorem 10.5 – My example

My theorem text.

/tcb/separator sign none   (style, no value)

Sets /tcb/separator sign to empty.

```
\newtcbtheorem[use counter from=mytheo]{sometheorem}{Theorem}%
  {colback=white,colframe=red!50!black,fonttitle=\bfseries,
   separator sign none}{theo}
\begin{sometheorem}{My example}{}
My theorem text.
\end{sometheorem}
```

Theorem 10.6 My example

My theorem text.

/tcb/description delimiters={⟨*left*⟩}{⟨*right*⟩}   (no default, initially empty)

The given ⟨*left*⟩ and ⟨*right*⟩ delimiter signs are used to frame the descriptive title text of a theorem.

```
\newtcbtheorem[use counter from=mytheo]{sometheorem}{Theorem}%
  {colback=white,colframe=red!50!black,fonttitle=\bfseries,
   description delimiters={\flqq}{\frqq}}{theo}
\begin{sometheorem}{My example}{}
My theorem text.
\end{sometheorem}
```

> **Theorem 10.7: «My example»**
>
> My theorem text.

/tcb/description delimiters parenthesis   (style, no value)

Sets /tcb/description delimiters to (and).

```
\newtcbtheorem[use counter from=mytheo]{sometheorem}{Theorem}%
  {colback=white,colframe=red!50!black,fonttitle=\bfseries,
   description delimiters parenthesis}{theo}
\begin{sometheorem}{My example}{}
My theorem text.
\end{sometheorem}
```

> **Theorem 10.8: (My example)**
>
> My theorem text.

/tcb/description delimiters none   (style, no value, initially set)

Sets /tcb/description delimiters to the default empty texts.

/tcb/description color=⟨*color*⟩   (default empty, initially empty)

Sets the ⟨*color*⟩ of the descriptive title text deviating from /tcb/coltitle[→ P. 20]. The color is reset to /tcb/coltitle[→ P. 20], if `description color` is used without value.

```
\newtcbtheorem[use counter from=mytheo]{sometheorem}{Theorem}%
  {colback=white,colframe=red!50!black,fonttitle=\bfseries,
   description color=red!25!yellow}{theo}
\begin{sometheorem}{My example}{}
My theorem text.
\end{sometheorem}
```

> **Theorem 10.9: My example**
>
> My theorem text.

/tcb/description font=⟨*text*⟩   (default empty, initially empty)

Sets ⟨*text*⟩ (e. g. font settings) before the descriptive title text deviating from
/tcb/fonttitle[→ P. 21]. The ⟨*text*⟩ is removed, if `description font` is used without
value.

```
\newtcbtheorem[use counter from=mytheo]{sometheorem}{Theorem}%
  {colback=white,colframe=red!50!black,fonttitle=\bfseries,
   description delimiters={\glqq}{\grqq},
   description font=\mdseries\itshape}{theo}
\begin{sometheorem}{My example}{}
My theorem text.
\end{sometheorem}
```

Theorem 10.10: „*My example*"

My theorem text.

/tcb/description formatter=⟨*macro*⟩   (default empty, initially empty)

Sets ⟨*macro*⟩ as formatter for the descriptive title text. The ⟨*macro*⟩ has to take one manda-
tory argument (the description text).

Note that /tcb/description delimiters[→ P. 227], /tcb/description color[→ P. 227], and
/tcb/description font are ignored, if this option is used.

If `description formatter` is used without value, the formatter is reset to its standard
behavior.

```
\newtcbox{\formbox}{enhanced,frame empty,size=minimal,boxsep=2pt,arc=1pt,
  on line,interior style image=goldshade.png}

\newtcbtheorem[use counter from=mytheo]{sometheorem}{Theorem}%
  {colback=white,colframe=red!50!black,fonttitle=\bfseries,
   description formatter=\formbox}{theo}
\begin{sometheorem}{My example}{}
My theorem text.
\end{sometheorem}
```

Theorem 10.11: My example

My theorem text.

/tcb/terminator sign=⟨*sign*⟩   (no default, initially empty)

The given ⟨*sign*⟩ is used as terminator at the end of the title text of a theorem.

```
\newtcbtheorem[use counter from=mytheo]{sometheorem}{Theorem}%
  {colback=white,colframe=red!50!black,fonttitle=\bfseries,
   terminator sign={.}}{theo}
\begin{sometheorem}{My example}{}
My theorem text.
\end{sometheorem}
```

Theorem 10.12: My example.

My theorem text.

/tcb/terminator sign colon (style, no value, initially set)

Sets /tcb/terminator sign^{→P.228} to the colon : sign.

```
\newtcbtheorem[use counter from=mytheo]{sometheorem}{Theorem}%
  {colback=white,colframe=red!50!black,fonttitle=\bfseries,
   separator sign dash,terminator sign colon}{theo}
\begin{sometheorem}{My example}{}
My theorem text.
\end{sometheorem}
```

Theorem 10.13 – My example:

My theorem text.

/tcb/terminator sign dash (style, no value)

Sets /tcb/terminator sign^{→P.228} to an en-dash sign.

```
\newtcbtheorem[use counter from=mytheo]{sometheorem}{Theorem}%
  {colback=white,colframe=red!50!black,fonttitle=\bfseries,
   terminator sign dash}{theo}
\begin{sometheorem}{My example}{}
My theorem text.
\end{sometheorem}
```

Theorem 10.14: My example –

My theorem text.

/tcb/terminator sign none (style, no value)

Sets /tcb/terminator sign^{→P.228} to the default empty text.

/tcb/theorem name and number (style, no value, initially set)

Prints theorem name followed by theorem number inside the title.

```
\newtcbtheorem[use counter from=mytheo]{sometheorem}{Theorem}%
  {colback=white,colframe=red!50!black,fonttitle=\bfseries,
   theorem name and number}{theo}
\begin{sometheorem}{My example}{}
My theorem text.
\end{sometheorem}
```

Theorem 10.15: My example

My theorem text.

/tcb/theorem number and name (style, no value)

Prints theorem number followed by theorem name inside the title.

```
\newtcbtheorem[use counter from=mytheo]{sometheorem}{Theorem}%
  {colback=white,colframe=red!50!black,fonttitle=\bfseries,
   theorem number and name}{theo}
\begin{sometheorem}{My example}{}
My theorem text.
\end{sometheorem}
```

10.16 Theorem: My example

My theorem text.

/tcb/theorem name (style, no value)

Prints theorem name without number inside the title.

```
\newtcbtheorem[use counter from=mytheo]{sometheorem}{Theorem}%
  {colback=white,colframe=red!50!black,fonttitle=\bfseries,
   theorem name,enhanced,watermark text={\thetcbcounter}}{theo}
\begin{sometheorem}{My example}{}
My theorem text.
\end{sometheorem}
```

Theorem: My example

My theorem text. 10.17

/tcb/theorem=`{`⟨*display name*⟩`}{`⟨*counter*⟩`}{`⟨*title*⟩`}{`⟨*marker*⟩`}` (no default)

This key is internally used by `\tcbmaketheorem`^{→ P. 223}, but can be used directly in a `tcolorbox` for a more flexible approach. The ⟨*display name*⟩ is used together with the increased ⟨*counter*⟩ value and the ⟨*title*⟩ for the title line of the box. Additionally, a `\label` with the given ⟨*marker*⟩ is created.

```
% \newcounter{texercise}%  preamble
\begin{tcolorbox}[colback=green!10,colframe=green!50!black,arc=4mm,
                  theorem={Test}{texercise}{Direct usage}{myMarker}]
Here, we see the test \ref{myMarker}.
\end{tcolorbox}
```

Test 1: Direct usage

Here, we see the test 1.

For a common appearance inside the document, the key `theorem` should not be used directly as in the example above, but as part of a new environment created by hand or using `\tcbmaketheorem`^{→ P. 223} or using its successor `\newtcbtheorem`^{→ P. 222}.

/tcb/highlight math (style, no value)

Predefined style which is used for `\tcbhighmath`^{→P.224}. It can be changed comfortable with `/tcb/highlight math style`.

/tcb/highlight math style=⟨*style definition*⟩ (style, no default)

Changes the definition for `/tcb/highlight math` to the given ⟨*style definition*⟩. See `\tcbhighmath`^{→P.224} for another example.

```
% \tcbuselibrary{skins}
\tcbset{highlight math style={enhanced,%<-- needed for the 'remember' options
  colframe=red,colback=red!10!white,boxsep=0pt}}
\begin{align*}
\tcbhighmath[remember as=fx]{f(x)}
    &= \int\limits_{1}^{x} \frac{1}{t^2}~dt
     = \left[ -\frac{1}{t} \right]_{1}^{x}\\
    &= -\frac{1}{x} + \frac{1}{1}\\
    &=
\tcbhighmath[remember,overlay={%
    \draw[blue,very thick,->] (fx.south) to[bend right] ([yshift=2mm]frame.west);}]
  {1-\frac{1}{x}.}
\end{align*}
```

$$\boxed{f(x)} = \int\limits_{1}^{x} \frac{1}{t^2} \, dt = \left[-\frac{1}{t} \right]_{1}^{x}$$

$$= -\frac{1}{x} + \frac{1}{1}$$

$$= \boxed{1 - \frac{1}{x}.}$$

/tcb/math upper (style, no value)

Sets the upper part to mathematical mode with font `\displaystyle`.

/tcb/math lower (style, no value)

Sets the lower part to mathematical mode with font `\displaystyle`.

/tcb/math (style, no value)

Sets the upper part *and* lower part to mathematical mode with font `\displaystyle`.

```
\begin{tcolorbox}[math,colback=yellow!10!white,colframe=red!50!black]
  \sum\limits_{n=1}^{\infty} \frac{1}{n} = \infty.
\end{tcolorbox}
```

$$\sum_{n=1}^{\infty} \frac{1}{n} = \infty.$$

The following styles are only tested to work with the original `amsmath` environments. If e.g. the `equation` environment is redefined as `gather`, then `/tcb/ams equation` should / could not be used. Obviously, you are encouraged to use `/tcb/ams gather`[→ P. 234] in this case.

`/tcb/ams equation upper` (style, no value)
Adds an `amsmath` `equation` environment to the start and end of the upper part.

`/tcb/ams equation lower` (style, no value)
Adds an `amsmath` `equation` environment to the start and end of the lower part.

`/tcb/ams equation` (style, no value)
Adds an `amsmath` `equation` environment to the start and end of the upper *and* lower part.

```
\begin{tcolorbox}[ams equation,colback=yellow!10!white,colframe=red!50!black]
  \sum\limits_{n=1}^{\infty} \frac{1}{n} = \infty.
\end{tcolorbox}
```

$$\sum_{n=1}^{\infty} \frac{1}{n} = \infty. \tag{15}$$

`/tcb/ams equation* upper` (style, no value)
Adds an `amsmath` `equation*` environment to the start and end of the upper part.

`/tcb/ams equation* lower` (style, no value)
Adds an `amsmath` `equation*` environment to the start and end of the lower part.

`/tcb/ams equation*` (style, no value)
Adds an `amsmath` `equation*` environment to the start and end of the upper *and* lower part.

```
\begin{tcolorbox}[ams equation*,colback=yellow!10!white,colframe=red!50!black]
  \sum\limits_{n=1}^{\infty} \frac{1}{n} = \infty.
\end{tcolorbox}
```

$$\sum_{n=1}^{\infty} \frac{1}{n} = \infty.$$

/tcb/ams align upper (style, no value)

Adds an amsmath `align` environment to the start and end of the upper part.

/tcb/ams align lower (style, no value)

Adds an amsmath `align` environment to the start and end of the lower part.

/tcb/ams align (style, no value)

Adds an amsmath `align` environment to the start and end of the upper *and* lower part.

```
\begin{tcolorbox}[ams align,colback=yellow!10!white,colframe=red!50!black]
  \sum\limits_{n=1}^{\infty} \frac{1}{n} &= \infty.\\
  \int x^2 ~\text{d}x                    &= \frac13 x^3 + c.
\end{tcolorbox}
```

$$\sum_{n=1}^{\infty} \frac{1}{n} = \infty. \tag{16}$$

$$\int x^2 ~\mathrm{d}x = \frac{1}{3}x^3 + c. \tag{17}$$

/tcb/ams align* upper (style, no value)

Adds an amsmath `align*` environment to the start and end of the upper part.

/tcb/ams align* lower (style, no value)

Adds an amsmath `align*` environment to the start and end of the lower part.

/tcb/ams align* (style, no value)

Adds an amsmath `align*` environment to the start and end of the upper *and* lower part.

```
\begin{tcolorbox}[ams align*,colback=yellow!10!white,colframe=red!50!black]
  \sum\limits_{n=1}^{\infty} \frac{1}{n} &= \infty.\\
  \int x^2 ~\text{d}x                    &= \frac13 x^3 + c.
\end{tcolorbox}
```

$$\sum_{n=1}^{\infty} \frac{1}{n} = \infty.$$

$$\int x^2 ~\mathrm{d}x = \frac{1}{3}x^3 + c.$$

/tcb/ams gather upper (style, no value)

Adds an amsmath gather environment to the start and end of the upper part.

/tcb/ams gather lower (style, no value)

Adds an amsmath gather environment to the start and end of the lower part.

/tcb/ams gather (style, no value)

Adds an amsmath gather environment to the start and end of the upper *and* lower part.

```
\begin{tcolorbox}[ams gather,colback=yellow!10!white,colframe=red!50!black]
  \sum\limits_{n=1}^{\infty} \frac{1}{n} = \infty.\\
  \int x^2 ~\text{d}x = \frac13 x^3 + c.
\end{tcolorbox}
```

$$\sum_{n=1}^{\infty} \frac{1}{n} = \infty. \tag{18}$$

$$\int x^2 ~\mathrm{d}x = \frac{1}{3}x^3 + c. \tag{19}$$

/tcb/ams gather* upper (style, no value)

Adds an amsmath gather* environment to the start and end of the upper part.

/tcb/ams gather* lower (style, no value)

Adds an amsmath gather* environment to the start and end of the lower part.

/tcb/ams gather* (style, no value)

Adds an amsmath gather* environment to the start and end of the upper *and* lower part.

```
\begin{tcolorbox}[ams gather*,colback=yellow!10!white,colframe=red!50!black]
  \sum\limits_{n=1}^{\infty} \frac{1}{n} = \infty.\\
  \int x^2 ~\text{d}x = \frac13 x^3 + c.
\end{tcolorbox}
```

$$\sum_{n=1}^{\infty} \frac{1}{n} = \infty.$$

$$\int x^2 ~\mathrm{d}x = \frac{1}{3}x^3 + c.$$

/tcb/ams nodisplayskip upper (style, no value)

Neutralizes the `\abovedisplayskip` of a following `align` or `gather` environment for the upper part. Note that the text content has to start with such a formula.

/tcb/ams nodisplayskip lower (style, no value)

Neutralizes the `\abovedisplayskip` of a following `align` or `gather` environment for the lower part. Note that the text content has to start with such a formula.

/tcb/ams nodisplayskip (style, no value)

Neutralizes the `\abovedisplayskip` of a following `align` or `gather` environment for the upper part *and* lower part. Note that the text content has to start with such a formula.

```
\begin{tcolorbox}[ams nodisplayskip,colback=yellow!10!white,colframe=red!50!black]
  \begin{gather}
  \sum\limits_{n=1}^{\infty} \frac{1}{n} = \infty.\\
  \int x^2 ~\text{d}x = \frac13 x^3 + c.
  \end{gather}
  And now for something completely different.
\end{tcolorbox}
```

$$\sum_{n=1}^{\infty} \frac{1}{n} = \infty. \tag{20}$$

$$\int x^2 \ \mathrm{d}x = \frac{1}{3}x^3 + c. \tag{21}$$

And now for something completely different.

New colored mathematical environments are easily created using `\newtcolorbox`[→ P. 12]:

```
\newtcolorbox{mymath}{ams gather*,colback=yellow!10!white,colframe=red!50!black}

\begin{mymath}
  \sum\limits_{n=1}^{\infty} \frac{1}{n} = \infty.\\
  \int x^2 ~\text{d}x = \frac13 x^3 + c.
\end{mymath}
```

$$\sum_{n=1}^{\infty} \frac{1}{n} = \infty.$$

$$\int x^2 \ \mathrm{d}x = \frac{1}{3}x^3 + c.$$

All described options like `/tcb/ams gather upper`[→ P. 234], `/tcb/ams gather lower`[→ P. 234], `/tcb/ams gather`[→ P. 234] are (partially) setting (overwritting) the keys `/tcb/before upper`[→ P. 41], `/tcb/after upper`[→ P. 42], `/tcb/before lower`[→ P. 42], `/tcb/after lower`[→ P. 42].

Therefore, e.g. `\tcbset{ams gather,before upper={\text{Pythagoras:}}}` produces an invalid result. For this case, you are invited to use
`\tcbset{ams gather,before upper app={\text{Pythagoras:}}}`,
see `/tcb/before upper app`[→ P. 271].

/tcb/theorem style=⟨*name*⟩   (no default, initially `standard`)

Applies a predefined style ⟨*name*⟩ to the theorem environment. Some of the feasible ⟨*name*⟩ values resemble style names from the packages `theorem` and `ntheorem` to give convenient access to known patterns.

> The styles alter `/tcb/separator sign`[→P.226], `/tcb/description delimiters`[→P.227], `/tcb/terminator sign`[→P.228], and more. Therefore, one should apply such keys *after* a theorem style.

For the following examples, we use:

> *Definition in the preamble:*
>
> ```
> \newtcbtheorem[use counter from=mytheo]{theorem}{Theorem}{%
>   fonttitle=\bfseries\upshape,fontupper=\itshape,
>   colframe=green!50!black,colback=green!10!white,
>   colbacktitle=green!20!white,coltitle=blue!75!black}{theo}
> ```

The predefined styles are:

- **standard**: This is the initial value.

  ```
  \begin{theorem}[theorem style=standard]{standard}{}
  This is my theorem. \begin{equation*} a^2 + b^2 = c^2. \end{equation*}
  \end{theorem}
  ```

  > **Theorem 10.18: standard**
  >
  > *This is my theorem.*
  > $$a^2 + b^2 = c^2.$$

- **change standard**

  ```
  \begin{theorem}[theorem style=change standard]{change standard}{}
  This is my theorem. \begin{equation*} a^2 + b^2 = c^2. \end{equation*}
  \end{theorem}
  ```

  > **10.19 Theorem: change standard**
  >
  > *This is my theorem.*
  > $$a^2 + b^2 = c^2.$$

- **plain**

  ```
  \begin{theorem}[theorem style=plain]{plain}{}
  This is my theorem. \begin{equation*} a^2 + b^2 = c^2. \end{equation*}
  \end{theorem}
  ```

  > **Theorem 10.20 (plain):** *This is my theorem.*
  > $$a^2 + b^2 = c^2.$$

- **break**

  ```
  \begin{theorem}[theorem style=break]{break}{}
  This is my theorem. \begin{equation*} a^2 + b^2 = c^2. \end{equation*}
  \end{theorem}
  ```

  > **Theorem 10.21 (break):**
  > *This is my theorem.*
  > $$a^2 + b^2 = c^2.$$

- **plain apart**

  ```
  \begin{theorem}[theorem style=plain apart]{plain apart}{}
  This is my theorem. \begin{equation*} a^2 + b^2 = c^2. \end{equation*}
  \end{theorem}
  ```

  > **Theorem 10.22 (plain apart)**
  >
  > *This is my theorem.*
  > $$a^2 + b^2 = c^2.$$

- **change**

  ```
  \begin{theorem}[theorem style=change]{change}{}
  This is my theorem. \begin{equation*} a^2 + b^2 = c^2. \end{equation*}
  \end{theorem}
  ```

  > **10.23 Theorem (change):** *This is my theorem.*
  > $$a^2 + b^2 = c^2.$$

- **change break**

  ```
  \begin{theorem}[theorem style=change break]{change break}{}
  This is my theorem. \begin{equation*} a^2 + b^2 = c^2. \end{equation*}
  \end{theorem}
  ```

  > **10.24 Theorem (change break):**
  > *This is my theorem.*
  > $$a^2 + b^2 = c^2.$$

- **change apart**

  ```
  \begin{theorem}[theorem style=change apart]{change apart}{}
  This is my theorem. \begin{equation*} a^2 + b^2 = c^2. \end{equation*}
  \end{theorem}
  ```

  > **10.25 Theorem (change apart)**
  >
  > *This is my theorem.*
  > $$a^2 + b^2 = c^2.$$

- **margin**

  ```
  \begin{theorem}[theorem style=margin,left=10mm]{margin}{}
  This is my theorem. \begin{equation*} a^2 + b^2 = c^2. \end{equation*}
  \end{theorem}
  \begin{theorem}[theorem style=margin,left=10mm,oversize]{margin}{}
  This is my theorem. \begin{equation*} a^2 + b^2 = c^2. \end{equation*}
  \end{theorem}
  ```

  10.26 Theorem (margin): *This is my theorem.*
  $$a^2 + b^2 = c^2.$$

  10.27 Theorem (margin): *This is my theorem.*
  $$a^2 + b^2 = c^2.$$

- **margin break**

  ```
  \begin{theorem}[theorem style=margin break,left=10mm]{margin break}{}
  This is my theorem. \begin{equation*} a^2 + b^2 = c^2. \end{equation*}
  \end{theorem}
  \begin{theorem}[theorem style=margin break,left=10mm,oversize]{margin break}{}
  This is my theorem. \begin{equation*} a^2 + b^2 = c^2. \end{equation*}
  \end{theorem}
  ```

  10.28 Theorem (margin break):
      This is my theorem.
  $$a^2 + b^2 = c^2.$$

  10.29 Theorem (margin break):
      This is my theorem.
  $$a^2 + b^2 = c^2.$$

- **margin apart**

  ```
  \begin{theorem}[theorem style=margin apart,left=10mm]{margin apart}{}
  This is my theorem. \begin{equation*} a^2 + b^2 = c^2. \end{equation*}
  \end{theorem}
  \begin{theorem}[theorem style=margin apart,left=10mm,oversize]{margin apart}{}
  This is my theorem. \begin{equation*} a^2 + b^2 = c^2. \end{equation*}
  \end{theorem}
  ```

  10.30 Theorem (margin apart)

      This is my theorem.
  $$a^2 + b^2 = c^2.$$

  10.31 Theorem (margin apart)

      This is my theorem.
  $$a^2 + b^2 = c^2.$$

10.3 Examples for Definitions and Theorems

In the following, the application of `\tcbmaketheorem`[→P.223] to highlight mathematical definitions, theorems, or the like is demonstrated.

At first, additional `tcb` keys are created for the appearance of the colored boxes. It is assumed that theorems and corollaries should be identically colored. All following environments are numbered with a common counter, but this can be changed easily. Here, the counter output is supplemented by the subsection number.

Definition in the preamble:

```
\tcbset{
  defstyle/.style={fonttitle=\bfseries\upshape, fontupper=\slshape,
            arc=0mm, colback=blue!5!white,colframe=blue!75!black},
  theostyle/.style={fonttitle=\bfseries\upshape, fontupper=\slshape,
            colback=red!10!white,colframe=red!75!black},
}
\newtcbtheorem[number within=subsection]{Definition}{Definition}{defstyle}{def}
\newtcbtheorem[use counter from=Definition]{Theorem}{Theorem}{theostyle}{theo}
\newtcbtheorem[use counter from=Definition]{Corollary}{Corollary}{theostyle}{cor}
```

By `\newtcbtheorem`[→P.222], commonly numbered theorem environments are created now. `defstyle` and `theostyle` are used for the appearance.

Now, everything is prepared for the following examples.

```
The following theorem is numbered as Theorem \ref{theo:diffbarstetig} and
referenced with the marker \texttt{theo:diffbarstetig}.\bigskip

\begin{Theorem}{Differenzierbarkeit bedingt Stetigkeit, wobei diese Benennung
  zu Testzwecken ungew\"{o}hnlich lang ist}{diffbarstetig}%
  Eine Funktion $f:I\to\mathbb{R}$ ist in $x_0\in I$ stetig, wenn $f$ in
  $x_0$ differenzierbar ist.
\end{Theorem}
```

The following theorem is numbered as Theorem 10.3.1 and referenced with the marker `theo:diffbarstetig`.

> **Theorem 10.3.1: Differenzierbarkeit bedingt Stetigkeit, wobei diese Benennung zu Testzwecken ungewöhnlich lang ist**
>
> *Eine Funktion $f : I \to \mathbb{R}$ ist in $x_0 \in I$ stetig, wenn f in x_0 differenzierbar ist.*

```
The following definition is numbered as Definition \ref{def:diffbarkeit} and
referenced with the marker \texttt{def:diffbarkeit}.\bigskip

\begin{Definition}{Differenzierbarkeit}{diffbarkeit}
  Eine Funktion $f:~I\to\mathbb{R}$ auf einem Intervall $I$ hei\ss{}t in
  $x_0\in I$ differenzierbar oder linear approximierbar,
  wenn der Grenzwert
  \begin{equation*}
  \lim\limits_{x\to x_0}\frac{f(x)-f(x_0)}{x-x_0}=
  \lim\limits_{h\to 0}\frac{f(x_0+h)-f(x_0)}{h}
  \end{equation*}
  existiert. Bei Existenz hei\ss{}t dieser Grenzwert Ableitung
  oder Differentialquotient von $f$ in $x_0$ und man
  schreibt f\"{u}r ihn
  \begin{equation*}
  f'(x_0)\quad\text{oder}\quad\frac{df}{dx}(x_0).
  \end{equation*}
\end{Definition}
```

The following definition is numbered as Definition 10.3.2 and referenced with the marker `def:diffbarkeit`.

> **Definition 10.3.2: Differenzierbarkeit**
>
> *Eine Funktion $f : I \to \mathbb{R}$ auf einem Intervall I heißt in $x_0 \in I$ differenzierbar oder linear approximierbar, wenn der Grenzwert*
> $$\lim_{x \to x_0} \frac{f(x) - f(x_0)}{x - x_0} = \lim_{h \to 0} \frac{f(x_0 + h) - f(x_0)}{h}$$
> *existiert. Bei Existenz heißt dieser Grenzwert Ableitung oder Differentialquotient von f in x_0 und man schreibt für ihn*
> $$f'(x_0) \quad oder \quad \frac{df}{dx}(x_0).$$

```
The following corollary is numbered as Corollary \ref{cor:nullstellen} and
referenced with the marker \texttt{cor:nullstellen}.\bigskip

\begin{Corollary}{Nullstellenexistenz}{nullstellen}
  Ist $f:[a,b]\to\mathbb{R}$ stetig und haben $f(a)$ und $f(b)$ entgegengesetzte
  Vorzeichen, also $f(a)f(b)<0$, so besitzt $f$ eine Nullstelle $x_0\in]a,b[$,
  also $f(x_0)=0$.
\end{Corollary}
```

The following corollary is numbered as Corollary 10.3.3 and referenced with the marker `cor:nullstellen`.

> **Corollary 10.3.3: Nullstellenexistenz**
>
> *Ist $f : [a,b] \to \mathbb{R}$ stetig und haben $f(a)$ und $f(b)$ entgegengesetzte Vorzeichen, also $f(a)f(b) < 0$, so besitzt f eine Nullstelle $x_0 \in]a,b[$, also $f(x_0) = 0$.*

```
\begin{Theorem}[boxrule=2mm,toptitle=-1.5mm,bottomtitle=-1.5mm]{%
    Hinreichende Bedingung f\"{u}r Wendepunkte}{wendehinreichend}%
  $f$ sei eine auf einem Intervall $]a,b[$ dreimal stetig differenzierbare Funktion.
  Ist $f''(x_0)=0$ in $x_0\in]a,b[$ und $f'''(x_0)\ne 0$, so ist
  $(x_0,f(x_0))$ ein Wendepunkt von $f$.
\end{Theorem}
```

Theorem 10.3.4: Hinreichende Bedingung für Wendepunkte

f sei eine auf einem Intervall $]a, b[$ dreimal stetig differenzierbare Funktion. Ist $f''(x_0) = 0$ in $x_0 \in]a, b[$ und $f'''(x_0) \neq 0$, so ist $(x_0, f(x_0))$ ein Wendepunkt von f.

```
% \usepackage{varioref}
% \usepackage{cleveref}
% \tcbuselibrary{skins}

Theorem 10.3.9 (Mittelwertsatz für n Variable): *Es sei $n \in \mathbb{N}$, $D \subseteq \mathbb{R}^n$ eine offene Menge und $f \in C^1(D, \mathbb{R})$. Dann gibt es auf jeder Strecke $[x_0, x] \subset D$ einen Punkt $\xi \in [x_0, x]$, so dass gilt*

$$f(x) - f(x_0) = \operatorname{grad} f(\xi)^{\top}(x - x_0)$$

11   Library ᴸᴵᴮ breakable

The library is loaded by a package option or inside the preamble by:

```
\tcbuselibrary{breakable}
```

11.1   Technical Overview

The library ᴸᴵᴮ breakable supports the automatic breaking of a `tcolorbox`. This feature is enabled by `/tcb/breakable`→P. 246 and disabled by `/tcb/unbreakable`→P. 247.

If a `tcolorbox` is set to be `/tcb/breakable`→P. 246, then the following algorithm is executed:

1. The box content is read to a box register similar but not identical to the unbreakable case.

2. If the total box fits into the current page, it is shipped out visibly unbroken and the algorithm stops.

   > **Unbroken Box**
   >
   > The box.   *unbroken*

3. Otherwise, it is checked if at least `/tcb/lines before break`→P. 247 of the upper box can be placed on the current page. If not, a page break is inserted and the algorithm goes back to Step 2.

4. Now, the *break sequence* starts. The upper box part or the lower box part is split such that it fits into the current page. The fitting part is named *first part* of the *break sequence* and shipped out.

   > **Broken Box**
   >
   > The box.   *first*

5. If the remaining content of the total box fits into the current page, the algorithm continues with Step 7, else with Step 6.

6. The upper box part or the lower box part is split such that it fits into the current page. The fitting part is named *middle part* of the *break sequence* and shipped out. Then, the algorithm goes back to Step 5.

   > The box.   *middle*

7. The remaining part is named *last part* of the *break sequence* and shipped out. The algorithm stops.

   > The box.   *last*

The algorithm takes care that the optional segmentation line never appears at the end of a box. The optional lower box part is also checked to have at least `/tcb/lines before break`→P. 247.

In principal, all boxes of the *break sequence* share the same geometric parameters. The differences are:

- The given `/tcb/before`$^{\rightarrow\text{P.}59}$ and `/tcb/after`$^{\rightarrow\text{P.}59}$ values are used only before the *first* and after the *last* part of the *break sequence*.

- A special behavior between the parts of the *break sequence* can be given by `/tcb/toprule at break`$^{\rightarrow\text{P.}249}$, `/tcb/bottomrule at break`$^{\rightarrow\text{P.}249}$, `/tcb/enlarge top at break by`$^{\rightarrow\text{P.}61}$, and `/tcb/enlarge bottom at break by`$^{\rightarrow\text{P.}61}$.

- The `/tcb/skin`$^{\rightarrow\text{P.}81}$ decides *how* the *first*, *middle*, and *last* part look like. Actually, every part type has its own skin given by the options `/tcb/skin first`$^{\rightarrow\text{P.}81}$, `/tcb/skin middle`$^{\rightarrow\text{P.}81}$, and `/tcb/skin last`$^{\rightarrow\text{P.}81}$. Typically, these options are set automatically by the main skin, see Subsection 11.5 from page 251.

11.2 Limitations and Known Bugs

- The box content is a TeX `\vbox` register which has a restricted capacity. Therefore, you cannot place hundreds of pages inside a `tcolorbox`.

- You can nest an unbreakable `tcolorbox` inside another `tcolorbox`, even inside a breakable one. But you cannot not nest a breakable box inside a breakable box. The `/tcb/breakable`$^{\rightarrow\text{P.}246}$ key for a nested box is ignored automatically[3], i.e. inner boxes are always unbreakable.

  After all, in the unlikely case you really want to have the nested box to be breakable, use `/tcb/enforce breakable`$^{\rightarrow\text{P.}247}$ for the nested box[4]. **But, a breakable box inside a breakable box will usually give a mess.**

- If your text content contains some text color changing commands, your color will not survive the break to the next box.

---

[3]Until `tcolorbox` 3.04, the `/tcb/breakable`$^{\rightarrow\text{P.}246}$ key was not ignored for nested boxes.

[4] `/tcb/enforce breakable`$^{\rightarrow\text{P.}247}$ acts like `/tcb/breakable`$^{\rightarrow\text{P.}246}$ until `tcolorbox` 3.04.

11.3 Main Option Keys

/tcb/breakable=true|false   (default `true`, initially `false`)

Allows the `tcolorbox` to be breakable. If the box is larger than the available space at the current page, the box is automatically broken and continued to the next next page. All sorts of `tcolorbox` can be made breakable. It depends on the skin how the breaking looks like. If you do not know better, use `/tcb/enhanced`^{→P.142} for breaking a box. The parts of the *break sequence* are numbered by the counter `tcbbreakpart`.

```
% \usepackage{lipsum}  % preamble
\tcbset{enhanced jigsaw,colback=red!5!white,colframe=red!75!black,
  watermark color=yellow!25!white,watermark text=\arabic{tcbbreakpart},
  fonttitle=\bfseries}

\begin{tcolorbox}[breakable,title=My breakable box]
\lipsum[1-6]
\end{tcolorbox}
```

/tcb/unbreakable (no value, initially set)

Sets the `tcolorbox` to be unbreakable.

/tcb/enforce breakable (no value)

A `tcolorbox` inside a `tcolorbox` is automatically set to be unbreakable. Using `/tcb/breakable`→P.246 on such an inner box has no effect. If one *really* wants the inner box to be breakable, use `/tcb/enforce breakable`. **This will usually give a mess of shattered boxes. You are advised to not use this option.**

Note that `/tcb/enforce breakable` has the functionality that `/tcb/breakable`→P.246 had until package version 3.04 and exists for backward compatibility.

/tcb/title after break=⟨*text*⟩ (no default, initially empty)

The `/tcb/title`→P.14 is used only for the *first* part of a *break sequence*. Use `title after break` to create a heading line with ⟨*text*⟩ as content for all following parts.

/tcb/notitle after break (no value, initially set)

Removes the title line or following parts in a *break sequence* if set before.

/tcb/adjusted title after break=⟨*text*⟩ (style, no default, initially unset)

Works like `/tcb/adjusted title`→P.14 but applied to `/tcb/title after break`.

/tcb/lines before break=⟨*number*⟩ (no default, initially 2)

Assures that the given ⟨*number*⟩ of lines of the upper box part or the lower box part are placed before a break happens.

/tcb/enlargepage=⟨*length*⟩/⟨*length*⟩.../⟨*length*⟩   (no default, initially `0pt`)

Inserts a `\enlargethispage{`⟨*length*⟩`}` to the pages of the break sequence, i.e. allows one to enlarge (or shrink) partial boxes. The first ⟨*length*⟩ is applied to the first partial box, the second ⟨*length*⟩ is applied to the second partial box, and so on. The last ⟨*length*⟩ value is applied to all following partial boxes if any. Note that floating boxes will not be enlarged.

```
\begin{tcolorbox}[breakable,enlargepage=0mm/\baselineskip/2\baselineskip/0mm,...
```

The example code enlarged the second partial box by one line, the third partial box by two lines, and all following parts are not enlarged.

If an automated page break occures before the first partial box, the page enlargement is applied to the page before the first partial box *and* again to the page of the first partial box. Insert a manual break to prevent this.

In general, `enlargepage` should be used at the final stage of a document for fine-tuning only.

/tcb/shrink break goal=⟨*length*⟩   (no default, initially `0pt`)

This is an emergency parameter if the break algorithm produces unpleasant breaks. It shrinks the goal height of the current box part by ⟨*length*⟩ which may result in smaller boxes. Never use negative values.

11.4 Option Keys for the Break Appearance

/tcb/toprule at break=⟨*length*⟩ (no default, initially 0.5mm)
Sets the line width of the top rule to ⟨*length*⟩ *if* the box is `/tcb/breakable`→P. 246.
In this case, it is applied to *middle* and *last* parts in a break sequence. Note that
`/tcb/toprule`→P. 22 overwrites this value if used afterwards.

/tcb/bottomrule at break=⟨*length*⟩ (no default, initially 0.5mm)
Sets the line width of the bottom rule to ⟨*length*⟩ *if* the box is `/tcb/breakable`→P. 246.
In this case, it is applied to *first* and *middle* parts in a break sequence. Note that
`/tcb/bottomrule`→P. 22 overwrites this value if used afterwards.

/tcb/topsep at break=⟨*length*⟩ (no default, initially 0mm)
Additional vertical space of ⟨*length*⟩ which is added at the top of *middle* and *last* parts in a
break sequence. In general, it is not advisable to change this value if these parts start with
a rule or a title.

/tcb/bottomsep at break=⟨*length*⟩ (no default, initially 0mm)
Additional vertical space of ⟨*length*⟩ which is added at the bottom of *first* and *middle* parts
in a break sequence. In general, it is not advisable to change this value if these parts end
with a rule.

/tcb/pad before break=⟨*length*⟩ (style, no default, initially 3.5mm)
Sets the total amount of vertical space after the text content and before the break point
to ⟨*length*⟩. This style sets `/tcb/toprule at break` to `0pt` and changes `/tcb/topsep at`
`break` as required. In general, it is not advisable to change this value if the *middle* and *last*
parts in a break sequence start with a rule or a title.

/tcb/pad after break=⟨*length*⟩ (style, no default, initially 3.5mm)
Sets the total amount of vertical space after the break point and before the text content to
⟨*length*⟩. This style sets `/tcb/bottomrule at break` to `0pt` and changes `/tcb/bottomsep`
`at break` as required. In general, it is not advisable to change this value if the *first* and
middle parts in a break sequence end with a rule.

/tcb/pad at break=⟨*length*⟩ (style, no default, initially 3.5mm)
Abbreviation for setting ⟨*length*⟩ to `/tcb/pad before break` and `/tcb/pad after break`.

```
% \usepackage{lipsum}  % preamble
\tcbset{colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[enhanced jigsaw,breakable,pad at break=0mm,
  title={For this box, the pad space at the break point is set to 0mm}]
  \lipsum[1-2]
\end{tcolorbox}
```

For this box, the pad space at the break point is set to 0mm

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut,

11.6 Break by Hand (Faked Break)

Since the appearance of broken boxes is done by skins, it is quite easy to 'fake a break'. For this, you actually don't need the `⬛LIB breakable` library at all.

```
\tcbset{enhanced,equal height group=fakedbreak,
  colback=LightGreen,colframe=DarkGreen,
  width=(\linewidth-6mm)/3,nobeforeafter,
  left=1mm,right=1mm,top=1mm,bottom=1mm,middle=1mm}
%
\begin{tcolorbox}[title=My broken box,skin=enhancedfirst]

My broken box		
This is a box which breaks from one column to another	column. I am sorry to say that this is a trick. Nevertheless, you may use this trick for your	own purposes.

12 Library ᴸᴵᴮ fitting

The library is loaded by a package option or inside the preamble by:

```
\tcbuselibrary{fitting}
```

12.1 Macros of the Library

\tcboxfit[⟨*options*⟩]{⟨*box content*⟩}

Creates a colored box where the given ⟨*box content*⟩ is fitted to the width and height of the box. A `tcboxfit` has to have a fixed height. If no fixed height is given, a square box is constructed. In principal, most ⟨*options*⟩ for a `tcolorbox`^{→P. 9} can be used for `\tcboxfit` with some restrictions. A `\tcboxfit` cannot have a lower part and cannot be broken.

```
% \usepackage{lipsum}
\tcbset{colframe=blue!50!black,colback=red!10!white,
        boxsep=0pt,top=1mm,bottom=1mm,left=1mm,right=1mm,
        nobeforeafter,width=(\linewidth-2mm)/3}

\tcboxfit[height=8cm]{\lipsum[1]}\hfill
\tcboxfit[height=4cm]{\lipsum[1]}\hfill
\tcboxfit[height=2cm]{\lipsum[1]}

\medskip
\tcbset{width=(\linewidth-2mm)/2,colback=green!10!white,boxsep=1mm}
\tcboxfit[height=4cm]{\lipsum[2]}\hfill
\tcboxfit[height=4cm,title=With a title]{\lipsum[2]}
```

\newtcboxfit[⟨*init options*⟩]{\\⟨*name*⟩}[⟨*number*⟩][⟨*default*⟩]{⟨*options*⟩}

Creates a new macro \\⟨*name*⟩ based on **\tcboxfit**[→ P. 260]. Basically, \newtcboxfit operates like \newcommand. The new macro \\⟨*name*⟩ optionally takes ⟨*number*⟩+1 arguments, where ⟨*default*⟩ is the default value for the optional first argument. The ⟨*options*⟩ are given to the underlying tcboxfit. The ⟨*init options*⟩ allow setting up automatic numbering, see Section 4 from page 75.

```
\newtcboxfit{\mybox}{colback=red!5!white,
  colframe=red!75!black,width=4cm,
  height=1.5cm,center upper}

\mybox{This is my own box.}\par
\mybox{This is my own box with more text
    to be written.}
```

This is my own box.

Pellentesque cursus luctus mauris.

\renewtcboxfit[⟨*init options*⟩]{\\⟨*name*⟩}[⟨*number*⟩][⟨*default*⟩]{⟨*options*⟩}

Operates like \newtcboxfit, but based on \renewcommand instead of \newcommand. An existing macro is redefined.

\tcbfontsize{⟨*factor*⟩}

Selects a font size inside a tcolorbox which is scaled with the given ⟨*factor*⟩ relative to \tcbfitdim.

```
\tcbset{colback=red!5!white,colframe=red!75!black}
\begin{tcolorbox}[fit basedim=10pt]
  {\tcbfontsize{0.25} Very tiny,}\\
  {\tcbfontsize{0.5} Small,}\\
  {\tcbfontsize{1} Normal,}\\
  {\tcbfontsize{2} Large,}\\
  {\tcbfontsize{4} Huge.}
\end{tcolorbox}
```

Very tiny,

Small,

Normal,

Large,

Huge.

12.2 Option Keys of the Library

The font size for the content of a box with fixed width and fixed height can be adjusted automatically. This is called the *fitbox capture mode*. Note that the fit control algorithm constructs a series of versions for the box and selects the 'best'. Therefore, the compilation time is quite longer than for a normal box. The algorithm will fail, if a different selected font size does not change the overall size of the box content. The `\tcboxfit`^{→P. 260} macro uses this algorithm by default.

> The fit control keys are only applicable to unbreakable boxes without a lower part. The box content should not change counters.

/tcb/fit (style, initially unset)

Sets the `/tcb/capture`^{→P. 69} mode to `fitbox`, i.e. enables the font size adjustment algorithm. Thereby, a `tcolorbox`^{→P. 9} acts like `\tcboxfit`^{→P. 260} where the given ⟨*box content*⟩ is fitted to the width and height of the box. Therefore, the box has to have a fixed height. If no fixed height is given, a square box is constructed. The font dimension `\tcbfitdim` can also be used to adjust the margins of the box since a box with a tiny font may not need large margins. The number of constructed boxes is saved to the macro `\tcbfitsteps` for analysis.

```
% \usepackage{lipsum}
% \tcbuselibrary{skins}
\newtcolorbox{fitting}[2][]{fit,height=#2,boxsep=1pt,valign=center,opacityupper=0.5,
  top=0.4\tcbfitdim,bottom=0.4\tcbfitdim,left=0.75\tcbfitdim,right=0.75\tcbfitdim,
  enhanced,watermark text={\tcbfitsteps},colframe=blue!75!black,colback=white,#1}

/tcb/fit to=⟨*width*⟩ **and** ⟨*height*⟩ (style, initially unset)
Shortcut for using **/tcb/fit**^{→P.262} and setting the ⟨*width*⟩ and ⟨*height*⟩ values separately.

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[fit to=3cm and 2cm]
  This box content is fitted to the given
  dimensions.
\end{tcolorbox}
```

> This box con-
> tent is fitted
> to the given
> dimensions.

/tcb/fit to height=⟨*height*⟩ (style, initially unset)
Shortcut for using **/tcb/fit**^{→P.262} and setting the ⟨*height*⟩ value separately.

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[fit to height=2cm]
  This box content is fitted to the given
  height.
\end{tcolorbox}
```

> This box content is fitted to
> the given height.

/tcb/fit basedim=⟨*length*⟩ (no default, initially `10pt`)
Sets the starting font dimension for the font size adjustment algorithm to ⟨*length*⟩. The algorithm never enlarges this dimension.

```
\tcbset{colback=red!5!white,colframe=red!75!black}

\begin{tcolorbox}[fit to=4cm and 2cm]
  Too few words for the box.
\end{tcolorbox}

\begin{tcolorbox}[fit to=4cm and 2cm,
  fit basedim=50pt]
  Enough words for the box.
\end{tcolorbox}
```

> Too few words for
> the box.

> Enough words
> for the box.

/tcb/fit skip=⟨*real value*⟩ (no default, initially `1.2`)
Sets the skip value of the selected font to ⟨*real value*⟩ times **\tcbfitdim**.

```
% \usepackage{lipsum}
\tcbset{colback=red!5!white,
  colframe=red!75!black,left=1mm,
  right=1mm,boxsep=0mm}

\begin{tcolorbox}[fit to=5cm and 4cm,
  fit skip=1.0  ]
  \lipsum[1]
\end{tcolorbox}
```

`/tcb/fit fontsize macros` (style, initially unset)

Redefines the standard LATEX font size macros \tiny, \scriptsize, \footnotesize, \small, \normalsize, \large, \Large, \LARGE, \huge, and \Huge, to set font sizes relative to the current `\tcbfitdim`. Note that the display skip values for mathematical formulas are respected by the redefined macros.

```
% \usepackage{lipsum}
\tcbset{colback=red!5!white,
  colframe=red!75!black,left=1mm,
  right=1mm,boxsep=0mm}

\begin{tcolorbox}[fit to height=4cm]

Typically, the optional title of a `tcolorbox` is not part of the fit operation. If a `/tcb/fit width plus` is applied, the title is also adapted to the new width. If counters are increased inside the title text, they may be increased more than one time. To avoid this, you are encouraged to use `/tcb/phantom`^{→P.72} or `/tcb/step and label`^{→P.72} to set counters or use automatic numbering, see Subsection 4.1 from page 75.

/tcb/fit width from=⟨*min*⟩ **to** ⟨*max*⟩ (style, no default)

Sets the box width to ⟨*min*⟩ and allows the width to grow up to ⟨*max*⟩.

```
% \usepackage{lipsum}
\tcbset{colback=red!5!white,colframe=red!75!black,left=1mm,top=1mm,bottom=1mm,

Pellentesque cursus luctus mauris.

`/tcb/fit algorithm`=⟨*name*⟩ (no default, initially `fontsize`)

Sets the algorithm for the fitting process *after* optionally width and height are adapted. Feasible values for ⟨*name*⟩ are:

- **`fontsize`** (initial): The algorithm is a bisection method that adapts the font size until certain stop conditions are fulfilled. This is the most time-consuming method but it is robust and gives pleasant results.

  The used font has to be freely scalable for this method! Other content than text is not scaled down. The aspect ratio is fully garanteed.

- **`areasize`**: The algorithm calculates the area size for the text without scaling the font. The text box is shaped for the needed aspect ratio in one or two steps. Finally, it is scaled down with a standard `\resizebox` macro.

  The used font has not to be scalable. Every box content is scaled down. The aspect ratio cannot be fully garanteed.

- **`hybrid`**: First, this algorithm estimates the needed font size in one or two steps. Then an `areasize` fitting as above is a applied.

  The used font has to be freely scalable for this method! Other content than text may be slightly rescaled. The aspect ratio cannot be fully garanteed.

- **`squeeze`**: The text box is brutally scaled down to fit.

  The aspect ratio is very likely to be horrible. You should not use this method for final documents.

```
% \usepackage{lipsum}
\newtcboxfit{mybox}[1]{colback=red!5!white,colframe=red!75!black,left=1mm,top=1mm,
  bottom=1mm,right=1mm,boxsep=0mm,width=3.5cm,height=7cm,nobeforeafter,
  before upper=\textcolor{blue}{\rule{5mm}{5mm}}\ ,
  enhanced,watermark text={\tcbfitsteps},
  fonttitle=\bfseries,adjusted title=#1,fit algorithm=#1}

\mybox{fontsize}{\lipsum[2]}\hfill
\mybox{hybrid}{\lipsum[2]}\hfill
\mybox{areasize}{\lipsum[2]}\hfill
\mybox{squeeze}{\lipsum[2]}

Quality \dotfill versus \dotfill Speed
```

The following options set control parameters for the fit algorithm. Mainly, they apply to the `fontsize` variant, see `/tcb/fit algorithm`→P.268. The options should be seen as experimental and are likely to change in future versions, if necessary.

/tcb/fit maxstep=⟨*number*⟩   (no default, initially `20`)

> Sets the maximal step size for the font size adjustment algorithm. In normal situations, the algorithm stops before reaching the intial value of 20 steps. If the box content does not shrink, this value prevents an endless loop.

/tcb/fit maxfontdiff=⟨*dimension*⟩   (no default, initially `0.1pt`)

> The algorithm stops, if the font size is determined within a deviation of ⟨*dimension*⟩.

/tcb/fit maxfontdiffgap=⟨*dimension*⟩   (no default, initially `1pt`)

> The algorithm stops, if the number of lines is determined and the font size is determined within a deviation of ⟨*dimension*⟩.

/tcb/fit maxwidthdiff=⟨*dimension*⟩   (no default, initially `1pt`)

> The algorithm stops, if the (optionally) flexible box width is determined within a deviation of ⟨*dimension*⟩.

/tcb/fit maxwidthdiffgap=⟨*dimension*⟩   (no default, initially `10pt`)

> The algorithm stops, if the number of lines is determined and the (optionally) flexible box width is determined within a deviation of ⟨*dimension*⟩.

/tcb/fit warning=⟨*value*⟩   (no default, initially `off`)

> Typically, the fit control algorithm constructs several auxiliary boxes to determine the optimal one. If not switched off, the construction of the auxiliary boxes may produce many `hbox` warnings. This option key changes the `\hbadness` value.
> - `off`: Most of 'Underfull \hbox' and 'Overfull \hbox' warnings are switched off (including the ones for the finally used box).
> - `on`: All warnings for all auxiliary boxes are displayed.
> - `final`: Only warnings for the finally used box are displayed. Note that an additional box has to be contructed for theses messages.

13   Library ᴸᴵᴮ hooks

The library is loaded by a package option or inside the preamble by:

```
\tcbuselibrary{hooks}
```

For the skin related options, the library ᴸᴵᴮ skins has to be loaded separately.

13.1   Concept of Hooks

A hook is a placeholder in some LaTeX code where additional code can be added. For example, the LaTeX macro `\AtBeginDocument` adds code to a hook which is placed at the beginning of every document.

Several option keys of `tcolorbox` allow providing some code which is added to specific places of a colored box. For example, `/tcb/before upper`→P.41 places code before the content of the upper part. A following usage of this key overwrites any prior settings.

The library ᴸᴵᴮ hooks extends `/tcb/before upper`→P.41 and several more existing keys to 'hook-able' versions, e. g. `/tcb/before upper app`→P.271 and `/tcb/before upper pre`→P.271. The 'hookable' keys don't overwrite prior settings but either *app*end or *pre*pend the newly given code to the existing code.

The general naming convention (with some small exceptions) is:

- ⟨*option key*⟩ `app`: works like ⟨*option key*⟩ but *app*ends its code to the existing code.

- ⟨*option key*⟩ `pre`: works like ⟨*option key*⟩ but *pre*pends its code to the existing code.

If the original ⟨*option key*⟩ is used (again), all code will be overwritten. Therefore, the order of the option key usage is crucial.

```

13.2 Box Content Additions

The following option keys extend the options given in Subsection 3.7 from page 41.

/tcb/before title app=⟨*code*⟩ (no default)
Appends the given ⟨*code*⟩ to `/tcb/before title`→P. 41 *after* the color and font settings and *before* the content of the title.

/tcb/before title pre=⟨*code*⟩ (no default)
Prepends the given ⟨*code*⟩ to `/tcb/before title`→P. 41 *after* the color and font settings and *before* the content of the title.

/tcb/after title app=⟨*code*⟩ (no default)
Appends the given ⟨*code*⟩ to `/tcb/after title`→P. 41 *after* the content of the title.

/tcb/after title pre=⟨*code*⟩ (no default)
Prepends the given ⟨*code*⟩ to `/tcb/after title`→P. 41 *after* the content of the title.

/tcb/before upper app=⟨*code*⟩ (no default)
Appends the given ⟨*code*⟩ to `/tcb/before upper`→P. 41 *after* the color and font settings and *before* the content of the upper part.

/tcb/before upper pre=⟨*code*⟩ (no default)
Prepends the given ⟨*code*⟩ to `/tcb/before upper`→P. 41 *after* the color and font settings and *before* the content of the upper part.

/tcb/after upper app=⟨*code*⟩ (no default)
Appends the given ⟨*code*⟩ to `/tcb/after upper`→P. 42 *after* the content of the upper part.

/tcb/after upper pre=⟨*code*⟩ (no default)
Prepends the given ⟨*code*⟩ to `/tcb/after upper`→P. 42 *after* the content of the upper part.

```
% \tcbuselibrary{theorems}
\tcbset{ams align,%  this sets 'before upper' and 'after upper'
  colback=yellow!10!white,colframe=red!50!black,
  before upper app={\frac{2}{\sqrt{2}}&=\sqrt{2}.\\},
  after upper pre={\\\sin\left(\frac{\pi}{2}\right)&=1.},
}

\begin{tcolorbox}
  \sum\limits_{n=1}^{\infty} \frac{1}{n} &= \infty.\\
  \int x^2 ~\text{d}x &= \frac13 x^3 + c.
\end{tcolorbox}
```

$$\frac{2}{\sqrt{2}} = \sqrt{2}. \tag{22}$$

$$\sum_{n=1}^{\infty} \frac{1}{n} = \infty. \tag{23}$$

$$\int x^2 \ \mathrm{d}x = \frac{1}{3}x^3 + c. \tag{24}$$

$$\sin\left(\frac{\pi}{2}\right) = 1. \tag{25}$$

/tcb/before lower app=⟨*code*⟩ (no default)
    Appends the given ⟨*code*⟩ to `/tcb/before lower`^{→P.42} *after* the color and font settings and *before* the content of the lower part.

/tcb/before lower pre=⟨*code*⟩ (no default)
    Prepends the given ⟨*code*⟩ to `/tcb/before lower`^{→P.42} *after* the color and font settings and *before* the content of the lower part.

/tcb/after lower app=⟨*code*⟩ (no default)
    Appends the given ⟨*code*⟩ to `/tcb/after lower`^{→P.42} *after* the content of the lower part.

/tcb/after lower pre=⟨*code*⟩ (no default)
    Prepends the given ⟨*code*⟩ to `/tcb/after lower`^{→P.42} *after* the content of the lower part.

13.3 Embedding into the Surroundings

The following option keys extend the options given in Subsection 3.11 from page 59.

> The 'hookable' versions are usable inside the document. In the preamble, they can only be used after explicit setting of `/tcb/before`^{→P.59} and `/tcb/after`^{→P.59} or by e.g. `/tcb/parskip`^{→P.59}.

/tcb/before app=⟨*code*⟩ (no default)
    Appends the given ⟨*code*⟩ to `/tcb/before`^{→P.59} before the colored box.

/tcb/before pre=⟨*code*⟩ (no default)
    Prepends the given ⟨*code*⟩ to `/tcb/before`^{→P.59} before the colored box.

/tcb/after app=⟨*code*⟩ (no default)
    Appends the given ⟨*code*⟩ to `/tcb/after`^{→P.59} after the colored box.

/tcb/after pre=⟨*code*⟩ (no default)
    Prepends the given ⟨*code*⟩ to `/tcb/after`^{→P.59} after the colored box.

```
\tcbset{colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[title=My title,before app={The box follows:\\[4pt]},
  after app={This is the end.}]
This is a \textbf{tcolorbox}.
\end{tcolorbox}
```

The box follows:

> **My title**
>
> This is a **tcolorbox**.

This is the end.

13.4 Overlays

The following option keys extend the options given in Subsection 3.8 from page 50.

/tcb/overlay app=⟨*graphical code*⟩ (no default)

Appends the given ⟨*graphical code*⟩ to /tcb/overlay$^{→P.50}$.

```
% \usetikzlibrary{patterns} % preamble
% \tcbuselibrary{skins} % preamble
\tcbset{frogbox/.style={enhanced,colback=green!10,colframe=green!65!black,
  enlarge top by=5.5mm,
  overlay={\foreach \x in {2cm,3.5cm} {
    \begin{scope}[shift={([xshift=\x]frame.north west)}]
      \path[draw=green!65!black,fill=green!10,line width=1mm] (0,0) arc (0:180:5mm);
      \path[fill=black] (-0.2,0) arc (0:180:1mm);
    \end{scope}}}]}}
\tcbset{ribbon/.style={overlay app={%
  \path[fill=blue!75!white,draw=blue,double=white!85!blue,
    preaction={opacity=0.6,fill=blue!75!white},
    line width=0.1mm,double distance=0.2mm,
    pattern=fivepointed stars,pattern color=white!75!blue]
    ([xshift=-0.2mm,yshift=-1.02cm]frame.north east)
    -- ++(-1,1) -- ++(-0.5,0) -- ++(1.5,-1.5) -- cycle;}}}

\begin{tcolorbox}[frogbox,title=My title]
This is a \textbf{tcolorbox}.
\end{tcolorbox}

\begin{tcolorbox}[frogbox,ribbon,title=My title]
This is a \textbf{tcolorbox}.\par
Here, we apply a second overlay.
\end{tcolorbox}
```

My title

This is a **tcolorbox**.

My title

This is a **tcolorbox**.
Here, we apply a second overlay.

/tcb/overlay pre=⟨*graphical code*⟩ (no default)

Prepends the given ⟨*graphical code*⟩ to /tcb/overlay$^{→P.50}$.

/tcb/overlay unbroken app=⟨*graphical code*⟩ (no default)

Appends the given ⟨*graphical code*⟩ to /tcb/overlay unbroken$^{→P.51}$.

/tcb/overlay unbroken pre=⟨*graphical code*⟩ (no default)

Prepends the given ⟨*graphical code*⟩ to /tcb/overlay unbroken$^{→P.51}$.

/tcb/overlay first app=⟨*graphical code*⟩ (no default)

Appends the given ⟨*graphical code*⟩ to /tcb/overlay first$^{→P.51}$.

/tcb/overlay first pre=⟨*graphical code*⟩ (no default)

Prepends the given ⟨*graphical code*⟩ to /tcb/overlay first$^{→P.51}$.
/tcb/overlay middle app=⟨*graphical code*⟩ (no default)

    Appends the given ⟨*graphical code*⟩ to `/tcb/overlay middle`^{→P. 51}.

/tcb/overlay middle pre=⟨*graphical code*⟩ (no default)

    Prepends the given ⟨*graphical code*⟩ to `/tcb/overlay middle`^{→P. 51}.

/tcb/overlay last app=⟨*graphical code*⟩ (no default)

    Appends the given ⟨*graphical code*⟩ to `/tcb/overlay last`^{→P. 51}.

/tcb/overlay last pre=⟨*graphical code*⟩ (no default)

    Prepends the given ⟨*graphical code*⟩ to `/tcb/overlay last`^{→P. 51}.

/tcb/overlay broken app=⟨*graphical code*⟩ (no default)

    Appends the given ⟨*graphical code*⟩ to `/tcb/overlay broken`^{→P. 51}.

/tcb/overlay broken pre=⟨*graphical code*⟩ (no default)

    Prepends the given ⟨*graphical code*⟩ to `/tcb/overlay broken`^{→P. 51}.

/tcb/overlay unbroken and first app=⟨*graphical code*⟩ (no default)

    Appends the given ⟨*graphical code*⟩ to `/tcb/overlay unbroken and first`^{→P. 51}.

/tcb/overlay unbroken and first pre=⟨*graphical code*⟩ (no default)

    Prepends the given ⟨*graphical code*⟩ to `/tcb/overlay unbroken and first`^{→P. 51}.

/tcb/overlay middle and last app=⟨*graphical code*⟩ (no default)

    Appends the given ⟨*graphical code*⟩ to `/tcb/overlay middle and last`^{→P. 51}.

/tcb/overlay middle and last pre=⟨*graphical code*⟩ (no default)

    Prepends the given ⟨*graphical code*⟩ to `/tcb/overlay middle and last`^{→P. 51}.

/tcb/overlay unbroken and last app=⟨*graphical code*⟩ (no default)

    Appends the given ⟨*graphical code*⟩ to `/tcb/overlay unbroken and last`^{→P. 51}.

/tcb/overlay unbroken and last pre=⟨*graphical code*⟩ (no default)

    Prepends the given ⟨*graphical code*⟩ to `/tcb/overlay unbroken and last`^{→P. 51}.

13.5 Watermarks

The following option keys extend the options given in Subsection 7.3 from page 106.

> Watermarks are special overlays. The ⬛LIB hooks library allows the combination of several watermarks and overlays.

/tcb/watermark text app=⟨*text*⟩ (no default)

Appends a /tcb/watermark text→P.106 to the colored box.

```
\tcbset{colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries}

\begin{tcolorbox}[enhanced,title=My title,watermark graphics=Basilica_5.png,
  watermark opacity=0.25,

/tcb/watermark text pre=⟨*text*⟩ (no default)

Prepends a /tcb/watermark text→P.106 to the colored box.

/tcb/watermark text app on=⟨*part*⟩ is ⟨*text*⟩ (no default)

Appends a /tcb/watermark text on→P.106 the named ⟨*part*⟩ of a break sequence.

/tcb/watermark text pre on=⟨*part*⟩ is ⟨*text*⟩ (no default)

Prepends a /tcb/watermark text on→P.106 the named ⟨*part*⟩ of a break sequence.

`/tcb/watermark graphics app`=⟨*file name*⟩   (no default)
　　Appends a [`/tcb/watermark graphics`](→P.107) referenced by ⟨*file name*⟩ to the colored box.

`/tcb/watermark graphics pre`=⟨*file name*⟩   (no default)
　　Prepends a [`/tcb/watermark graphics`](→P.107) referenced by ⟨*file name*⟩ to the colored box.

`/tcb/watermark graphics app on`=⟨*part*⟩ `is` ⟨*file name*⟩   (no default)
　　Appends a [`/tcb/watermark graphics on`](→P.107) the named ⟨*part*⟩ of a break sequence.
　　The picture is referenced by ⟨*file name*⟩.

`/tcb/watermark graphics pre on`=⟨*part*⟩ `is` ⟨*file name*⟩   (no default)
　　Prepends a [`/tcb/watermark graphics on`](→P.107) the named ⟨*part*⟩ of a break sequence.
　　The picture is referenced by ⟨*file name*⟩.

`/tcb/watermark tikz app`=⟨*graphical code*⟩   (no default)
　　Appends a [`/tcb/watermark tikz`](→P.108) with the given `tikz` ⟨*graphical code*⟩ to the colored
　　box.

`/tcb/watermark tikz pre`=⟨*graphical code*⟩   (no default)
　　Prepends a [`/tcb/watermark tikz`](→P.108) with the given `tikz` ⟨*graphical code*⟩ to the colored
　　box.

```
% \usepackage{tikz}
\tcbset{colback=red!5!white,colframe=red!75!black,fonttitle=\bfseries,

`/tcb/watermark tikz app on`=⟨*part*⟩ `is` ⟨*graphical code*⟩   (no default)
　　Appends a [`/tcb/watermark tikz on`](→P.108) the named ⟨*part*⟩ of a break sequence.

`/tcb/watermark tikz pre on`=⟨*part*⟩ `is` ⟨*graphical code*⟩   (no default)
　　Prepends a [`/tcb/watermark tikz on`](→P.108) the named ⟨*part*⟩ of a break sequence.

13.6 Underlays

The following option keys extend the options given in Section 7.8 on page 133. There are no `app` type keys since underlays are stackable by default.

`/tcb/underlay pre`=⟨*graphical code*⟩   (no default)
  Prepends the given ⟨*graphical code*⟩ to `/tcb/underlay`^{→P.133}.

`/tcb/underlay unbroken pre`=⟨*graphical code*⟩   (no default)
  Prepends the given ⟨*graphical code*⟩ to `/tcb/underlay unbroken`^{→P.134}.

`/tcb/underlay first pre`=⟨*graphical code*⟩   (no default)
  Prepends the given ⟨*graphical code*⟩ to `/tcb/underlay first`^{→P.134}.

`/tcb/underlay middle pre`=⟨*graphical code*⟩   (no default)
  Prepends the given ⟨*graphical code*⟩ to `/tcb/underlay middle`^{→P.134}.

`/tcb/underlay last pre`=⟨*graphical code*⟩   (no default)
  Prepends the given ⟨*graphical code*⟩ to `/tcb/underlay last`^{→P.134}.

`/tcb/underlay boxed title pre`=⟨*graphical code*⟩   (no default)
  Prepends the given ⟨*graphical code*⟩ to `/tcb/underlay boxed title`^{→P.134}.

`/tcb/underlay broken pre`=⟨*graphical code*⟩   (no default)
  Prepends the given ⟨*graphical code*⟩ to `/tcb/underlay broken`^{→P.134}.

`/tcb/underlay unbroken and first pre`=⟨*graphical code*⟩   (no default)
  Prepends the given ⟨*graphical code*⟩ to `/tcb/underlay unbroken and first`^{→P.134}.

`/tcb/underlay middle and last pre`=⟨*graphical code*⟩   (no default)
  Prepends the given ⟨*graphical code*⟩ to `/tcb/underlay middle and last`^{→P.134}.

`/tcb/underlay unbroken and last pre`=⟨*graphical code*⟩   (no default)
  Prepends the given ⟨*graphical code*⟩ to `/tcb/underlay unbroken and last`^{→P.134}.

13.7 Finishes

The following option keys extend the options given in Section 7.9 on page 135. There are no `app` type keys since finishes are stackable by default.

/tcb/finish pre=⟨*graphical code*⟩   (no default)
    Prepends the given ⟨*graphical code*⟩ to `/tcb/finish`^{→P. 135}.

/tcb/finish unbroken pre=⟨*graphical code*⟩   (no default)
    Prepends the given ⟨*graphical code*⟩ to `/tcb/finish unbroken`^{→P. 136}.

/tcb/finish first pre=⟨*graphical code*⟩   (no default)
    Prepends the given ⟨*graphical code*⟩ to `/tcb/finish first`^{→P. 136}.

/tcb/finish middle pre=⟨*graphical code*⟩   (no default)
    Prepends the given ⟨*graphical code*⟩ to `/tcb/finish middle`^{→P. 136}.

/tcb/finish last pre=⟨*graphical code*⟩   (no default)
    Prepends the given ⟨*graphical code*⟩ to `/tcb/finish last`^{→P. 136}.

/tcb/finish broken pre=⟨*graphical code*⟩   (no default)
    Prepends the given ⟨*graphical code*⟩ to `/tcb/finish broken`^{→P. 136}.

/tcb/finish unbroken and first pre=⟨*graphical code*⟩   (no default)
    Prepends the given ⟨*graphical code*⟩ to `/tcb/finish unbroken and first`^{→P. 136}.

/tcb/finish middle and last pre=⟨*graphical code*⟩   (no default)
    Prepends the given ⟨*graphical code*⟩ to `/tcb/finish middle and last`^{→P. 136}.

/tcb/finish unbroken and last pre=⟨*graphical code*⟩   (no default)
    Prepends the given ⟨*graphical code*⟩ to `/tcb/finish unbroken and last`^{→P. 136}.

13.8 Skin Code

The following option keys extend the options given in Subsection 6.2 from page 85.

/tcb/frame code app=⟨*graphical code*⟩   (no default)
    Appends the given ⟨*graphical code*⟩ to `/tcb/frame code`^{→P. 85}.

/tcb/frame code pre=⟨*graphical code*⟩   (no default)
    Prepends the given ⟨*graphical code*⟩ to `/tcb/frame code`^{→P. 85}.

/tcb/interior titled code app=⟨*graphical code*⟩   (no default)
    Appends the given ⟨*graphical code*⟩ to `/tcb/interior titled code`^{→P. 85}.

```
\begin{tcolorbox}[title=My title,enhanced,colframe=Navy,
  frame code app={\draw[yellow,line width=1cm] (
    frame.south west)--(frame.north east);},
  interior titled code app={\draw[red,line width=1cm]
    (frame.north west)--(frame.south east);},
  ]
\lipsum[1]
\end{tcolorbox}
```

My title

Lorem ipsum dolor sit amet, consectetuer adipiscing elit. Ut purus elit, vestibulum ut, plac-
erat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. Nam arcu libero, nonummy
eget, consectetuer id, vulputate a, magna. Donec vehicula augue eu neque. Pellentesque habi-
tant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Mauris ut leo.
Cras viverra metus rhoncus sem. Nulla et lectus vestibulum urna fringilla ultrices. Phasellus
eu tellus sit amet tortor gravida placerat. Integer sapien est, iaculis in, pretium quis, viverra
ac, nunc. Praesent eget sem vel leo ultrices bibendum. Aenean faucibus. Morbi dolor nulla,

orci sit amet orci dignissim rutrum.

/tcb/interior titled code pre=⟨*graphical code*⟩ (no default)
Prepends the given ⟨*graphical code*⟩ to **/tcb/interior titled code**[→ P. 85].

/tcb/interior code app=⟨*graphical code*⟩ (no default)
Appends the given ⟨*graphical code*⟩ to **/tcb/interior code**[→ P. 86].

/tcb/interior code pre=⟨*graphical code*⟩ (no default)
Prepends the given ⟨*graphical code*⟩ to **/tcb/interior code**[→ P. 86].

/tcb/segmentation code app=⟨*graphical code*⟩ (no default)
Appends the given ⟨*graphical code*⟩ to **/tcb/segmentation code**[→ P. 86].

/tcb/segmentation code pre=⟨*graphical code*⟩ (no default)
Prepends the given ⟨*graphical code*⟩ to **/tcb/segmentation code**[→ P. 86].

/tcb/title code app=⟨*graphical code*⟩ (no default)
Appends the given ⟨*graphical code*⟩ to **/tcb/title code**[→ P. 87].

/tcb/title code pre=⟨*graphical code*⟩ (no default)
Prepends the given ⟨*graphical code*⟩ to **/tcb/title code**[→ P. 87].

14 Library ▊ xparse

The library is loaded by a package option or inside the preamble by:

```
\tcbuselibrary{xparse}
```

This also loads the package xparse [10].

The purpose of this library is to give comfortable access to the powerful document command production with xparse for tcolorbox. See the xparse package documentation [10] for details about the argument ⟨specification⟩ used in this section.

14.1 Option Keys

/tcb/verbatim   (style, no value)

Sets options for a *verbatim* style `\tcbox`→P.11. Since the indented boxes may contain only very few words, the dimensions are made smaller and `/tcb/nobeforeafter`→P.59 and `/tcb/tcbox raise base`→P.71 are set.

```
\DeclareTotalTCBox{\myverb}{ v }{verbatim,
  colframe=red!75!black,colupper=blue}{#1}

\myverb{\textbf} is a \myverb{\LaTeX} command.
```

`\textbf` is a `\LaTeX` command.

/tcb/IfNoValueTF={⟨argument⟩}{⟨true options⟩}{⟨false options⟩}   (no default)

Wraps the `\IfNoValueTF` command of xparse for option setting. If the ⟨argument⟩ has no value, the ⟨true options⟩ are set. Otherwise, the ⟨false options⟩ are set.

```
\DeclareTColorBox{mybox}{ o }{colframe=red!75!black,
  IfNoValueTF={#1}{colback=red!5!white}{enhanced,interior style image=#1}}

\begin{mybox}
This is a tcolorbox.
\end{mybox}

\begin{mybox}[goldshade.png]
This is a tcolorbox.
\end{mybox}
```

This is a tcolorbox.

This is a tcolorbox.

/tcb/IfValueTF={⟨*argument*⟩}{⟨*true options*⟩}{⟨*false options*⟩}   (no default)

Wraps the **\IfValueTF** command of xparse for option setting. If the ⟨*argument*⟩ has a value, the ⟨*true options*⟩ are set. Otherwise, the ⟨*false options*⟩ are set.

```
\DeclareTColorBox{mybox}{ o }{colframe=red!75!black,colback=red!5!white,
  IfValueTF={#1}{title={\flqq #1\frqq},fonttitle=\bfseries}{}}

\begin{mybox}
This is a tcolorbox.
\end{mybox}

\begin{mybox}[My title]
This is a tcolorbox.
\end{mybox}
```

> This is a tcolorbox.

> **«My title»**
>
> This is a tcolorbox.

/tcb/IfBooleanTF={⟨*argument*⟩}{⟨*true options*⟩}{⟨*false options*⟩}   (no default)

Wraps the **\IfBooleanTF** command of xparse for option setting. If the ⟨*argument*⟩ is **\BooleanTue**, the ⟨*true options*⟩ are set. If the ⟨*argument*⟩ is **\BooleanFalse**, the ⟨*false options*⟩ are set.

```
\DeclareTColorBox{mybox}{ s }{colframe=red!75!black,
  IfBooleanTF={#1}{colback=yellow!50!red}{colback=red!5!white}}

\begin{mybox}
This is a tcolorbox.
\end{mybox}

\begin{mybox}*
This is a tcolorbox.
\end{mybox}
```

> This is a tcolorbox.

> This is a tcolorbox.

14.2 Producing `tcolorbox` Environments and Commands

\DeclareTColorBox[⟨*init options*⟩]{⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Creates a new environment ⟨*name*⟩ based on `tcolorbox`→P.9.

Basically, \DeclareTColorBox operates like \DeclareDocumentEnvironment. This means, the new environment ⟨*name*⟩ is constructed with the given argument ⟨*specification*⟩. The ⟨*options*⟩ are given to the underlying `tcolorbox`→P.9.

Note that `/tcb/savedelimiter`→P.18 is set to the given ⟨*name*⟩ automatically.

The ⟨*init options*⟩ allow setting up automatic numbering, see Section 4 from page 75.

The new environment is always created, irrespective of an already existing environment with the same name.

```
% counter from previous example
\DeclareTColorBox[use counter from=pabox]{mybox}{ O{red} m d"" O{} }
  {enhanced,colframe=#1!75!black,colback=#1!5!white,
   fonttitle=\bfseries,title={\thetcbcounter~#2},
   IfValueTF={#3}{watermark text={#3}}{},#4}

\begin{mybox}{My title}
This is a tcolorbox.
\end{mybox}

\begin{mybox}[blue]{My title}
This is a tcolorbox.
\end{mybox}

\begin{mybox}[green]{My title}"My Watermark"
This is a tcolorbox.
\end{mybox}

\begin{mybox}[yellow]{My title}[colbacktitle=yellow!50!white,coltitle=black]
This is a tcolorbox.
\end{mybox}

\begin{mybox}[purple]{My title}"All together"[coltitle=yellow]
This is a tcolorbox.
\end{mybox}
```

14.1 My title

This is a tcolorbox.

14.2 My title

This is a tcolorbox.

14.3 My title

This is a tcolorbox.   My Watermark

14.4 My title

This is a tcolorbox.

14.5 My title

This is a tcolorbox.   All together

\NewTColorBox[⟨*init options*⟩]{⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Operates like \DeclareTColorBox^{→P. 282}, but based on **\NewDocumentEnvironment** instead of **\DeclareDocumentEnvironment**. An error is issued if ⟨*name*⟩ has already been defined.

\RenewTColorBox[⟨*init options*⟩]{⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Operates like \DeclareTColorBox^{→P. 282}, but based on **\RenewDocumentEnvironment** instead of **\DeclareDocumentEnvironment**. An existing environment is redefined.

\ProvideTColorBox[⟨*init options*⟩]{⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Operates like \DeclareTColorBox^{→P. 282}, but based on **\ProvideDocumentEnvironment** instead of **\DeclareDocumentEnvironment**. The environment ⟨*name*⟩ is only created if it is not already defined.

\DeclareTotalTColorBox[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}{⟨*content*⟩}

Creates a new command \⟨*name*⟩ based on `tcolorbox`→P.9. In contrast to \DeclareTColorBox→P.282, also the ⟨*content*⟩ of the `tcolorbox` is specified.

Basically, **\DeclareTotalTColorBox** operates like **\DeclareDocumentCommand**. This means, the new command \⟨*name*⟩ is constructed with the given argument ⟨*specification*⟩. The ⟨*options*⟩ are given to the underlying `tcolorbox`→P.9 which is filled with the specified ⟨*content*⟩.

Note that `/tcb/savedelimiter`→P.18 is set to the given ⟨*name*⟩ automatically.

The ⟨*init options*⟩ allow setting up automatic numbering, see Section 4 from page 75.

The new command is always created, irrespective of an already existing command with the same name.

```
\DeclareTotalTColorBox{\diabox}{ O{} v m }
  { bicolor,nobeforeafter,equal height group=diabox,width=5.7cm,
    fonttitle=\bfseries\ttfamily,adjusted title={#2},center title,
    colframe=blue!20!black,leftupper=0mm,rightupper=0mm,colback=black!75!white,#1}
  { \tikz\path[fill zoom image={#2}] (0,0) rectangle (\linewidth,4cm);%
    \tcblower#3}

\diabox{blueshade.png}{Created with |GIMP|.\\\url{http://www.gimp.org}}
\diabox{goldshade.png}{Created with |GIMP|.\\\url{http://www.gimp.org}}
```

blueshade.png

Created with GIMP.
http://www.gimp.org

goldshade.png

Created with GIMP.
http://www.gimp.org

\NewTotalTColorBox[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}{⟨*content*⟩}

Operates like **\DeclareTotalTColorBox**, but based on **\NewDocumentCommand** instead of **\DeclareDocumentCommand**. An error is issued if \⟨*name*⟩ has already been defined.

\RenewTotalTColorBox[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}{⟨*content*⟩}

Operates like **\DeclareTotalTColorBox**, but based on **\RenewDocumentCommand** instead of **\DeclareDocumentCommand**. An existing command is redefined.

\ProvideTotalTColorBox[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}{⟨*content*⟩}

Operates like **\DeclareTotalTColorBox**, but based on **\ProvideDocumentCommand** instead of **\DeclareDocumentCommand**. The command \⟨*name*⟩ is only created if it is not already defined.

14.3   Producing `tcbox` Commands

\DeclareTCBox[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Creates a new command \⟨*name*⟩ based on **\tcbox**[→P.11]. Basically, **\DeclareTCBox** operates like **\DeclareDocumentCommand**. This means, the new command \⟨*name*⟩ is constructed with the given argument ⟨*specification*⟩. The ⟨*options*⟩ are given to the underlying **\tcbox**[→P.11].

Note that **/tcb/savedelimiter**[→P.18] is set to the given ⟨*name*⟩ automatically.

The ⟨*init options*⟩ allow setting up automatic numbering, see Section 4 from page 75.

The new command is always created, irrespective of an already existing command with the same name.

```
% counter from previous example
\DeclareTCBox[use counter from=pabox]{\mybox}{ s m s }
{ nobeforeafter,colback=red!5!white,colframe=red!75!black,
  title={#2 (Box \thetcbcounter)},fonttitle=\bfseries,
  IfBooleanTF={#1}{enhanced,drop shadow}{},
  IfBooleanTF={#3}{colbacktitle=red!50!white}{}  }

\mybox{Bird}{This is my first box.}
  \hfill
\mybox*{Tree}{This is my second box.}
  \par\bigskip
\mybox{Bike}*{This is my third box.}
  \hfill
\mybox*{City}*{This is my fourth box.}
```

Bird (Box 14.6)		**Tree (Box 14.7)**
This is my first box.		This is my second box.

Bike (Box 14.8)		**City (Box 14.9)**
This is my third box.		This is my fourth box.

\NewTCBox[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Operates like **\DeclareTCBox**, but based on **\NewDocumentCommand** instead of **\DeclareDocumentCommand**. An error is issued if \⟨*name*⟩ has already been defined.

\RenewTCBox[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Operates like **\DeclareTCBox**, but based on **\RenewDocumentCommand** instead of **\DeclareDocumentCommand**. An existing command is redefined.

\ProvideTCBox[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Operates like **\DeclareTCBox**, but based on **\ProvideDocumentCommand** instead of **\DeclareDocumentCommand**. The command \⟨*name*⟩ is only created if it is not already defined.

`\DeclareTotalTCBox``[⟨`*init options*`⟩]{\⟨`*name*`⟩}{⟨`*specification*`⟩}{⟨`*options*`⟩}{⟨`*content*`⟩}`

Creates a new command \⟨*name*⟩ based on `\tcbox`[→P.11]. In contrast to `\DeclareTCBox`[→P.285], also the ⟨*content*⟩ of the `tcbox` is specified.

Basically, `\DeclareTotalTCBox` operates like `\DeclareDocumentCommand`. This means, the new command \⟨*name*⟩ is constructed with the given argument ⟨*specification*⟩. The ⟨*options*⟩ are given to the underlying `\tcbox`[→P.11] which is filled with the specified ⟨*content*⟩.

Note that `/tcb/savedelimiter`[→P.18] is set to the given ⟨*name*⟩ automatically.

The ⟨*init options*⟩ allow setting up automatic numbering, see Section 4 from page 75.

The new command is always created, irrespective of an already existing command with the same name.

```
\DeclareTotalTCBox{\myverb}{ O{red} v O{} }
{ fontupper=\ttfamily,nobeforeafter,tcbox raise base,arc=0pt,outer arc=0pt,
  top=0pt,bottom=0pt,left=0mm,right=0mm,
  leftrule=0pt,rightrule=0pt,toprule=0.3mm,bottomrule=0.3mm,boxsep=0.5mm,
  colback=#1!10!white,colframe=#1!50!black,#3}{#2}

To set a word \textbf{bold} in \myverb{\LaTeX}, one uses
\myverb[green]{\textbf{bold}}. Alternatively, write
\myverb[yellow]{{\bfseries bold}}.
In \myverb[blue]{\LaTeX}[enhanced,fuzzy halo], other font settings are
done in the same way, e.\,g. \myverb{\textit}, \myverb{\itshape}\\
or \myverb[brown]{\texttt}, \myverb[brown]{\ttfamily}.
```

To set a word **bold** in `\LaTeX`, one uses `\textbf{bold}`. Alternatively, write `{\bfseries bold}`.
In `\LaTeX`, other font settings are done in the same way, e. g. `\textit`, `\itshape`
or `\texttt`, `\ttfamily`.

The next example uses `\lstinline` from the `listings` package to typeset the verbatim content.

```
% \usepackage{listings} or \tcbuselibrary{listings}
\DeclareTotalTCBox{\commandbox}{ s v }
{verbatim,colupper=white,colback=black!75!white,colframe=black}
{\IfBooleanTF{#1}{\textcolor{red}{\ttfamily\bfseries > }}{}%
  \lstinline[language=command.com,keywordstyle=\color{blue!35!white}\bfseries]^#2^}

\commandbox*{cd "My Documents"} changes to directory \commandbox{My Documents}.

\commandbox*{dir /A} lists the directory content.

\commandbox*{copy example.txt d:\target} copies \commandbox{example.txt} to
  \commandbox{d:\target}.
```

`> cd "My␣Documents"` changes to directory `My Documents`.
`> dir /A` lists the directory content.
`> copy example.txt d:\target` copies `example.txt` to `d:\target`.

\NewTotalTCBox[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}{⟨*content*⟩}

Operates like \DeclareTotalTCBox[→P.286], but based on **\NewDocumentCommand** instead of **\DeclareDocumentCommand**. An error is issued if \⟨*name*⟩ has already been defined.

\RenewTotalTCBox[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}{⟨*content*⟩}

Operates like \DeclareTotalTCBox[→P.286], but based on **\RenewDocumentCommand** instead of **\DeclareDocumentCommand**. An existing command is redefined.

\ProvideTotalTCBox[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}{⟨*content*⟩}

Operates like \DeclareTotalTCBox[→P.286], but based on **\ProvideDocumentCommand** instead of **\DeclareDocumentCommand**. The command \⟨*name*⟩ is only created if it is not already defined.

\tcboxverb[⟨*options*⟩]{⟨*verbatim box content*⟩}

Creates a colored box based on \tcbox[→P.11] which is fitted to the width of the given ⟨*verbatim box content*⟩. The underlying \tcbox[→P.11] is styled with /tcb/verbatim[→P.280] plus the given ⟨*options*⟩. The difference to \tcbox[→P.11] is that the ⟨*verbatim box content*⟩ is interpreted *verbatim*. Therefore, \tcboxverb acts similar to \verb.

```
\tcboxverb{\LaTeX}, \tcboxverb[colback=blue!10!white,colupper=blue]{\LaTeX},
\tcboxverb[blank,fuzzy halo]{\LaTeX}, \tcboxverb[beamer]{\LaTeX},
\tcboxverb[enhanced,skin=enhancedmiddle jigsaw,colframe=red]{\LaTeX}.
```

\LaTeX , \LaTeX , **\LaTeX,** \LaTeX , \LaTeX .

14.4 Producing `tcblisting` Environments

The following commands need the [LIB listings] library to be included.

\DeclareTCBListing[⟨*init options*⟩]{⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Creates a new environment ⟨*name*⟩ based on `tcblisting`^{→P.191}.

Basically, \DeclareTCBListing operates like \DeclareDocumentEnvironment. This means, the new environment ⟨*name*⟩ is constructed with the given argument ⟨*specification*⟩. The ⟨*options*⟩ are given to the underlying `tcblisting`^{→P.191}.

Note that `/tcb/savedelimiter`^{→P.18} is set to the given ⟨*name*⟩ automatically.

The ⟨*init options*⟩ allow setting up automatic numbering, see Section 4 from page 75.

The new environment is always created, irrespective of an already existing environment with the same name.

```
\DeclareTCBListing{mybox}{ s O{} m }{%
  colback=red!5!white,
  colframe=red!75!black,
  fonttitle=\bfseries,
  IfBooleanTF={#1}
    {listing side text}
    {text side listing},
  title=#3,#2}

\begin{mybox}{Listing Box}
This is my
\LaTeX\ box.
\end{mybox}
\bigskip

\begin{mybox}*{Listing Box}
This is my
\LaTeX\ box.
\end{mybox}
\bigskip

\begin{mybox}[colback=yellow]
  {Listing Box}
This is my
\LaTeX\ box.
\end{mybox}
```

> **Listing Box**
>
> This is my LaTeX box. | This is my \LaTeX\ box.

> **Listing Box**
>
> This is my \LaTeX\ box. | This is my LaTeX box.

> **Listing Box**
>
> This is my LaTeX box. | This is my \LaTeX\ box.

\NewTCBListing[⟨*init options*⟩]{⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Operates like \DeclareTCBListing, but based on \NewDocumentEnvironment instead of \DeclareDocumentEnvironment. An error is issued if ⟨*name*⟩ has already been defined.

\RenewTCBListing[⟨*init options*⟩]{⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Operates like \DeclareTCBListing, but based on \RenewDocumentEnvironment instead of \DeclareDocumentEnvironment. An existing environment is redefined.

\ProvideTCBListing[⟨*init options*⟩]{⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Operates like \DeclareTCBListing, but based on \ProvideDocumentEnvironment instead of \DeclareDocumentEnvironment. The environment ⟨*name*⟩ is only created if it is not already defined.

Caveats of using an environment ending with an optional argument

```
\DeclareTCBListing{mybox}{ O{} }{listing only,#1}

\begin{mybox}[colframe=red]
\good
\end{mybox}

\begin{mybox}[colframe=red]\good\end{mybox}

\begin{mybox}
\good
\end{mybox}

\begin{mybox} \good\end{mybox}

\begin{mybox}\bad!\end{mybox}

\begin{mybox}
[\good]
\end{mybox}

\begin{mybox} [\good]\end{mybox}

\begin{mybox}[\bad!]\end{mybox}
```

14.5 Producing `tcbinputlisting` Commands

> The following commands need the [LIB listings] library to be included.

\DeclareTCBInputListing[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Creates a new command \⟨*name*⟩ based on **\tcbinputlisting**[→P. 193]. Basically, \DeclareTCBInputListing operates like \DeclareDocumentCommand. This means, the new command \⟨*name*⟩ is constructed with the given argument ⟨*specification*⟩. The ⟨*options*⟩ are given to the underlying **\tcbinputlisting**[→P. 193].

The ⟨*init options*⟩ allow setting up automatic numbering, see Section 4 from page 75.

The new command is always created, irrespective of an already existing command with the same name.

```
% counter from previous example
\DeclareTCBInputListing[use counter from=pabox]{\mylisting}{ O{} O{red} m }{%
  listing file={#3},title=Listing~\thetcbcounter,
  colback=#2!5!white,colframe=#2!50!black,colbacktitle=#2!75!black,
  fonttitle=\bfseries,listing only,#1}

\mylisting[before upper=\textit{This is the included file content:}]
  [blue]{\jobname.tcbtemp}
```

Listing 14.10

This is the included file content:
```
% counter from previous example
\DeclareTCBInputListing[use counter from=pabox]{\mylisting}{ O{}
    O{red} m }{%
  listing file={#3},title=Listing~\thetcbcounter,
  colback=#2!5!white,colframe=#2!50!black,colbacktitle=#2!75!black,
  fonttitle=\bfseries,listing only,#1}

\mylisting[before upper=\textit{This is the included file content:}]
  [blue]{\jobname.tcbtemp}
```

\NewTCBInputListing[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Operates like **\DeclareTCBInputListing**, but based on \NewDocumentCommand instead of \DeclareDocumentCommand. An error is issued if \⟨*name*⟩ has already been defined.

\RenewTCBInputListing[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Operates like **\DeclareTCBInputListing**, but based on \RenewDocumentCommand instead of \DeclareDocumentCommand. An existing command is redefined.

\ProvideTCBInputListing[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Operates like **\DeclareTCBInputListing**, but based on \ProvideDocumentCommand instead of \DeclareDocumentCommand. The command \⟨*name*⟩ is only created if it is not already defined.

14.6 Producing `tboxfit` Commands

The following commands need the `LIB fitting` library to be included.

\DeclareTCBoxFit[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Creates a new command \⟨*name*⟩ based on **\tcboxfit**[→ P. 260]. Basically, **\DeclareTCBoxFit** operates like \DeclareDocumentCommand. This means, the new command \⟨*name*⟩ is constructed with the given argument ⟨*specification*⟩. The ⟨*options*⟩ are given to the underlying **\tcboxfit**[→ P. 260].

Note that **/tcb/savedelimiter**[→ P. 18] is set to the given ⟨*name*⟩ automatically.

The ⟨*init options*⟩ allow setting up automatic numbering, see Section 4 from page 75.

The new command is always created, irrespective of an already existing command with the same name.

```
% \usepackage{lipsum}

\DeclareTCBoxFit{\mybox}{ O{} m o }
 {colback=red!5!white,
  colframe=red!75!black,
  width=#2,height=#2/3*2,
  IfValueTF={#3}{height=#3}{},
  #1}

\mybox[colback=yellow]{5cm}%
  {\lipsum[2]}

\mybox[colback=yellow]{5cm}[4cm]{\lipsum[2]}
```

> Nam dui ligula, fringilla a, euismod sodales, sollicitudin vel, wisi. Morbi auctor lorem non justo. Nam lacus libero, pretium at, lobortis vitae, ultricies et, tellus. Donec aliquet, tortor sed accumsan bibendum, erat ligula aliquet magna, vitae ornare odio metus a mi. Morbi ac orci et nisl hendrerit mollis. Suspendisse ut massa. Cras nec ante. Pellentesque a nulla. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Aliquam tincidunt urna. Nulla ullamcorper vestibulum turpis. Pellentesque cursus luctus mauris.

> Nam dui ligula, fringilla a, euismod sodales, sollicitudin vel, wisi. Morbi auctor lorem non justo. Nam lacus libero, pretium at, lobortis vitae, ultricies et, tellus. Donec aliquet, tortor sed accumsan bibendum, erat ligula aliquet magna, vitae ornare odio metus a mi. Morbi ac orci et nisl hendrerit mollis. Suspendisse ut massa. Cras nec ante. Pellentesque a nulla. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Aliquam tincidunt urna. Nulla ullamcorper vestibulum turpis. Pellentesque cursus luctus mauris.

\NewTCBoxFit[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Operates like **\DeclareTCBoxFit**, but based on \NewDocumentCommand instead of \DeclareDocumentCommand. An error is issued if \⟨*name*⟩ has already been defined.

\RenewTCBoxFit[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Operates like **\DeclareTCBoxFit**, but based on \RenewDocumentCommand instead of \DeclareDocumentCommand. An existing command is redefined.

\ProvideTCBoxFit[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}

Operates like **\DeclareTCBoxFit**, but based on \ProvideDocumentCommand instead of \DeclareDocumentCommand. The command \⟨*name*⟩ is only created if it is not already defined.

\DeclareTotalTCBoxFit[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}{⟨*content*⟩}

Creates a new command \⟨*name*⟩ based on \tcboxfit[→ P. 260]. In contrast to \DeclareTCBoxFit[→ P. 291], also the ⟨*content*⟩ of the tcboxfit is specified.

Basically, \DeclareTotalTCBoxFit operates like \DeclareDocumentCommand. This means, the new command \⟨*name*⟩ is constructed with the given argument ⟨*specification*⟩. The ⟨*options*⟩ are given to the underlying \tcboxfit[→ P. 260] which is filled with the specified ⟨*content*⟩.

Note that /tcb/savedelimiter[→ P. 18] is set to the given ⟨*name*⟩ automatically.

The ⟨*init options*⟩ allow setting up automatic numbering, see Section 4 from page 75.

The new command is always created, irrespective of an already existing command with the same name.

```
% \usepackage{lipsum}

\DeclareTotalTCBoxFit{\multibox}{ O{} m O{10} m }
 {nobeforeafter,colback=red!5!white,colframe=red!75!black,width=#2,height=#2/3*2,
  valign=center,#1}
 { \foreach \n in {1,...,#3} { #4} }

\multibox{5cm}{I shall not repeat.}
\multibox[colframe=blue!75!white]{5cm}[20]{I shall not repeat.}\\
\multibox[colback=yellow,height=5cm]{14cm}[100]{I shall not repeat.}
```

\NewTotalTCBoxFit[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}{⟨*content*⟩}

Operates like \DeclareTotalTCBoxFit, but based on \NewDocumentCommand instead of \DeclareDocumentCommand. An error is issued if \⟨*name*⟩ has already been defined.

\RenewTotalTCBoxFit[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}{⟨*content*⟩}

Operates like \DeclareTotalTCBoxFit, but based on \RenewDocumentCommand instead of \DeclareDocumentCommand. An existing command is redefined.

\ProvideTotalTCBoxFit[⟨*init options*⟩]{\⟨*name*⟩}{⟨*specification*⟩}{⟨*options*⟩}{⟨*content*⟩}

Operates like \DeclareTotalTCBoxFit, but based on \ProvideDocumentCommand instead of \DeclareDocumentCommand. The command \⟨*name*⟩ is only created if it is not already defined.

15 Library ᴸᴵᴮ documentation

This library has the single purpose to support LaTeX package documentations like this one. Actually, the visual nature follows the approach from Till Tantau's `pgf` [19] documentation. Typically, this library is assumed to be used in conjunction with the class `ltxdoc` or alike.

The library is loaded by a package option or inside the preamble by:

```
\tcbuselibrary{documentation}
```

This also loads the library ᴸᴵᴮ listings, see Section 9 on page 190, the library ᴸᴵᴮ skins, see Section 7 on page 93, and a bunch of packages, namely `doc`, `pifont`, `marvosym`, `makeidx`, `refcount`, and `hyperref`.

> The package `makeidx` is loaded only, if `\printindex` is *not* already defined. Therefore, one can include an alternative to `makeidx` like `imakeidx` *before* the library `documentation` is used.

For UTF-8 support, load:

```
\tcbuselibrary{listingsutf8,documentation}
```

For `minted` [13] support, load:

```
\tcbuselibrary{documentation,minted}
\tcbset{listing engine=minted}
```

15.1 Macros of the Library

\begin{docCommand}[⟨*options*⟩]{⟨*name*⟩}{⟨*parameters*⟩}
 ⟨*command description*⟩
\end{docCommand}

Documents a LaTeX macro with given ⟨*name*⟩ where ⟨*name*⟩ is written without backslash. The given ⟨*options*⟩ are set with `\tcbset`[→P. 10]. This macro takes mandatory or optional ⟨*parameters*⟩. It is automatically indexed and can be referenced with `\refCom`[→P. 299]{⟨*name*⟩}.

```
\begin{docCommand}{foomakedocSubKey}{\marg{name}\marg{key path}}
  Creates a new environment \meta{name} based on \refEnv{docKey} for the
  documentation of keys with the given \meta{key path}.
\end{docCommand}
```

\foomakedocSubKey{⟨*name*⟩}{⟨*key path*⟩}
> Creates a new environment ⟨*name*⟩ based on docKey[→P. 294] for the documentation of keys with the given ⟨*key path*⟩.

```
\begin{docCommand}[color definition=blue]{foomakedocSubKey*}%
    {\marg{name}\marg{key path}}
  Creates a new environment \meta{name} based on \refEnv{docKey} for the
  documentation of keys with the given \meta{key path}.
\end{docCommand}
```

\foomakedocSubKey*{⟨*name*⟩}{⟨*key path*⟩}
> Creates a new environment ⟨*name*⟩ based on docKey[→P. 294] for the documentation of keys with the given ⟨*key path*⟩.

\begin{docCommand*}[⟨*options*⟩]{⟨*name*⟩}{⟨*parameters*⟩}
⟨*command description*⟩
\end{docCommand*}

Identical to docCommand^{→P.293}, but without index entry.

\begin{docEnvironment}[⟨*options*⟩]{⟨*name*⟩}{⟨*parameters*⟩}
⟨*environment description*⟩
\end{docEnvironment}

Documents a LaTeX environment with given ⟨*name*⟩. The given ⟨*options*⟩ are set with \tcbset^{→P.10}. This environment takes mandatory or optional ⟨*parameters*⟩. It is automatically indexed and can be referenced with \refEnv^{→P.299}{⟨*name*⟩}.

```
\begin{docEnvironment}{foocolorbox}{\oarg{options}}
  This is the main environment to create an accentuated colored text box with
  rounded corners and, optionally, two parts.
\end{docEnvironment}
```

\begin{foocolorbox}[⟨*options*⟩]
  ⟨*environment content*⟩
\end{foocolorbox}

> This is the main environment to create an accentuated colored text box with rounded corners and, optionally, two parts.

```
\begin{docEnvironment}%
    [doclang/environment content=My content text]%
    {foocolorbox*}{\oarg{options}}
  This is the main environment to create an accentuated colored text box with
  rounded corners and, optionally, two parts.
\end{docEnvironment}
```

\begin{foocolorbox*}[⟨*options*⟩]
  ⟨*My content text*⟩
\end{foocolorbox*}

> This is the main environment to create an accentuated colored text box with rounded corners and, optionally, two parts.

\begin{docEnvironment*}[⟨*options*⟩]{⟨*name*⟩}{⟨*parameters*⟩}
⟨*environment description*⟩
\end{docEnvironment*}

Identical to docEnvironment, but without index entry.

\begin{docKey}[⟨*key path*⟩]{⟨*name*⟩}{⟨*parameters*⟩}{⟨*description*⟩}
⟨*key description*⟩
\end{docKey}

Documents a key with given ⟨*name*⟩ and an optional ⟨*key path*⟩. This key takes mandatory or optional ⟨*parameters*⟩ as value with a short ⟨*description*⟩. It is automatically indexed and can be referenced with \refKey^{→P.300}{⟨*name*⟩}.

```
\begin{docKey}[foo]{footitle}{=\meta{text}}{no default, initially empty}
  Creates a heading line with \meta{text} as content.
\end{docKey}
```

/foo/footitle=⟨*text*⟩   (no default, initially empty)
> Creates a heading line with ⟨*text*⟩ as content.

\begin{docKey*}[⟨*key path*⟩]{⟨*name*⟩}{⟨*parameters*⟩}{⟨*description*⟩}
 ⟨*key description*⟩
\end{docKey*}

Identical to docKey[→P. 294], but without index entry.

\docValue{⟨*name*⟩}

Documents a value with given ⟨*name*⟩. Typically, this is a value for a key. This value is automatically indexed.

> A feasible value for **\refKey**{/foo/footitle} is \docValue{foovalue}.
>
> A feasible value for /foo/footitle[→P. 294] is **foovalue**.

\docValue*{⟨*name*⟩}

Identical to \docValue, but without index entry.

\docAuxCommand{⟨*name*⟩}

Documents an auxiliary or minor LATEX macro with given ⟨*name*⟩ where ⟨*name*⟩ is written without backslash. This macro is automatically indexed.

> The macro **\docAuxCommand**{fooaux} holds some interesting data.
>
> The macro **\fooaux** holds some interesting data.

\docAuxCommand*{⟨*name*⟩}

Identical to \docAuxCommand, but without index entry.

\docAuxEnvironment{⟨*name*⟩}

Documents an auxiliary or minor LATEX environment with given ⟨*name*⟩. This macro is automatically indexed.

> The environment **\docAuxEnvironment**{fooauxenv} holds some interesting data.
>
> The environment **fooauxenv** holds some interesting data.

\docAuxEnvironment*[⟨*key path*⟩]{⟨*name*⟩}

Identical to \docAuxEnvironment, but without index entry.

\docAuxKey[⟨*key path*⟩]{⟨*name*⟩}

Documents an auxiliary key with given ⟨*name*⟩ and an optional ⟨*key path*⟩. It is automatically indexed.

> The key **\docAuxKey**[foo]{fooaux} holds some interesting data.
>
> The key **/foo/fooaux** holds some interesting data.

\docAuxKey*[⟨*key path*⟩]{⟨*name*⟩}

Identical to \docAuxKey, but without index entry.

\docColor{⟨*name*⟩}

Documents a color with given ⟨*name*⟩. The color is automatically indexed.

```
The color \docColor{foocolor} is available.
```

The color **foocolor** is available.

\docColor*{⟨*name*⟩}

Identical to \docColor, but without index entry.

\cs{⟨*name*⟩}

Macro from ltxdoc [3] to typeset a command word ⟨*name*⟩ where the backslash is prefixed. The library overwrites the original macro.

```
This is a \cs{foocommand}.
```

This is a \foocommand.

\meta{⟨*text*⟩}

Macro from doc [8] to typeset a meta ⟨*text*⟩. The library overwrites the original macro.

```
This is a \meta{text}.
```

This is a ⟨*text*⟩.

\marg{⟨*text*⟩}

Macro from ltxdoc [3] to typeset a ⟨*text*⟩ with curly brackets as a mandatory argument. The library overwrites the original macro.

```
This is a mandatory \marg{argument}.
```

This is a mandatory {⟨*argument*⟩}.

\oarg{⟨*text*⟩}

Macro from ltxdoc [3] to typeset a ⟨*text*⟩ with square brackets as an optional argument. The library overwrites the original macro.

```
This is an optional \oarg{argument}.
```

This is an optional [⟨*argument*⟩].

\brackets{⟨*text*⟩}

Sets the given ⟨*text*⟩ with curly brackets.

```
Here we use \brackets{some text}.
```

Here we use {some text}.

```
\begin{dispExample}
 ⟨environment content⟩
\end{dispExample}
```

Creates a colored box based on a `tcolorbox`^{→P. 9}. It displays the environment content as source code in the upper part and as compiled text in the lower part of the box. The appearance is controlled by `/tcb/documentation listing style`^{→P. 301} and the style `/tcb/docexample`^{→P. 301}. It may be changed by redefining this style.

```
\begin{dispExample}
This is a \LaTeX\ example.
\end{dispExample}
```

```
This is a \LaTeX\ example.
```

This is a LaTeX example.

```
\begin{dispExample*}{⟨options⟩}
 ⟨environment content⟩
\end{dispExample*}
```

The starred version of `dispExample` takes `tcolorbox`^{→P. 9} ⟨options⟩ as parameter. These ⟨options⟩ are executed after `/tcb/docexample`^{→P. 301}.

```
\begin{dispExample*}{sidebyside}
This is a \LaTeX\ example.
\end{dispExample*}
```

```
This is a \LaTeX\ example.                    This is a LaTeX example.
```

`\begin{`**`dispListing`**`}`
 ⟨*environment content*⟩
`\end{`**`dispListing`**`}`

> Creates a colored box based on a `tcolorbox`[→P.9]. It displays the environment content as source code. The appearance is controlled by `/tcb/documentation listing style`[→P.301] and the style `/tcb/docexample`[→P.301]. It may be changed by redefining this style.

```
\begin{dispListing}
This is a \LaTeX\ example.
\end{dispListing}
```

> This is a \LaTeX\ example.

`\begin{`**`dispListing*`**`}{`⟨*options*⟩`}`
 ⟨*environment content*⟩
`\end{`**`dispListing*`**`}`

> The starred version of `dispListing` takes `tcolorbox`[→P.9] ⟨*options*⟩ as parameter. These ⟨*options*⟩ are executed after `/tcb/docexample`[→P.301].

```
\begin{dispListing*}{title=My listing}
This is a \LaTeX\ example.
\end{dispListing*}
```

> My listing
>
> This is a \LaTeX\ example.

`\begin{`**`absquote`**`}`
 ⟨*environment content*⟩
`\end{`**`absquote`**`}`

> Used to typeset an abstract as quoted and small text.

```
\begin{absquote}
|tcolorbox| provides an environment for colored and framed text boxes with a
heading line. Optionally, such a box can be split in an upper and a lower part.
\end{absquote}
```

> **tcolorbox** provides an environment for colored and framed text boxes with a heading line. Optionally, such a box can be split in an upper and a lower part.

\tcbmakedocSubKey{⟨*name*⟩}{⟨*key path*⟩}

Creates a new environment ⟨*name*⟩ based on docKey^{→P.294} for the documentation of keys with the given ⟨*key path*⟩ as default. The new environment ⟨*name*⟩ takes the same parameters as docKey^{→P.294} itself. A second starred environment ⟨*name*⟩ is also created, which is identical to ⟨*name*⟩ but without index entry.

```
\tcbmakedocSubKey{docFooKey}{foo}

\begin{docFooKey}{foodummy}{=\meta{nothing}}{no default, initially empty}
Some key.
\end{docFooKey}

\begin{docFooKey*}{foo another dummy}{=\meta{nothing}}{no default, initially empty}
Some key (not indexed).
\end{docFooKey*}
```

/foo/foodummy=⟨*nothing*⟩   (no default, initially empty)
    Some key.
/foo/foo another dummy=⟨*nothing*⟩   (no default, initially empty)
    Some key (not indexed).

\refCom{⟨*name*⟩}

References a documented LATEX macro with given ⟨*name*⟩ where ⟨*name*⟩ is written without backslash. The page reference is suppressed if it links to the same page.

```
We have created \refCom{foomakedocSubKey} as an example.
```

We have created \foomakedocSubKey^{→P.293} as an example.

\refCom*{⟨*name*⟩}

References a documented LATEX macro with given ⟨*name*⟩ where ⟨*name*⟩ is written without backslash. There is no page reference.

```
We have created \refCom*{foomakedocSubKey} as an example.
```

We have created \foomakedocSubKey as an example.

\refEnv{⟨*name*⟩}

References a documented LATEX environment with given ⟨*name*⟩. The page reference is suppressed if it links to the same page.

```
We have created \refEnv{foocolorbox} as an example.
```

We have created foocolorbox^{→P.294} as an example.

\refEnv*{⟨*name*⟩}

References a documented LATEX environment with given ⟨*name*⟩. There is no page reference.

```
We have created \refEnv*{foocolorbox} as an example.
```

We have created foocolorbox as an example.

\refKey{⟨*name*⟩}

References a documented key with given ⟨*name*⟩ where ⟨*name*⟩ is the full path name of the key. The page reference is suppressed if it links to the same page.

```
We have created \refKey{/foo/footitle} as an example.
```

We have created /foo/footitle^{→ P. 294} as an example.

\refKey*{⟨*name*⟩}

References a documented key with given ⟨*name*⟩ where ⟨*name*⟩ is the full path name of the key. There is no page reference.

```
We have created \refKey*{/foo/footitle} as an example.
```

We have created /foo/footitle as an example.

\refAux{⟨*name*⟩}

References some auxiliary environment, key, value, or color. The hyperlink color is used, but there is no real link.

```
Some pages back, one can see \refAux{/foo/footitle} as an example.
```

Some pages back, one can see /foo/footitle as an example.

\refAuxcs{⟨*name*⟩}

References some auxiliary macro ⟨*name*⟩ where ⟨*name*⟩ is written without backslash. The hyperlink color is used, but there is no real link.

```
Some pages back, one can see \refAuxcs{fooaux} as an example.
```

Some pages back, one can see \fooaux as an example.

\colDef{⟨*text*⟩}

Sets ⟨*text*⟩ with the command color, see /tcb/color command^{→ P. 301}.

```
This is my \colDef{text}.
```

This is my text.

\colOpt{⟨*text*⟩}

Sets ⟨*text*⟩ with the option color, see /tcb/color option^{→ P. 301}.

```
This is my \colOpt{text}.
```

This is my text.

15.2 Option Keys of the Library

/tcb/docexample (style, no value)

Sets the style for dispExample^{→P.297} and dispListing^{→P.298} with the colors ExampleBack and ExampleFrame. To change the appearance of the examples, this style can be redefined.

/tcb/documentation listing options=⟨*key list*⟩ (no default, initially style=tcbdocumentation)

Sets the options from the package listings [6]. They are used inside dispExample^{→P.297} and dispListing^{→P.298} to typeset the listings. Note that this is not identical to the key /tcb/listing options^{→P.197} which is used for 'normal' listings.
Used for /tcb/listing engine^{→P.202}=listings only.

/tcb/documentation listing style=⟨*listing style*⟩ (no default, initially tcbdocumentation)

Abbreviation for documentation listing options={style=...}. This key sets a ⟨*style*⟩ for the listings package, see [6]. Note that this is not identical to the key /tcb/listing style^{→P.197} which is used for 'normal' listings.
Used for /tcb/listing engine^{→P.202}=listings only.

/tcb/documentation minted style=⟨*key list*⟩ (no default, initially unset)

Sets a ⟨*style*⟩ known to Pygments [11] for the package minted [13], if used. Note that this is not identical to the key /tcb/minted style^{→P.201} which is used for 'normal' listings.
Used for /tcb/listing engine^{→P.202}=minted only.

/tcb/documentation minted options=⟨*minted style*⟩ (no default, initially tabsize=2,fontsize=\small)

Sets the options from the package minted [13] which are used during typesetting of the listing, if used. Note that this is not identical to the key /tcb/minted options^{→P.200} which is used for 'normal' listings.
Used for /tcb/listing engine^{→P.202}=minted only.

/tcb/color command=⟨*color*⟩ (no default, initially Definition)

Sets the highlight color used by macro definitions.

/tcb/color environment=⟨*color*⟩ (no default, initially Definition)

Sets the highlight color used by environment definitions.

/tcb/color key=⟨*color*⟩ (no default, initially Definition)

Sets the highlight color used by key definitions.

/tcb/color value=⟨*color*⟩ (no default, initially Definition)

Sets the highlight color used by value definitions.

/tcb/color color=⟨*color*⟩ (no default, initially Definition)

Sets the highlight color used by color definitions.

/tcb/color definition=⟨*color*⟩ (no default, initially Definition)

Sets the highlight color for /tcb/color command, /tcb/color environment, /tcb/color key, /tcb/color value, and /tcb/color color.

/tcb/color option=⟨*color*⟩ (no default, initially Option)

Sets the color used for optional arguments.

/tcb/color hyperlink=⟨*color*⟩ (no default, initially Hyperlink)

Sets the color for all hyper-links, i. e. all internal and external links.

/tcb/before example=⟨*macros*⟩ (no default, initially \par\smallskip)

Sets the ⟨*macros*⟩ which are executed before dispExample^{→P.297} and dispListing^{→P.298} additional to /tcb/before^{→P.59}.

/tcb/after example=⟨*macros*⟩ (no default, initially empty)
Sets the ⟨*macros*⟩ which are executed after `dispExample`[→P. 297] and `dispListing`[→P. 298]
additional to `/tcb/after`[→P. 59].

/tcb/index format=⟨*format*⟩ (no default, initially `pgf`)
Determines the basic ⟨*format*⟩ of the generated index. Feasible values are:
- **pgfsection**: The index is formatted like in the `pgf` documentation (as a section).
- **pgfchapter**: The index is formatted like in the `pgf` documentation (as a chapter).
- **pgf**: Alias for `pgfsection`.
- **doc**: The index is assumed to be formatted by `doc` or `ltxdoc`. The usage of `makeindex`
  with `-s gind.ist` is assumed. The package `hypdoc` has to be loaded *before* `tcolorbox`.
- **off**: The index is not formatted by `tcolorbox`.

/tcb/index actual=⟨*character*⟩ (no default, initially `@`)
Sets the character for 'actual' in automatic indexing.

/tcb/index quote=⟨*character*⟩ (no default, initially `"`)
Sets the character for 'quote' in automatic indexing.

/tcb/index level=⟨*character*⟩ (no default, initially `!`)
Sets the character for 'level' in automatic indexing.

/tcb/index default settings (style, no value)
Sets the `makeindex` default values for `/tcb/index actual`, `/tcb/index quote`, and
`/tcb/index level`.

/tcb/index german settings (style, no value)
Sets the `makeindex` values recommended for German language texts. This is identical to
setting the following:

```
\tcbset{index actual={=},index quote={!},index level={>}}
```

/tcb/index annotate=true|false (default `true`, initially `true`)
If set to `true`, the index entries are annotated with short descriptions given by
`/tcb/doclang/environment`[→P. 303], `/tcb/doclang/key`[→P. 303], and others.

/tcb/index colorize=true|false (default `true`, initially `false`)
If set to `true`, the index entries colorized according to the color settings given by `/tcb/color`
`environment`[→P. 301], `/tcb/color key`[→P. 301], and others.

The following keys are provided for language specific settings. The English language is predefined.

/tcb/english language (style, no value)

Sets all language specific settings to English.

/tcb/doclang/color=⟨*text*⟩ (no default, initially `color`)

Text used in the index for colors.

/tcb/doclang/colors=⟨*text*⟩ (no default, initially `Colors`)

Heading text in the index for colors.

/tcb/doclang/environment content=⟨*text*⟩ (no default, initially `environment content`)

Text used in docEnvironment[→ P. 294].

/tcb/doclang/environment=⟨*text*⟩ (no default, initially `environment`)

Text used in the index for environments.

/tcb/doclang/environments=⟨*text*⟩ (no default, initially `Environments`)

Heading text in the index for environments.

/tcb/doclang/key=⟨*text*⟩ (no default, initially `key`)

Text used in the index for keys.

/tcb/doclang/keys=⟨*text*⟩ (no default, initially `Keys`)

Heading text used in the index for keys.

/tcb/doclang/value=⟨*text*⟩ (no default, initially `value`)

Text used in the index for values.

/tcb/doclang/values=⟨*text*⟩ (no default, initially `Values`)

Heading text in the index for values.

/tcb/doclang/index=⟨*text*⟩ (no default, initially `Index`)

Heading text for the index.

/tcb/doclang/pageshort=⟨*text*⟩ (no default, initially `P.`)

Short text for page references.

/tcb/doc left=⟨*length*⟩ (no default, initially `2em`)

Sets the left hand offset of the documentation texts from `docCommand`[→P. 293], `docEnvironment`[→P. 294], `docKey`[→P. 294], etc, to ⟨*length*⟩.

```
\begin{docCommand*}[doc left=2cm,doc left indent=-2cm]{myCommandA}{\marg{argment}}
  This is the documentation of \refCom{myCommandA} which takes one \meta{argument}.
  \refCom{myCommandA} does some funny things with its \meta{argument}.
\end{docCommand*}
```

`\myCommandA{`⟨*argment*⟩`}`
> This is the documentation of `\myCommandA` which takes one ⟨*argument*⟩. `\myCommandA` does some funny things with its ⟨*argument*⟩.

/tcb/doc right=⟨*length*⟩ (no default, initially `0em`)

Sets the right hand offset of the documentation texts from `docCommand`[→P. 293], `docEnvironment`[→P. 294], `docKey`[→P. 294], etc, to ⟨*length*⟩.

```
\begin{docCommand*}[doc right=2cm]{myCommandB}{\marg{argment}}
  This is the documentation of \refCom{myCommandB} which takes one \meta{argument}.
  \refCom{myCommandB} does some funny things with its \meta{argument}.
\end{docCommand*}
```

`\myCommandB{`⟨*argment*⟩`}`
> This is the documentation of `\myCommandB` which takes one ⟨*argument*⟩. `\myCommandB` does some funny things with its ⟨*argument*⟩.

/tcb/doc left indent=⟨*length*⟩ (no default, initially `-2em`)

Sets the left hand indent of documentation heads from `docCommand`[→P. 293], `docEnvironment`[→P. 294], `docKey`[→P. 294], etc, to ⟨*length*⟩.

```
\begin{docCommand*}[doc left indent=2cm]{myCommandC}{\marg{argment}}
  This is the documentation of \refCom{myCommandC} which takes one \meta{argument}.
  \refCom{myCommandC} does some funny things with its \meta{argument}.
\end{docCommand*}
```

> `\myCommandC{`⟨*argment*⟩`}`
> This is the documentation of `\myCommandC` which takes one ⟨*argument*⟩. `\myCommandC` does some funny things with its ⟨*argument*⟩.

/tcb/doc right indent=⟨*length*⟩ (no default, initially `0pt`)

Sets the right hand indent of documentation heads from `docCommand`[→P. 293], `docEnvironment`[→P. 294], `docKey`[→P. 294], etc, to ⟨*length*⟩.

```
\begin{docCommand*}[doc right indent=-10mm,doc right=10mm,
    doc description=test value]{myCommandD}{\marg{argment}}
  This is the documentation of \refCom{myCommandD} which takes one \meta{argument}.
  \refCom{myCommandD} does some funny things with its \meta{argument}.
\end{docCommand*}
```

`\myCommandD{`⟨*argment*⟩`}` (test value)
> This is the documentation of `\myCommandD` which takes one ⟨*argument*⟩. `\myCommandD` does some funny things with its ⟨*argument*⟩.

The head lines of the main documentation environments `docCommand`[→P. 293], `docEnvironment`[→P. 294], `docKey`[→P. 294], etc, are set inside `tcolorbox`es. Options to these `tcolorbox`es can be given using the following keys.

/tcb/doc head command=⟨*options*⟩   (no default, initially empty)
Sets ⟨*options*⟩ for the head line of `docCommand`[→P. 293] and `docCommand*`[→P. 294].

```
\tcbset{doc head command={interior style={fill,left color=red!20!white,
  right color=blue!20!white}}}

\begin{docCommand*}{myCommandE}{\marg{argment}}
  This is the documentation of \refCom{myCommandE} which takes one \meta{argument}.
  \refCom{myCommandE} does some funny things with its \meta{argument}.
\end{docCommand*}
```

\myCommandE{⟨*argment*⟩}
> This is the documentation of \myCommandE which takes one ⟨*argument*⟩. \myCommandE does some funny things with its ⟨*argument*⟩.

/tcb/doc head environment=⟨*options*⟩   (no default, initially empty)
Sets ⟨*options*⟩ for the head line of `docEnvironment`[→P. 294] and `docEnvironment*`[→P. 294].

```
\tcbset{doc head environment={beamer,boxsep=2pt,arc=2pt,colback=green!20!white,
  after=\par\smallskip}}

\begin{docEnvironment*}{myEnvironment}{\marg{argment}}
  This is the documentation of \refEnv{myEnvironment} which
  takes one \meta{argument}.
\end{docEnvironment*}
```

\begin{myEnvironment}{⟨*argment*⟩}
  ⟨*environment content*⟩
\end{myEnvironment}
> This is the documentation of myEnvironment which takes one ⟨*argument*⟩.

/tcb/doc head key=⟨*options*⟩   (no default, initially empty)
Sets ⟨*options*⟩ for the head line of `docKey`[→P. 294] and `docKey*`[→P. 295].

```
\tcbset{doc head key={boxsep=4pt,arc=4pt,boxrule=0.6pt,
  frame style=fill,interior style=fill,colframe=green!50!black}}

\begin{docKey*}{/foo/myKey}{}{no value}
  This is the documentation of \refKey{/foo/myKey}.
\end{docKey*}
```

/foo/myKey   (no value)
> This is the documentation of /foo/myKey.

/tcb/doc head=⟨*options*⟩   (no default, initially empty)
Shortcut for setting the same ⟨*options*⟩ for `/tcb/doc head command`, `/tcb/doc head environment`, and `/tcb/doc head key`.

/tcb/doc description=⟨*text*⟩   (no default, initially empty)

Sets a (short!) additional description ⟨*text*⟩ for docCommand^→P.293 or docEnvironment^→P.294. Such a description is mandatory for docKey^→P.294.

```
\begin{docCommand*}[doc description=my description]{myCommandF}{\marg{argment}}
  This is the documentation of \refCom{myCommandF} which takes one \meta{argument}.
  \refCom{myCommandF} does some funny things with its \meta{argument}.
\end{docCommand*}
```

\myCommandF{⟨*argment*⟩}   (my description)

This is the documentation of \myCommandF which takes one ⟨*argument*⟩. \myCommandF does some funny things with its ⟨*argument*⟩.

> Note that the description ⟨*text*⟩ may overlap with the text on the left hand side if too long. Linebreaks can be used inside the ⟨*text*⟩.

/tcb/doc into index=true|false   (default true, initially true)
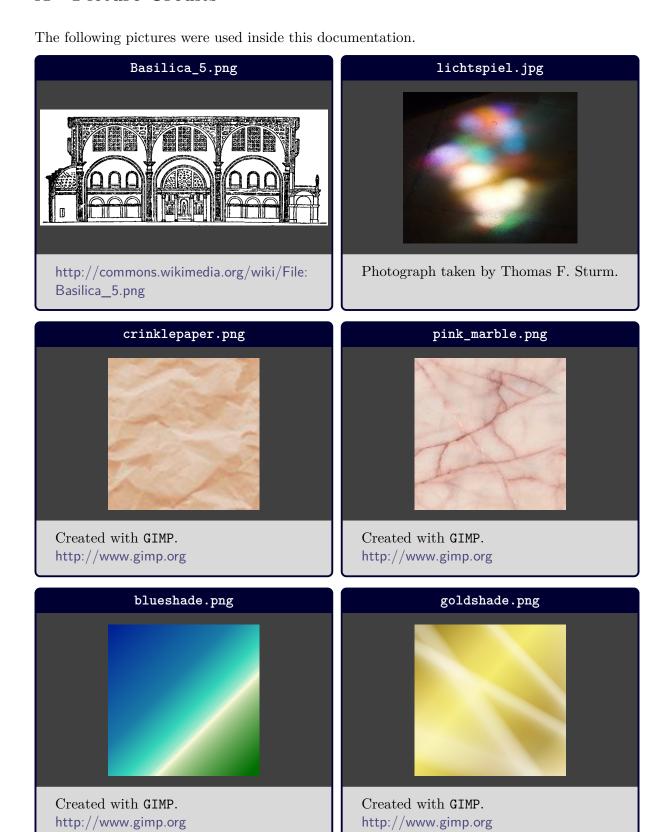

If set to false, no index entries are written for the main documentation environments. The same effect is achieved by using e.g. docCommand*^→P.294 instead of docCommand^→P.293.

15.3 Predefined Colors of the Library

The following colors are predefined. They are used as default colors in some library commands.

Option ▊ , **Definition** ▊ , **ExampleFrame** ▊ , **ExampleBack** ▢ , **Hyperlink** ▊ .
